NOTICE.

In ordering from this Catalogue the number of the articles should be given, also size or other description of the articles wanted.

To firms of known responsibility we will sell on 30 days' time.

Firms who have not dealt with us heretofore will confer a favor by sending references or remittance with first order.

If goods are ordered C. O. D., a remittance of Five Dollars must accompany the order.

The prices in this catalogue include all necessary packing or boxes, except for export or where very bulky or heavy goods require special packing.

On Surveying Instruments sent by express C. O. D. we will allow three days' examination.

Small packages will be sent by parcel post, for which postage will be added to the bill. We insure all mail packages free of charge.

All prices subject to change without notice.

All goods listed in this Catalogue are guaranteed to be exactly as represented. Should it happen that any article is not satisfactory, same will be promptly replaced. It has always been our policy to satisfy our customers to the fullest extent and thereby maintain the reputation we have established during the past thirty-two years.

Prices in this issue supersede all previous editions.

KOLESCH & CO.

27 Reynolds' Bristol Boards, smooth surface, 4-ply:

Cap	12½ x 15¼.....	per doz. \$1.60
Demy	14⅝ x 18¼.....	per doz. 2.45
Medium	16½ x 20¾.....	per doz. 3.35
Royal	18¾ x 22¾.....	per doz. 4.25
Imperial	21½ x 28¾.....	per doz. 8.15

Samples of any of above sent on application. Complete sample book, 10c.

Patent Office Blanks and Mounting Boards.

42
&
43

46

Patent Office Blanks, printed with border as prescribed by U. S. Patent Office:

		Per gross.	Per doz.	Per sheet
42	10 x 15 on 2 ply Reynolds' Bristol Board..	\$11.00....	\$1.10....	\$.10
43	10 x 15 on 3 ply Reynolds' Bristol Board..	14.50....	1.45....	.15

Patent Office Blanks, printed with border as prescribed by U. S. Patent Office, with an additional faint cutting line at 10 x 15 inches.

This gives a margin useful for inserting thumb tacks, memorandums, testing ruling pens, etc.:

		Per gross.	Per doz.	Per sheet
44	11 x 15 on 2 ply Reynolds' Bristol Board..	\$12.00....	\$1.20....	\$.12
45	11 x 15 on 3 ply Reynolds' Bristol Board..	15.50....	1.55....	.17

46 Trade Mark Bristol Boards, printed with lettering and ruling as prescribed by U. S. Patent Office.

10 x 15, per gross \$14.50.....per doz. \$1.45.....per sheet \$.15

47 Mailing Envelopes for Patent Office Drawings, made of stiff Manila Paper lined with 2 pieces of corrugated board; with address of Commissioner of Patents printed on outside. A safer way of mailing patent drawings than rolling in a tube:

per gross \$10.00....per doz. \$.87...per ½ doz. \$.50...each \$.10

Mat Boards, rough embossed surface, for mounting drawings, sketches, etc., also for making picture mats; gray on one side and white on the other. Either side can be used:

48	Double 20 x 30 in. (about 3/32 in. thick)	per doz. \$2.50	per sheet \$.25
49	Double 30 x 40 in. (about 3/32 in. thick)	per doz. 5.00	per sheet .50
50	Treble 38 x 52 in. (about 1/8 in. thick)	per doz. 9.00	per sheet .95

Mounting Boards, Best Quality. White. For mounting drawings, sketches, etc.

51	4 ply 22 x 28 in.	per 100 \$ 6.00....	per doz. \$.80....	per sheet \$.08
51½	6 ply 22 x 28 in.	per 100 7.20....	per doz. .95....	per sheet .10
52	8 ply 22 x 28 in.	per 100 8.40....	per doz. 1.20....	per sheet .15
52½	10 ply 22 x 28 in.	per 100 10.50....	per doz. 1.50....	per sheet .20
53	24 ply 22 x 28 in.	per 100 18.00....	per doz. 2.50....	per sheet .25
53½	10 ply 30 x 40 in.	per 100 23.00....	per doz. 4.00....	per sheet .40
54	24 ply 30 x 40 in.	per 100 50.00....	per doz. 7.00....	per sheet .75

Samples of any of above sent on application. Complete sample book, 10c.

Drawing Papers in Rolls.

- 55 **Chartographic Drawing Paper. White, Smooth Surface. Strongest paper made.** Will stand unlimited erasing. Suitable for maps or other drawings where great strength and durability are desired:

Any of above Detail Papers in original rolls of 100-150 lbs.....per lb. .12

- 158 Smooth Detail Paper, suitable for patterns, stencils or stone-yard drawings
Made in the following weights: X, XX, XXX, XXXX:

36, 40, 48 and 54 inches wide. In original rolls of 100-150 pounds, per lb. \$.10

- 160 Manilla Sketching Paper, light weight, suitable for preliminary drawings or details where no great strength is required. Will bear erasing and will take ink or pencil:

	Per 100 yds.	50 yds.	25 yds.
40 inches wide.....	\$3.25.....	\$1.85.....	\$1.00
48 " "	4.00.....	2.20.....	1.25

Samples of any of above sent free on application. Complete sample book for 10c.

Tracing Cloth

164 "Miusa" Tracing Cloth. (made in U. S. A.) Dull Back.

	24 in.	30 in.	36 in.	42 in.
24 yard rolls.....	\$6.90	\$7.20	\$8.00	\$10.75
Per yard35	.36	.40	.84

165 "Pellucid" Tracing Cloth. Dull Back. Very transparent. Particularly recommended on account of its erasing qualities and the absence of pin holes:

	18 in.	30 in.	36 in.	42 in.	48 in.	54 in.
24 yard roll.....	\$4.50	\$7.75	\$8.50	\$11.00	\$15.00	\$16.00
12 yard roll.....	2.50	4.25	4.70	6.00	8.25	8.80
Per yard23	.39	.43	.55	.75	.80

166 Imperial Tracing Cloth. Dull Back.

	30 in.	36 in.	42 in.	48 in.	54 in.
24 yard roll.....	\$9.00	\$10.00	\$13.00	\$17.50	\$18.50
Per yard45	.50	.65	.90	.95

168 "Stuyvesant" Pencil Tracing Cloth. Dull Back.

	30 in.	36 in.	42 in.
24 yard rolls.....	\$7.20	\$8.00	\$10.75

169½ "Fulton" Plotting Cloth. Heavy. For Surveyors and Engineers. Suitable for drawings of all kinds where strength and durability are required. Stands severe erasing and will not shrink or stretch under atmospheric changes. Used in many cases where mounted paper was formerly used. Besides the qualities above mentioned this cloth has the advantage that serviceable blue prints can be made from ink drawings made on same, thereby in many cases saving the cost of a tracing.

	30 in.	36 in.	42 in.	54 in. wide
50 yard rolls.....	\$10.75	\$12.00	\$17.00	\$20.50
25 yard rolls.....	5.50	6.15	8.65	10.50
10 yard rolls.....	2.25	2.50	3.55	4.30

Tracing Cloth in Sheets

Furnished with border lines and titles to match customer's design. Printed with a special ink which will not wash off like printers' ink under the application of any chemicals which may be used to clean pencil marks and dirt from finished tracings. Further this ink, unlike printers' ink, is just as black and opaque as black drawing ink and will therefore blue print as clearly and sharply as the lines of the drawing.

	1,000	500	300	200	100 sheets

Tracing Cloth Powder

- 170 Tracing Cloth Powder, for spreading on tracing cloth to remove any superfluous grease or oil in order to allow the ink to flow more freely on the cloth:
In tin shakers.....per dozen, \$1.50.....each, \$.15

"Houston" Tracing Cloth Cleaner

- 170½ "Houston" Tracing Cloth Cleaner. For removing pencil marks, dirt or grease from finished tracings without injuring the waterproof ink lines or affecting the fabric of the cloth.
NON INFLAMMABLE:
Quart, \$2.00.....Pint, \$1.25.....½ Pint, \$.75

"Pellucid" Solution

- 171 "Pellucid" Solution. Non Inflammable. For making tracings, negatives and drawings transparent so that they may be blue printed readily. Will not affect ink or pencil marks, and will not damage the original or the print:
Gallon, \$3.00.....½ Gallon, \$1.75.....Quart, \$1.00.....Pint, \$.75

"Imperial" Eradicator

- 171½ "Imperial" Eradicator. For Erasing Waterproof Drawing Inks of any color without injury to the tracing cloth:
Pint, \$3.15..½ Pint, \$1.70..4-oz. bottle, \$.90..1-oz. bottle, \$.30

Tracing Paper in Rolls

- 172 "Barclay" Transparent Sketching Paper. White. Unprepared. Very strong. Suitable for details and preliminary sketches. Will take pencil, ink or water colors and stands severe erasing with knife or rubber:
- | | | | |
|--------------------|--------|--------|-------------|
| | 30 in. | 36 in. | 60 in. wide |
| 50 yard rolls..... | \$1.75 | \$2.00 | \$3.25 |
- 174 "Howard" Tracing Paper. White. Very transparent. Has a slight grain which takes pencil or ink readily. Contains no oil or other preparations and will therefore not turn yellow or brittle with age:
- | | | |
|--------------------|--------|-------------|
| | 29 in. | 58 in. wide |
| 44 yard rolls..... | \$2.30 | \$4.60 |
| 22 yard rolls..... | 1.25 | 2.30 |
- 174½ "Nassau" Tracing Paper. White. Unprepared. Very transparent. Has a slight grain suitable for ink or pencil:
- | | |
|---------------------------------|--------|
| 44 yard rolls, 58 in. wide..... | \$2.75 |
| 22 yard rolls, 58 in. wide..... | 1.50 |
- 175 "Pellucid" Tracing Paper. Thin. Unprepared. Very transparent and tough. Smooth:
- | | |
|---------------------------------|--------|
| 50 yard rolls, 42 in. wide..... | \$3.50 |
| 20 yard rolls, 42 in. wide..... | 1.50 |
- 176 "Pellucid" Tracing Paper. Medium. Unprepared. Very transparent and very tough. Suitable as a tracing cloth substitute, as very good blue prints can be made from tracings drawn on this paper.
- | | | | |
|--------------------|--------|--------|-------------|
| | 29 in. | 42 in. | 58 in. wide |
| 50 yard rolls..... | \$4.25 | \$4.50 | \$7.50 |
| 20 yard rolls..... | 1.85 | 2.00 | 3.50 |
- 177 "Beekman" Tracing Paper. White. Unprepared. Very tough and transparent. Slightly grained surface. Suitable for full size details or scale drawings. Good blue prints can be made from pencil drawings made on this paper:
- | | |
|---------------------------------|--------|
| 50 yard rolls, 42 in. wide..... | \$3.50 |
| 20 yard rolls, 42 in. wide..... | 1.50 |
- 178 "Cortland" Tracing Paper. Smooth. Wax Finish. Very tough and transparent. Frequently used as a substitute for tracing cloth. Very good blue prints can be made from tracings drawn on this paper.
- | | | | |
|--------------------|--------|--------|-------------|
| | 29 in. | 40 in. | 58 in. wide |
| 20 yard rolls..... | \$2.50 | \$3.20 | \$4.50 |
- 179 Anglo Tracing Paper. Oiled. Medium Thick. Suitable for designers:
- | | |
|---------------------------------|--------|
| 20 yard rolls, 40 in. wide..... | \$2.75 |
|---------------------------------|--------|

Samples of any of above sent on application. Complete sample book, 10c.

Tracing Paper in Rolls—Continued

- 180 **Parchment Tracing Paper.** Thin. Very transparent:
20 yard rolls, 39 in. wide.....\$2.00
- 181 **Parchment Tracing Paper.** Medium. Very hard smooth surface.
Highly transparent:
20 yard rolls, 39 in. wide.....\$3.50
- 182 **Parchment Tracing Paper.** Heavy. Very hard smooth surface.
Highly transparent:
20 yard rolls, 39 in. wide.....\$4.20
- 184 **"Bond" Tracing Paper.** White. Very tough. Slightly grained
surface:
50 yard rolls, 42 in. wide.....\$3.00
20 yard rolls, 42 in. wide..... 1.35
- 185 **"Glass" Tracing Paper.** Thin. Transparent like glass:
50 yard rolls, 42 in. wide.....\$3.50
20 yard rolls, 42 in. wide..... 1.50
- 185½ **"Pearl" Tracing Paper.** Thin. Very transparent. Mat finish:
50 yard rolls, 42 in. wide.....\$3.50
20 yard rolls, 42 in. wide..... 1.50

For Pastes and Mucilage see Nos. 6885-6906.

Prepared Blue Process Papers and Cloth

For making copies (by sun or electric light) from tracings, in white lines on blue ground.

Directions.—The sensitized paper is exposed under the tracing to the light, either in a printing frame or over a flat board covered with a felt cushion and a heavy plate glass. As it is very essential that the tracing and the sensitized paper should be in good contact, a printing frame is preferred. After correct exposure to the light, the paper is put into a water bath, which will at once develop clear white lines on a blue ground (the paper should be handled in dim light only).

*Extra Quick Blue Print Paper. Any of the Papers or Cloths Nos. 196-213, can when so ordered, be prepared with an Extra Quick Printing Solution, which for electric printing, or for sun printing during the winter months, is a decided advantage. Paper thus prepared prints in about 10 minutes in cloudy weather, whereas the regular solution would require a longer exposure. When ordering, please mention whether extra quick or regular solution is desired.

Superior Blue Process Papers, quality "A". Being specially sensitized according to the best formulas, give excellent results and retain their sensitiveness longer than any other papers. They are therefore highly recommendable for export, advertising, prints from photographic negatives, and such other work where a first-class blue print is required.

196 "Superior A" Blue Process Paper. Parchment. Thin. Suitable for mailing:

	30 in.	36 in.	42 in.	54 in. wide

Samples of any of above sent on application. Complete sample book, 10c.

Various Copying Processes

Sun Printing of every description.

Blue Prints. White lines on a blue ground. The most serviceable for general use:

Blue Prints on paper.....per square foot, 2c.

Blue Prints on cloth.....per square foot, 6c.

No Prints made for less than 5c. Special rates for large quantities.

Prices of sensitized papers and directions, see pages 15 and 16.

Black Prints. Dark lines on a light ground. Suitable for copies to be colored:

Black Prints on paper.....per square foot, 4c.

Black Prints on cloth.....per square foot, 7c.

No prints made for less than 10c.

Brown Prints. Negatives, white lines on a brown ground:

Positives, brown lines on a white ground:

Blue Prints from negatives produce blue lines on a white ground:

Negatives from tracings.....per square foot, 6c.

Brown Positives from negatives.....per square foot, 7c.

Brown Positives on cloth from negatives.....per square foot, 12c.

Blue Prints from negatives.....per square foot, 3c.

Blue Prints on cloth from negatives.....per square foot, 7c.

Negatives from Patent Office Drawings.....each, 15c.

No Prints made for less than 10c.

Ink Prints. Perfectly black lines on a pure white ground. Made from a gelatine film without the use of water or chemicals, will therefore not shrink:

No. of copies of each tracing	1	2	3	4-11	12-25	26-100
On smooth paper....sq. ft.	.09	.07	.06	.05	.04¾	.04
On drawing paper...sq. ft.	.10	.08	.07	.06		
On No. 310 Cloth, up to 42 in. wide....sq. ft.	.11	.09	.08	.07	.07	.06¾
On tracing cloth.....						per square foot, 20c.

Prices for larger quantities or on 54 in. cloth on application.

Black Process Paper

385 Black Process Paper. Sensitized. With the aid of this paper very good black prints (black lines on a white ground) can be produced direct from the tracing. The manipulation is as simple as the blue process and requires nothing more than a plain water bath. No chemicals necessary. Instructions with every roll:

	30 in.	36 in.	42 in. wide
10 yard rolls.....	\$2.00	\$2.50	\$3.00

Brown Process Papers and Cloth

Brown Process Papers. Sensitized. Produce a negative (white lines on a dark ground). From this negative, positive copies (dark lines on a white ground), can be made. Or, with the aid of ordinary blue print paper, positives (blue lines on a white ground), can be produced from the same negative.

Directions for use.—Expose the tracing in the usual manner with the prepared paper under it. About two minutes' exposure in good sunlight is sufficient. Wash the print in plain water for about 15 minutes, then place in a water bath to which the Fixing Salt has been added. After leaving in this Fixing Bath for a few minutes, wash well in clear water and then hang print up to dry.

Fixing Bath consists of 1 oz. of Fixing Salt dissolved in one quart of water.

390 **Brown Process Paper.** Thin, for negatives and for positives which are to be mailed:

Print Frames on Wheel Carriages.

These Carriages and Frames are made of hardwood and are substantial in construction. The Frame revolves in the standards, can be tilted to any angle, and by means of a notched wheel can be fastened in any desired position. A Frame which is much wider than the window can be swung through, and afterwards adjusted to the proper angle to catch the sunlight.

670 Printing Frame with polished Plate Glass and Cushion, complete with Frame on Carriage :

Each, \$32.60	\$44.25	\$58.20	\$68.00	\$75.00	\$89.25

Wheel Carriages.

675 Wheel Carriages only, without Frames :

For Frames, sizes.....	24x30	30x42	Each, \$20.00
" " "	36x48 and larger		" 25.00

Track for Blue Print Frames.

This is a very practical track arrangement upon which cars may be run out of a window, carrying blue print frames for exposure. In ordering give distance from Floor to the top of Window Sill and Thickness of Wall.

685 Tracks for Frames and Cars, No. 670.....each, \$15.00

Blue Print Wringer.

The revolving Brass Roll guides the print as it passes through the wringer and prevents wrinkling. The frame is made of malleable **IRON**, thoroughly galvanized to prevent rusting. The rubber rolls are of the best quality, especially compounded to preserve the print and dry the paper evenly. A wringer of this kind will pay for its cost in a very short time by the saving of labor and time in drying blue prints. Rollers are 3 inches in diameter.

690 Blue Print Wringers :

	24 in.	30 in.	36 in.	38 in.	44 in.	48 in long
Each.....	\$32.00.....	\$40.00.....	\$45.00.....	\$47.00.....	\$50.00.....	\$55.00

Shaw Blue Print Machine

Non-Continuous.

A low priced apparatus for making Blue Prints, Black Prints, Brown Positives or Brown Negatives with a printing capacity up to 30" x 36".

CONSTRUCTION.

The machine consists of a half cylinder of heavy plate glass, set upright, and against which tracings and paper to be printed are firmly held during exposure by a heavy canvas curtain. In the center of the cylinder an arc lamp of high power travels from top to bottom of machine at a uniform rate; the speed variations necessary for the different tracings and papers being obtained by shifting regulator on dial at side of machine.

OPERATION.

In loading the machine, the curtain is rolled back to the extreme right hand side, the tracings and sensitized paper being held in position against the surface of the glass; by then rolling curtain to left, over paper and tracings, the machine is ready to print. As soon as the lamp reaches the bottom of machine, and the prints have been sufficiently exposed, an automatic device throws the switch which controls the arc lamp, thus leaving it unnecessary for the operator to remain at the machine while same is in operation.

SHIPPING.

The machines are well made, are strong and durable. They are shipped completely assembled with the exception of lamp and lamp bracket, and can be set up ready for operation within a few minutes.

In ordering, it is necessary to state on what current the machine is to be operated, whether direct or alternating, and if the latter, the number of cycles. The shipping weight is about 200 pounds crated.

695 Shaw Non-Continuous Blue Printing Machine each \$98.00

Shaw Continuous Blue Print Machine.

Shaw Continuous Blue Print Machine.

The only low-priced Continuous Blue Print Machine on the market. Uses but one Lamp.

CONSTRUCTION.

The machine consists of a half cylinder of heavy plate glass, set up-right, over which slides an endless canvas band driven by an electric motor, through worm gearing and double cone pulleys. Through the center an arc lamp, of special design and high power, travels continuously up and down at a uniform speed. The variations of speed, necessary for different cloths and papers, are obtained by shifting belt on cone pulley by means of a crank at side of machine. The sliding band makes perfect contact and the traveling lamp gives a uniform exposure making all prints of the same even color. The machine will print three lineal feet per minute, and prints of any length up to 42 in. wide can be made in one piece. The easy adjustment of the speed of this machine adapts it to printing Blue Prints, Black Prints, Brown Positives or Brown Negatives.

OPERATION.

The operation is exceedingly simple; the tracings and the cut sheets of the prepared paper are fed into the machine at the right hand side. As soon as one tracing disappears into the machine, insert the next one. The printed sheets and the tracings are taken out at the left hand side. On a basis of 10c. per K.W. hour the cost to operate will not exceed 15c. per hour.

The machines are well built, strong and durable, and are thoroughly inspected before shipping. Shipped complete with Lamp and Motor ready for use, with the exception of lamp and bracket, which can be put in place in a few minutes. Occupies a floor space of only 2½ feet square and stands 8 feet high.

When ordering, please state voltage, and whether direct or alternating current is used. If the latter, state the number of cycles.

700 Shaw Continuous Blue Printing Machine.....each \$265.00

Dunham's Plat and Profile Book

Printed on a fine grade of paper and bound in flexible morocco cover. Size $4\frac{1}{4} \times 9\frac{1}{2}$ in. which makes it convenient for pocket use. Contains 28 profile pages. Plate B, engraving $3\frac{1}{4} \times 7\frac{1}{2}$ in. printed in green, and a blank page with margin $3\frac{1}{2} \times 8\frac{1}{4}$ in. suitable for plats, opposite each profile page. With index page and five pages of useful tables:

865	Dunham's Plat & Profile Book.....each,	\$1 25
-----	--	--------

Profile Books

Nos. 895-899

Nos. 875-890

These books are made up of continuous Profile Paper mounted on muslin, and are folded like a map so that two facing pages represent a section, or six thousand feet.

- 875 Plate A, 4x20 to one inch, printed in green. Size of book about $5\frac{1}{2} \times 8$ in., bound in flexible morocco covers:

	12	25	50	100 miles
Each	\$2.00	\$3.20	\$5.20	\$9.40

- 880 Plate B, 4x30 to one inch, printed in green. Size of book about $4\frac{1}{2} \times 8$ in., bound in flexible morocco covers:

	12	25	50	100 miles
Each	\$2.00	\$3.20	\$5.20	\$9.40

- 890 Metric Profile Books, printed in green. Size of book about $6\frac{1}{2} \times 8\frac{1}{2}$ in., bound in flexible morocco covers:

	100	200 pages
Each	\$5.25	\$9.50

Not Continuous.

- 895 Plate A, 4x20 to one inch, printed in green. Size of book about 7×10 in., bound in stiff morocco covers:

	25	50	100 leaves
Each	\$1.75	\$2.25	\$3.00

- 897 Plate B, 4x30 to one inch, printed in green. Size of book about $5\frac{1}{2} \times 9\frac{1}{2}$ in., bound in stiff morocco covers:

	25	50	100 leaves
Each	\$1.75	\$2.25	\$3.00

- 899 Metric, in Millimetres, printed in green. Size of book about $6\frac{1}{2} \times 8\frac{1}{2}$ in., bound in stiff morocco covers:

	25	50	100 leaves
Each	\$1.75	\$2.25	\$5.00

Special Books made to order at short notice.

Field Book Pencil, see list of pencils.

Field Book Rule, see list of Surveyors' Accessories.

Kopp's Duplicating Field Book

Very popular with railways and other engineering operations, where the field parties are more or less distant from the office where the plotting is done. By making a single entry, it enables the engineering corps in the field to furnish the home office with a duplicate sheet of their proceedings each day. The originals are perforated and can be conveniently placed in the binder furnished with each book.

924 Kopp's Duplicating Field Book, $4\frac{5}{8} \times 7\frac{7}{8}$ inches, 80 numbered leaves and 80 duplicate leaves, per dozen, \$9.75.....each, \$.90

Kopp's Office Recorder Binders, per dozen, \$3.00.....each, \$.30

See pages 34 and 35 for Loose Leaf Field, Level, Transit and Cross Section Books.

Loose Leaf

Field, Level, Transit and Cross Section Books

930

925

The Loose Leaf System having permeated all lines of business, is now also generally called for in the Engineering Profession, and we offer the following solution to this problem:

- I. **For Field Use**, a sheet holder which will rigidly hold from one to one hundred sheets of the required ruling. Made of strong board covers, bound in slate canvas, with concealed spring.
- II. **For Office Use**, a transfer binder to which the finished sheets are transferred for permanent record. Made of heavy binders board, bound in drab canvas with red leather corners. Sheets are instantly and securely fastened in the binder by pushing the metal wedge against the binding posts (see cut) which are made up of 4 sections, each one inch long, and can be built up as required.
- III. **Loose Sheets**, ruled on both sides in the regulation manner as in books Nos. 900-922.

There are so many advantages to a loose leaf system as applied to engineering notes that they are almost too numerous to mention; we cite, however, three of the principal ones:

- I. Does entirely away with the constant dread of loosing books containing valuable and very often irreplaceable notes.
- II. Ability to plot notes as fast as they are turned into the office, without waiting for the book, and ability to refer to any notes at any time, as the office record is always complete.
- III. Simplicity of arrangement, ultimate reduction of cost over bound books, and saving of space in the safe of wherever the notes are kept.

(Continued on next page)

Loose Leaf

Field, Level, Transit and Cross Section Books (Continued)

I. Sheet Holder

	Each
925 Sheet Holder, as described on page 34, to hold sheets $4\frac{1}{2} \times 7\frac{1}{2}$ in., \$.75	
926 Same as No. 925, to hold sheets $8\frac{1}{2} \times 11$ inches.....	.90

II. Transfer Binder

930 Transfer Binder, as described on page 34, to hold sheets $4\frac{1}{2} \times 7\frac{1}{2}$ inches	1.40
931 Same as No. 930, to hold sheets $8\frac{1}{2} \times 11$ inches.....	1.50

III. Loose Sheets

	Per 100	Per 1000
935 Field Book Sheets , ruling same as in Field Books Nos. 900 and 901, $4\frac{1}{2} \times 7\frac{1}{2}$ inches, ruled both sides and punched for binder.....	\$.35	\$3.00
936 Same as No. 935, but $8\frac{1}{2} \times 11$ inches.....	.65	6.00
938 Level Book Sheets , ruling same as in Level Books Nos. 910 and 911, $4\frac{1}{2} \times 7\frac{1}{2}$ inches, ruled both sides and punched for binder35	3.00
939 Same as No. 938, but $8\frac{1}{2} \times 11$ inches65	6.00
941 Transit Book Sheets , ruling same as in Transit Books Nos. 915 and 916, $4\frac{1}{2} \times 7\frac{1}{2}$ inches, ruled both sides and punched for binder35	3.00
942 Same as No. 941, but $8\frac{1}{2} \times 11$ inches65	6.00
944 Cross Section Book Sheets , ruling same as in Cross Section Books Nos. 920-922, $4\frac{1}{2} \times 7\frac{1}{2}$ inches, ruled both sides and punched for binder.....	.35	3.00
945 Same as No. 944, but $8\frac{1}{2} \times 11$ inches.....	.65	6.00

Sheets $8\frac{1}{2} \times 11$ inches can be used in the field in the smaller sheet holder No. 925 by folding sheets in half, and afterwards transferred, opened, to the proper size binder No. 931. By using this combination, the two pages of notes on the same work will be on the same side of the sheet and adjacent to each other, whereas in using the small size sheet they will be on opposite pages.

Surveyors' Traverse Sheets

[illegible]

950 "Fulton" Traverse Sheets. These sheets are arranged to conform with the system of figuring Traverses generally in use. Being ruled and printed ready for use they are very convenient, and save considerable time, besides adding to the neatness and the accompanying accuracy of the work. Size of sheets, 9½ x 16 in. Printed on a fine grade of writing paper. Ruled for 45 courses on a sheet:
 Pad of 100 sheets, \$2.50.....50 sheets.....\$1.75per doz., \$.60

[illegible]

952 "Nassau" Traverse Sheets. Similar to No. 950, but arranged for the Co-ordinate system. Size of sheets, 15 x 19 in. Ruled for 25 courses on a sheet. Each course has three sub-rulings for entering the Sine and CO-sine;
 Pad of 100 sheets, \$3.50..... 50 sheets, \$2.00.....per doz., \$.75
 Full Size sample sheets of above sent free on application.

"Fulton" Figuring Books

- 960 "Fulton" Figuring Books. 60 leaves. Ruled on a fine grade of manilla paper in blue squares of 5 to the inch. Bound in flexible press board covers. Recommended for tabulations, figures and estimates of all kinds:

9 x 12 inches.....	per dozen, \$4.00.....	each, \$.40
6 x 9 inches.....	per dozen, 2.00.....	each, .20

- 961 "Fulton" Figuring Books. 60 leaves. Same as No. 960, but ruled in squares of 4 to the inch:

9 x 12 inches.....	per dozen, \$4.00.....	each, \$.40
6 x 9 inches.....	per dozen, 2.00.....	each, .20

"Fulton" Figuring Pads

- 965 "Fulton" Figuring Pads. 100 sheets each. Ruled on a fine grade of manilla paper in blue squares of 5 to the inch. Padded on top and left-hand side:

9 x 12 inches.....	per dozen, \$4.00.....	each, \$.40
6 x 9 inches.....	per dozen, 2.00.....	each, .20

- 966 "Fulton" Figuring Pads. 100 sheets. Same as No. 965, but ruled in squares of 4 to the inch:

9 x 12 inches.....	per dozen, \$4.00.....	each, \$.40
6 x 9 inches.....	per dozen, 2.00.....	each, .20

Richter's Precision Instruments

Fig. 1

Fig. 2

Fig. 3

Fig. 4

Fig. 5

Originated by E. O. Richter, in 1892 and embody features which had never before been used in the manufacture of Drawing Instruments.

I. They are all made absolutely to gauge, all parts being interchangeable.

II. Materials used; Very finest quality of Rolled German Silver and English Steel

III. The improved construction of the various joints and parts as described further on.

Not only have these instruments attained a world-wide fame and sale on account of their quality, but have been closely imitated by a majority of the competing makers. This latter fact is in itself a concession of the merits and the most sincere flattery of the original Richter System.

Only one quality is made, the cheaper grades as listed are made of the same high grade materials and with the same care as the most expensive ones. The difference in price is caused by the more or less complicated construction.

Compasses and Dividers.

The foremost requirement in compasses and dividers intended for high grade work is an absolutely true and steady joint. The Richter Joint, by reason of its construction, can never become loose or work unevenly; it permits of exact adjustment and can be oiled readily. Fig. 1 shows the plain joint, while Fig. 2 shows the joint with the Straightening Device.

The cheeks of the compasses, which are centrally connected by a bipartite pivot showing a rounded head on either side, are enclosed by a fork carrying corresponding cavities on either side of its inner surface to receive the rounded heads of the pivots.

The ends of the fork are drawn together by a screw passing between the legs of the compasses, by means of which the tension can be minutely regulated.

The cheeks of the compasses are thus held together, not by the natural and therefore transient elasticity of the fork, but by the permanent pressure exerted by the screws.

This construction warrants a true and smooth action for all times. The Straightening Device forces the handle to remain in a position central to the legs. See Fig. 2.

The manner in which pen, pencil and needle parts are held in place in their socket is very simple but effective, so that the parts will never become shaky.

All Genuine Richter Instruments stamped with Trade Mark 

Richter's Precision Instruments—Continued

The socket is split and the two sides drawn together by a T bolt screw which clamps the inserted part firmly. See Fig. 3.

All compasses are supplied with needle point parts, which when inserted convert the compasses into perfect dividers.

One of the legs is provided with a needle point held in a split reversible sleeve (See Fig. 4) so that plain or shouldered needles can be used. The points can always be adjusted to a position perpendicular to the paper without any noticeable shortening of the leg, and permit the use of the compasses for larger radii than with the old style compasses.

The improved Dividers are fitted with movable Round Steel Points kept in place by means of set screws and offer great advantages over any other known system.

I. The fineness of the round points permits of the greatest possible exactness in taking and transferring measurements, leaving on the paper only such slight traces or marks as may be desirable.

II. The sharpening of Divider Points is entirely dispensed with, as they are simply thrown away when worn or damaged and replaced by new ones at a very slight cost. Reserve points are supplied with each set of instruments and can be inserted without the slightest difficulty.

The compasses and dividers are of the flat round type, a cross section of the legs being shown in Fig. 5. Corners and sharp edges are avoided as much as possible to make the handling more pleasant. In order not to obstruct the view in drawing, all hairspring and set screws are placed between the legs of the dividers and compasses.

As mentioned before, all parts are absolutely interchangeable. A pen or pencil part of one compass will fit exactly into another of the same size. Therefore broken or lost screws or parts can easily be replaced by mail. This we mention particularly as the repairing of instruments not made to gauge and not interchangeable has always been a source of annoyance to users of drawing instruments.

Ruling Pens.

The Ruling Pens are made from the finest quality of English Steel especially hardened. Lateral motion of the screws is entirely overcome by the use of T bolt screws. The screws move freely and can adjust themselves to the position of the blades. All Ruling Pens have neat metal handles.

Spring Bow Instruments.

Spring Bow Instruments Nos. 1200-1225 are of a new construction which has the advantage that the tension of the shanks remains nearly constant for any spread, which is not the case in the old style flat spring Bows, which are therefore not listed, but can be supplied if so desired.

The threads of the adjusting screws are all cut very deep and coarse, especially those with the center screw adjustment, to insure quick motion and to avoid stripping of the threads.

Richter's Beam Compasses

Simple but effective in construction. The slide carrying pen and pencil part is held in place by a strong, flat steel spring which presses a milled roller against the bar. To set the instrument, move the slide along the bar to about the desired position and make the fine adjustment by passing the thumb over the milled roller.

1240R Beam Compasses, with reversible pen and pencil, reversible center point, adjustable needle point and wooden bar 20 x $\frac{1}{2}$ x $\frac{1}{4}$ inch, in case.....each, \$6.90

Miscellaneous Instruments

Fountain Ruling Pen.

Illustrations $\frac{3}{4}$ size.

Although many Fountain Ruling Pens have been in the market during recent years, this is really the first of its kind which is perfect. There are no valves or springs of any kind to get out of order or wear out, in fact the very simplicity of this pen makes it a success. It consists of a German silver tube through which a piston rod passes, and which expels the ink into the pen proper by simply turning the screwhead to the right. If the feeding tube should become clogged with ink, a steel cleaning rod, furnished with each pen, serves to clean it. Simple directions for use with each pen.

| 1475 | Lithographer's Selfadjusting Bow Instrument, made of Rolled German Silver with Steel Point, Needle Point fitted with hardened Steel Needle. By removing Steel Needle and inserting a piece of lead, can be used as a Bow Pencil. With graduated thumb screw, divided into 20 parts to a complete revolution. Three revolutions equal $\frac{1}{8}$ in..... | each, \$6.25 |
|------|--|--------------|

Miscellaneous Instruments—Continued

Spirograph.

Illustration $\frac{1}{2}$ size.

- 1480 "Spirograph," A new instrument for drawing the different forms of the Volute or Spiral. To draw Spirals use the double point and force same well into the drawing board and turn carefully so as not to cause any irregularity in the curves by jerking or changing the grasp on the instrument. When properly used, will save days of labor on the most intricate work, and the spirals will all be true spirals with a constantly changing volute.

Being adjustable, the styles of spirals can be modified to suit the designer; there being no limit to the number of spirals that can be produced. Well made of the best material, very simple in construction, and not difficult to use.

Furnished with Pen, Pencil and Needle Point, also an Extra Leg with greater pitch to the thread for producing wider variations in the spiral. This leg can also be used as a handle for the Pen Point making a complete Ruling Pen. If desired can be used as a Common Divider or Compass and can be very rapidly adjusted for different radii without removing the Needle Point from the paper.

In neat morocco case.....each, \$7.00

Combination Compass.

- 1485 Combination Compass, $5\frac{1}{2}$ in. Nickel Plated, with reversible pen and pencil points, with lead box and key, in cloth covered sheatheach, \$.50

Repairs of Drawing Instruments

For the accommodation of our customers, we have made arrangements with a trained instrument maker to repair such parts of instruments which are liable to get out of order, or which through constant use may from time to time need regrinding, re-adjusting, etc., and give below a list of repairs which mostly occur.

German Parts for German Instruments:

Each

Pen Points, Pencil Points or Needle Points for 4 in. Compasses,	\$1.00
Pen Points, Pencil Points or Needle Points for 6 in. Compasses,	1.25
Lengthening Bars for 3½ in. or 6 in. Compasses.....	1.15

(For Separate Parts of Richter Instruments, see page 48.)

Remarks. In sharpening or grinding Ruling Pens we do not remove old ink with benzine or turpentine, but clean them carefully on the inner and outer edges with emery paper, thus insuring an easy flow of ink.

Grinding Pens, we refer to pens slightly broken off, or points which are in such a condition as to require re-shaping.

The Boston Universal Pantograph.

PATENT APPLIED FOR.

1958 Boston Universal Pantograph, made of German silver, with 18 in.

Celluloid Triangle, and directions for use, in box.....each, \$45.00

The Boston Universal Pantograph has been designed in order to combine, at a reasonable cost, the accuracy of very expensive and intricate instruments, with the simplicity and handiness of cheap ones. The expectations have been more than fulfilled, inasmuch as the Boston Universal, besides combining the good qualities of former constructions, possesses some new ones of its own, and furthermore, in reducing and enlarging, covers a field never before attempted.

It is of the most simple construction, in principle somewhat similar to the ordinary wooden pantograph, and requires therefore, only a moment to be set to the desired proportion, ready for use.

It is made of metal throughout, with the minutest care and best workmanship, and compares in accuracy with the best instruments in the market, at a fraction of their cost.

The pivotal point is mounted on a celluloid triangle which may be placed anywhere on the most delicate drawing without injuring it, and a few weights will secure its position as well as the commonly used screws or claws.

The center of the pivot is placed exactly over the right-angled corner of the triangle and can, therefore, easily be marked on the plan, making it possible—

1st. To remove the pantograph entirely and replace it as often as desired.

2nd. To change the position of the triangle and still keep the same pivotal point, thus gaining access to that part of the drawing which the triangle may have covered at first, and obtaining a copy of the entire drawing within the sweep of the pantograph (a circle 8 feet in diameter) without leaving any "bald spots" to be covered separately.

3d. To move the pivotal point from place to place on the plan in a systematic manner and thus reduce or enlarge plans of unlimited size and still get the copy in one piece.

In addition to its use for plain reducing and enlarging, the Boston Universal Pantograph covers a new field in being able to give a copy of a drawing distorted in a systematic manner, as shown to some extent in the accompanying cut, making the pantograph adapted to a variety of purposes more readily imagined than enumerated. These results have been obtained by sliding the triangle on which the pivot is mounted along a straight edge, keeping one side of the triangle against the tracer and consequently against the pencil. In this way the scale parallel to the straight edge is retained and the scale at right angles (or 45 degrees) thereto is changed. An easily acquired familiarity with the pantograph will suggest a wide range of possibilities.

Section Liners.

The **Sphinx Section Liner** is very simple in construction, but nevertheless does very accurate work, whether for close section-lining of 100 to the inch, or wide spacing of 2 to the inch; it can be adjusted to any number of lines per inch and to any angle without changing the position. The instrument rests firmly on the board by means of pins in the bottom, and does not require to be held in position by either T square, straight edge, the hands or weights. (Directions with every instrument.)

The operation of the instrument is very simple and requires no practice.

- 1960 Sphinx Section Liner, in case.....each, \$1.50
 1961 Sphinx Section Liner, with celluloid lined blade, in case..... " 2.00

- 1965 Gardam's Section Liner, Blade 12 inches long, in box.....each, \$6.50
 1966 Gardam's Section Liner, Blade 14 inches long, in box..... " 7.50

(Full description with every instrument.)

- 1968 **Templet Odontograph**, for describing Teeth of Gear Wheels, a valuable instrument for millwrights, machinists, pattern-makers, etc., with full description, in case.....each, \$3.50

BARTH'S Gear Slide Rule, see page 94.

Isograph Precision Protractor

- | | | |
|------|-------------------------------------|--------------|
| 2050 | Isograph Precision Protractor | each, \$.50 |
|------|-------------------------------------|--------------|

Made of transparent celluloid and has the degrees indicated by notches instead of lines (see cut). To lay off a degree put the pencil in the notch corresponding to the degree wanted. For $\frac{1}{2}$ degrees set pencil at the projecting points between the notches. When a number of angles are to be laid off from a common apex, the protractor instead of being held by hand, can be fastened to the paper by two thumb tacks inserted in the notch, at each end of the base line.

Semi Circular Protractors.

Semi-circular Protractors, made of German Silver, with Vernier, Horn Center and Movable Arm.

2214	5½ in., divided to ½ deg., Vernier reading to 3 minutes, length of arm beyond outer edge, 5½ in.....	each, \$10.00

2279	Morocco Case for No. 2274 or 2275.....	" 5.60

Protractors — Continued.

2306 Patented Draughtsman's Protractor.....each, \$5.50

2307 Patented Draughtsman's Protractor, in Morocco Case..... " 7.75

The above Protractor can be quickly set to any angle. It can be used either side up and on either side of the two straight edges, and it is of advantage in dividing a circle, transferring angles or laying off a given angle without resetting, on either side of a line.

The Vernier reads to five minutes.

It forms a convenient extension to a T square, and frequently takes the place of 45 deg. and 60 deg. triangles.

2320 Patented Draughtsman's Protractor.....each, \$4.00

2321 Patented Draughtsman's Protractor, in polished hardwood case.... " 5.00

The above Protractor has spring tempered steel blades about 9 inches long. The arc is 4 inches in diameter, graduated to degrees, with a vernier reading to five minutes.

It has a Binding Screw on one side that securely holds the blades at any angle and enables it to be picked up and moved about readily.

The blades are fastened into the arc in such a manner so as to make all parts come flush on the under side, thus making a perfectly flat surface for resting on the table or drawing.

Either blade can be used in contact with a T square, giving any angle and its complement from 0 degrees to 90 degrees.

It forms a perfectly adjustable triangle.

Boxwood and Ivory Protractors.

- 2324 Boxwood Oblong Protractor, 6 in. long, $1\frac{3}{4}$ in. wide, scales of $\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{4}$, 1 in. to the foot. Scale of chords. Diagonal scales..... each, \$.35
- 2328 Ivory Oblong Protractor, 6 in. long, $1\frac{3}{4}$ in. wide, divided whole degrees, scales of $\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{4}$, 1 in. to the foot. Scale of chords. Diagonal scales. Scales of 25, 30, 35, 40, 45 parts per in..... " 1.60
- 2332 Ivory Oblong Protractor, 6 in. long, $1\frac{3}{4}$ in. wide, divided whole degrees, scales of $\frac{1}{8}$, $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$, $\frac{7}{8}$, 1 in. to the foot. Scale of chords. Diagonal scale. Scales of 30, 35, 40, 45, 50, 60 parts per in..... " 2.00
- 2338 Ivory Oblong Protractor, 6 in. long, 2 in. wide, divided whole degrees, $\frac{1}{8}$, $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$, $\frac{7}{8}$, 1, $1\frac{1}{8}$, $1\frac{1}{4}$, $1\frac{1}{2}$ in. to the foot. Scale of chords. Diagonal scale. Scales of 30, 35, 40, 45, 50, 60 parts per inch..... " 4.35

Paper Protractors.

- 2342 Circular Protractor on Drawing Paper, 8 in. diam., $\frac{1}{2}$ deg..... each, \$.20

- 2354 Circular Protractor on Tracing Paper, 14 in. diam., $\frac{1}{4}$ deg..... " .30
- 2362 Semi-circular Protractor on Bristol Board, 12 in. diam., $\frac{1}{2}$ deg..... " .20

Slide Rules

The "Precision" Slide Rules as listed on the following pages are made of the very best, well seasoned Mahogany stock built up in sections, and with facings of white celluloid on both the upper and lower side of the rules.

The graduations are all engine divided, clearly and accurately cut and on account of the white background, very legible. Particular care and attention is paid to have all scales in perfect alignment.

Each rule is furnished with an aluminum indicator with a fine hair line etched on the glass, insuring very accurate readings and interpolations. Complete book of instructions, written in non-technical language, with each rule.

Fig. I.

Fig. II

Above cuts illustrate the latest improved SELFADJUSTING construction of the "Precision" Slide Rule. The unshaded parts denote the strips of white celluloid, the ends of which are fastened to the wood by German Silver screws, insuring absolute adherence to the body of the rule.

The shaded parts, as shown in cuts, denote the mahogany stock built up in sections to prevent warping.

The rule has imbedded in its interior, three concealed tempered steel springs made of the very finest of material; one near each end of the rule, and one in the center.

Fig. I illustrates the saw cut through the entire length of the rule and shows the steel spring passing through the saw cut from one side of the solid stock to the other.

Fig. II illustrates the position of the steel spring, with the rule cut open at the point where the central spring passes through the body of the rule.

Each spring is fitted tightly into its respective partition, avoiding all lateral play.

This simple but effective construction makes the rule absolutely self-adjustable and will never require any adjusting in the hands of the user.

The elastic and comparatively slight pressure exerted by the steel springs holds the two sections of the rule against the slide with a moderate but even pressure. The slide will therefore always move with a free and even motion, at all times and under all changes of atmospheric conditions.

"Precision Slide Rule"

Improved Construction.

(For description see previous page)

Mannheim Style.

WHITE FACINGS.

Each Rule with Indicator, Case and Book of Directions.

	Each
2509 5 inch, with single line Indicator, No. 2790..	\$3.50
2562 8 inch, with single line Indicator, No. 2790..	4.00
2564 8 inch, with broken line Indicator, No. 2792..	4.25
2574 10 inch, with single line Indicator, No. 2790..	4.25
2576 10 inch, with Indicator, No. 2791, with 2 hair lines set in the ratio of 1/12.....	4.25
2578 10 inch, with broken line Indicator, No. 2792..	4.50
2580 15 inch, with single line Indicator, No. 2794..	9.50
2622 20 inch, with single line Indicator, No. 2794..	12.50
2623 20 inch, with Indicator, No. 2794, with 2 hair lines set in the ratio of 1 : .7854.....	12.50

FOR SCHOOL USE

Useful in teaching classes on Slide Rules or for other demonstrative purposes.

2630 "Precision" Slide Rule, 40 in. long, with directions, in wooden box.....each,	\$50.00
---	---------

"Rival" Slide Rule.

2711 "Rival" Slide Rule, 10 in., mahogany stock, celluloid facings, light construc- tion, with Indicator, Nos. 2790 or 2791, with directions, in case.....each,	\$3.00
--	--------

"Stadia" Slide Rule.

Contains, besides the regular scales on the "Precision" Slide Rule, additional scales for calculating stadia readings.

2713 "Stadia" Slide Rule, 10 in., built up ma- hogany stock, white facings, improved construction, with directions, in case, each,	\$6.50
--	--------

The "Midget" Slide Rule.

White Facings.

2715. ($\frac{3}{4}$ actual size.)

The "Midget" Slide Rule combines the accuracy of a regular 10 inch "Precision" Slide Rule with the convenience afforded by its compactness and portability. Although its dimensions are restricted to only $5\frac{1}{2}$ in. in length, 1 in. in width and $\frac{5}{16}$ in. in thickness, and its weight, including the case, does not exceed $1\frac{1}{2}$ oz., it ranks in accuracy and reliability with the larger rules. In the construction of the stock, the same vital improvements are embodied which distinguish our slide rules. The ultimate subdivisions are as fine as those on the regular 10 in. rule, and by means of a powerful, yet compact and convenient magnifying glass, their value is easily ascertained with the same percentage of accuracy as can be obtained by the 10 inch rules.

- 2715 "Midget" Slide Rule, 5 in. long, built up mahogany stock, white facings, engine divided, improved construction, with magnifier, in sewed leather case with clasp and directions.....each, \$4.50

"Vest Pocket" Slide Rule

2717

- 2717 "Vest Pocket" Slide Rule, 5 in., thin mahogany stock, celluloid facings, narrow for pocket use, with glazed aluminum indicator, case and directions..... each, \$2.25

Nestler's Precision Slide Rule

The feature of this Slide Rule is that it is really a 20-inch Slide Rule in a 10-inch length; giving all the fine subdivisions of a 20-inch Rule in a length of 10 inches.

- 2761 Nestler's Precision Slide Rule, with directions, in case.....each, \$8.00
 2763 Nestler's Precision Slide Rule, same as 2761, but 20 inches long; gives all the fine subdivisions of a rule 40 inches long in a length of 20 inches; with directions, in case.....each, \$22.50

The "Triplex" Slide Rule

A modification of the Mannheim Slide Rule, although resembling the latter in construction and outer appearance, differs from it by the unique grouping of the different scales; these are arranged on the rule starting at the top scale and proceeding to the bottom (see illustration) as follows:

Scale on beveled edge: inches and sixteenths.

Upper scale on top guide piece: Scale of Squares.

Lower scale on top guide piece: Scale from 1—10.

Upper scale on slide: Inverted scale from 10—1.

Lower scale on slide:

Upper scale on bottom guide piece: } Scale from 1—10.

Lower scale on bottom guide piece: Scale of Cubes.

On the reverse of the slide are engraved:

Scale S: Scale of Sines from 34 minutes to 90 degrees.

Scale L: Scale of Logarithms:

Scale T: Scale of Tangents from 5 degrees 42 minutes to 45 degrees.

Scale on straight bottom edge: cm. and mm., continued on the bottom of channel in rule.

To the back of the rule is affixed a printed table of ratios or equations.

This arrangement of the scales greatly simplifies the use of the rule, especially when it is employed in solving complex calculations. It greatly facilitates the solving of the following arithmetical and trigonometrical computations.

1 An inverted scale of logarithms is always in position for immediate use to solve inverted proportions, etc.

2 By using the two adjoining upper scales of slide and rule for multiplying and the two lower for dividing the result will always be found on the rule beneath one of the indexes.

3 Three numbers can be multiplied by one setting and the square or cube of the product read by means of the indicator.

4 Three successive numbers can be divided consecutively by one setting, and the square or cube of the quotient read by means of the indicator.

5 Two or three numbers may be multiplied in rotation, the product divided by another number and the quotient found by one or two settings.

6 From the foregoing it will be obvious that compound calculations can be performed on the "Triplex" rule by about one-half the number of settings required on the regular rule and consequently in one-half of the time.

7 Squares, Square Roots, Cubes or Cube Roots can be read off without any setting by means of the indicator, fourth and sixth powers of roots by one setting, fifth and seventh powers by two settings, etc.

2775 "Triplex" Slide Rule, 10 in., built up mahogany stock, white facings, glazed aluminum indicator, with directions, in case..each, \$5.00

2777 "Triplex" Slide Rule, same as No. 2775, but 20 in. long, with directions, in case..each, \$14.00

(½ actual size)

Slide Rules--Continued

- 2785 **Log-Log Slide Rule**, 10 inch, white face. Has in addition to the regular A, B, C and D scales, two additional scales by means of which all powers and roots, whether with whole or fractional, positive or negative exponents, can be read off with a single setting. With aluminum indicator, with directions in case..... each, \$7.50
- 2787 **Chemical Slide Rule**, for calculations in Organic and Inorganic Analysis, reduction of gases, etc. 10 in. mahogany stock, white facings, aluminum indicator, in case.....each, \$4.50
- 2789 **Electrical Slide Rule**, especially designed for the use of electrical engineers. Besides the regular A, B, C and D scales it has various scales which apply to the calculations used in electro-technical problems. 10 in. mahogany stock, white facings, with aluminum indicator, in caseeach, \$5.75

| Each, | \$1.20 | 1.30 | 1.40 | 1.80 | 2.10 |

The "Calculigraph."

- 2840 The "Calculigraph," or Australian Slide Rule. Printed on cardboard mounted in strong covers, size 9 x 11. Equal to a slide rule 36 feet long, and consists of 43 parallel lines of logarithmic scales, and a bridge of 22 parallel scales by means of which the products are read. The bridge answers the purpose of the indicator on the ordinary slide rule. With this Slide Rule very great accuracy in the result is obtained, and the manipulation is very simple. The maximum error which can possibly occur in the use of the "Calculigraph" does not exceed 1 in 5,000.
- Complete, with directions..... each, \$7.50

The Wager Timber Scale

FOR COMPUTING THE STRENGTH OF WOODEN BEAMS

- 2845 The Wager Timber Scale, a very useful and accurate Slide Rule for computing the strength of wooden beams, joists, etc. Made on Heavy Bristol Board, with two sliding scales. Given any of the following: total load per square foot of area, total load to be carried by a single beam, length of span, distance between centers, fibre stress of wood to be used, size of timbers, or total load of floor, the most economical combination of the unknown quantities can be ascertained on this scale in less than sixty seconds. Contains more information than could be given in 500 pages of tables.
- Complete, with directions..... each, \$1.00

Barth's Gear Slide Rule.

For all computations involving teeth of gear wheels, their permissible stress, pitch, velocity, carrying load, etc. An instrument so simple that very little practice is necessary to become familiar with it. No reference tables or diagrams are needed in its use, as within this slide rule is embodied all the information required for the solution of problems in the strength of gearing, when the working strength of the material is assumed or known.

2850 Complete, with set of instructions and formula, in box.....each, \$2.00

2852 Barth's Speed Slide Rule, for Lathes, Boring Mills, Drill Dresses, etc. Designed to supply the need of some device by which a quick and fairly accurate result can be obtained in ascertaining the cutting speed of a piece of work being turned up in a lathe. Also for determining the number of revolutions per minute at which a piece of work of a certain diameter must revolve in order to give a certain cutting speed.

Complete, with set of instructions, in box..... each, 2.00

2854 Barth's Time Slide Rule, for Lathes, Boring Mills, Drill Presses, etc. Designed for obtaining the time it will take for a tool to cover a certain length of a piece of work on the lathe, when the spindle speed and feed are known.

Complete, with set of instructions, in box..... each, 2.00

Hudson's Horse Power Indicator gives at once by one setting: The indicated horse power of an engine; size of cylinder required for this power; the piston speed; for compound cylinders, the ratios, etc.

2875 Hudson's Horse Power Indicator, printed on cardboard, in leather pocket case..... each, \$3.00

2877 Same as 2875, on boxwood " 6.50

2879 Same as 2875, on ivory..... " 14.40

- 2893 The Charpentier Circular Slide Rule, as shown in illustration above, was designed for vest pocket use. It consists of a German silver disc, $2\frac{3}{8}$ inches diameter, which forms the body of the rule. A brass ring serving as a slide is recessed in the German silver body and is operated by the handle. It compares favorably with a 5 inch slide rule, on account of its compactness and portability, and because it is not affected by changes of temperature.....each, \$5.00
- 2894 The Boucher Watch Form Slide Rule is constructed in the form of a stem-winding double-face-watch. Compound calculations can be performed easily on this calculator by means of two pointers, operated by the stemwinder, and indicating simultaneously on both dials.....each, 8.50
- 2895 Same as 2894, with Metal Dials..... 14.50

- 2897 Thickness Gauge, 2 in. nickel case, in card board case, with directionseach, \$10.00
- 2898 Thickness Gauge, No. 2897, in calf skin pocket case, with directions,each, 10.50
- For accurately measuring the thickness of papers of all description, mounting boards, sheet rubber, celluloid, leather, sheet metal or any sheet material not exceeding 0.11 inch in thickness. The jaws are opened by pressing push button, which when released, automatically closes the jaws, and the thickness of the material inserted between the jaws is indicated on the dial. Reads to one-half thousandths.

Compensating Planimeters

Compensating Planimeters as listed on this page are the latest improved type of the Polar Planimeter. As per illustration, the connection between the tracer arm and the pole arm is a ball and socket joint, which allows the use of the instrument in two opposite symmetrical positions. The area to be computed is traced (clockwise) with the pole arm at the right, and the reading on the roller noted. The instrument is then reset with the pole arm at the left, and the outline again traced in the same clockwise manner, the reading taken and then the mean average between the two readings will give the correct result. Thus a compensation of errors, both in the tracing of the outline and the reading of the vernier is obtained. An exhaustive treatise on the use and application of the planimeter, furnished with instrument.

- 2930 **Compensating Planimeter**, with short graduated tracer arm with limited adjustment; generally used with the vernier set for the unit of 0.01 sq. inches. In drawings made to scale the area is obtained by multiplying the reading on the roller with the scale of the drawing. With improved Needle Pole, Test Rule, Table of Settings and directions, in morocco case.....each, \$24.00

- 2932 **Compensating Planimeter**, with adjustable tracer arm, 9 inches long, adjustable in its entire length, with micrometer vernier for accurate setting. Fully graduated to inches and metric measurements. With improved Needle Pole, Test Rule, Table of Settings and directions, in morocco case.....each, \$35.00
- 2934 **Compensating Planimeter**, same as No. 2932, but with Extension Pole Arm for computing larger areas. With improved Needle Pole, Test Rule, Table of Settings and directions, in morocco caseeach, \$44.00

Planimeters

- 2941 Polar Planimeter, German silver, for measuring areas up to 10 square inches, in inches, tenths and hundredths of a square inch. Needle pole to balance instrument, Fixed Tracer Arm, in case.....each, \$14.00

- 2943 Planimeter, German silver, for measuring areas up to 100 square inches, in inches, tenths and hundredths of a square inch. Needle pole to balance instrument, Fixed Tracer Arm, in case.....each, \$16.50

- 2945 Polar Planimeter, German silver, with Adjustable Tracing Arm, about 9 inches long, for measuring areas. With special arrangement for determining the mean height of Indicator Diagrams. Needle pole, test plate and directions in morocco case.....each, \$35.75
For Indicator Scales, see list of scales.

The "Saxonia" Reckoning Machine will accurately perform the following:

Multiplication, division, addition, subtraction, squaring and cubing. Has automatic devices which give a warning signal in case of wrong manipulation. Very compact and durable. All parts of the mechanism which are subjected to strain, are made of the hardest tool steel, so that the machine, with careful handling, will last a lifetime. The manipulation is so simple that the user can become familiar with same in a few minutes. Each machine fully guaranteed for two years. References from actual users can be had on application. Book of instructions with each machine.

2950 Saxonia Reckoning Machine, gives a product or dividend of 20 places, multiplier of 10, and quotient of 11 places.....each,	375.00
2951 Saxonia Reckoning Machine, gives a product or dividend of 16 places, multiplier of 8, and quotient of 9 places.....	300.00
2952 Saxonia Reckoning Machine, gives a product or dividend of 12 places, multiplier of 6, and quotient of 7 places.....	250.00
2954 Van Eppen's Tables of Sines and Co-sines to 7 places of decimals, a useful companion to Reckoning Machines, for the use of Surveyors and Engineers.....	15.00

2992	3 ft. one side Inches and 1/16ths, other side Millimeters, each,	.40

Steel Folding Rules, with Patent Stop Joints

Made of flexible spring steel $\frac{3}{8}$ in. wide, with patent stop joints that hold rule true and rigid when extended. Length 4 inches when closed. Graduated inches and $\frac{1}{16}$ on one side; feet, $\frac{1}{10}$ and $\frac{1}{100}$ on the other.

2995 Steel Folding Rules with stop joints:

2 foot, in metal bound leather case.....each, \$.70
3 foot, in metal bound leather case..... " 1.00

Johnson's Patent Combination Rule

- 2998 Johnson Rule, made of German Silver, 6 inches long, 2 fold. With protractor reading by vernier to one degree, adjustable to any desired angle or bevel. With caliper for measuring thickness of materials. A very handy and useful tooleach, \$1.50

- 2999 Ivory Joint Rule, 2 feet, 4 fold, German Silver mounted. Divided as follows: Outside face; on outer edge to $\frac{1}{16}$ inches on the first 6 inches, to $\frac{1}{8}$ inch from 6-24 inches; on inner edge to $\frac{1}{12}$ of an inch from 1-12 inches to $\frac{1}{10}$ of an inch from 12-24 inches. OUTSIDE EDGE of rule divided to $\frac{1}{10}$ and $\frac{1}{100}$ of a foot. INSIDE EDGES are beveled and divided $\frac{1}{2}$ and 1, $\frac{3}{8}$ and $\frac{3}{4}$, $\frac{1}{16}$ and $\frac{3}{16}$, $\frac{1}{8}$ and $\frac{1}{4}$ inch to the foot, all divisions being brought to the edge of rule; further, $\frac{5}{8}$ and $\frac{7}{8}$, $1\frac{1}{4}$ and $1\frac{1}{2}$ inch to the foot, divisions not brought to the edge. MAIN JOINT divided to set off angles of 30, 45, 60, 90 and 120 degrees...each, \$7.80
- 3000 Boxwood Joint Rule, 2 feet, 4 fold, brass mounted. Divided as follows: OUTSIDE FACE, on outer edge $\frac{1}{8}$ inch, inner edge $\frac{1}{12}$ from 1-12 inches and $\frac{1}{10}$ from 12-24 inches. INNER FACE, outer edge $\frac{1}{10}$ inch, inner edge, $\frac{1}{2}$ and 1, $\frac{3}{8}$ and $\frac{3}{4}$, $\frac{1}{16}$ and $\frac{3}{16}$, $\frac{1}{8}$ and $\frac{1}{4}$ to the inch, all reading to the edge. OUTSIDE EDGE $\frac{1}{10}$ and $\frac{1}{100}$ of a foot. MAIN JOINT, angles of 30, 45, 60, 90 and 120 degrees...each, \$1.25
- 3001 Common Boxwood Joint Rule, 2 feet, 4 fold, brass mounted, with scales on beveled inside edges, as follows, $\frac{1}{8}$, $\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{8}$ to the foot.....each, \$.50
- 3002 Common Boxwood Joint Rule, 2 feet, 4 fold, brass mounted, $\frac{1}{8}$ and $\frac{1}{16}$ each, \$.15
- 3003 Common Boxwood Joint Rule, 2 feet, 4 fold, brass mounted and outside edges bound with brass, $\frac{1}{8}$, $\frac{1}{10}$, $\frac{1}{12}$ and $\frac{1}{16}$ each, \$.30

Measuring Rods

Divided into feet, inches and $\frac{1}{8}$ ths.

Made of hardwood, with brass trimmings and useful for all sorts of measuring around a building, such as heights of ceilings, door and window openings, etc.

Three Section Rods.

Fitted with Patent Locking Device which prevents the second joint being used until the first is extended to its full length, thus obviating all chances of error in the measurements.

- | | | |
|------|--|--------|
| 3005 | Measuring Rod, 3 sections, 9 feet long, closes to 3 feet, each, | \$3.75 |
| 3007 | Measuring Rod, 3 sections, 12 feet long, closes to 4 feet, each, | 4.50 |
| 3009 | Measuring Rod, 3 sections, 15 feet long, closes to 5 feet, each, | 5.50 |

Two Section Rods.

Fitted with Steel Springs to hold sliding joint at any desired point.

- | | | |
|------|--|--------|
| 3011 | Measuring Rod, 2 sections, 6 feet long, closes to 3 feet, each, | \$1.80 |
| 3013 | Measuring Rod, 2 sections, 8 feet long, closes to 4 feet, each, | 2.10 |
| 3015 | Measuring Rod, 2 sections, 10 feet long, closes to 5 feet, each, | 2.50 |
| 3016 | Measuring Rod, 2 sections, 12 feet long, closes to 6 feet, each, | 3.00 |

Wooden Shrinkage Rules

Made of hardwood, with Brass Tips, divided inches and $\frac{1}{8}$ ths on one side, inches and $\frac{1}{16}$ ths on the other.

- | | | | | | | | | | | |
|------|---------|--------|------------------|---------|-----------|---------------|------|-----|----------|--------|
| 3017 | Extreme | length | 24 $\frac{1}{8}$ | inches, | shrinkage | 1/16 | in., | per | foot.... | \$1.20 |
| 3019 | Extreme | length | 24 2/12 | inches, | shrinkage | 1/12 | in., | per | foot.... | 1.20 |
| 3021 | Extreme | length | 24 2/10 | inches, | shrinkage | 1/10 | in., | per | foot.... | 1.20 |
| 3023 | Extreme | length | 24 3/16 | inches, | shrinkage | 3/32 | in., | per | foot.... | 1.20 |
| 3025 | Extreme | length | 24 $\frac{1}{4}$ | inches, | shrinkage | $\frac{1}{8}$ | in., | per | foot.... | 1.20 |
| 3026 | Extreme | length | 24 $\frac{3}{8}$ | inches, | shrinkage | 3/16 | in., | per | foot.... | 1.20 |
| 3027 | Extreme | length | 24 $\frac{1}{2}$ | inches, | shrinkage | $\frac{1}{4}$ | in., | per | foot.... | 1.20 |

| 3037 | Extreme | length | 25 $\frac{5}{8}$ | inches, | shrinkage | 15/16 | in., | per | foot.... | 1.20 |
| 3038 | Extreme | length | 26 | inches, | shrinkage | 1 | in., | per | foot.... | 1.20 |

Steel Shrinkage Rules

Made of tempered and polished steel $1\frac{1}{4} \times 3/64$ in. Bright surface with sunken figures and graduations, black and distinct. Graduated $\frac{1}{8}$ and $1/16$ inches on both sides. Accuracy guaranteed.

- | | | | | | | | | | | |
|---------------------|---|---------|---------|---------|--------|--------|--------|--------|--|--------|
| 3048 | Steel Shrinkage Rule of any of the following dimensions, each, \$2.00 | | | | | | | | | |

Map Measures, or Rotameters

3051 Map Measure, 5 in. long. Graduations on Card Board Dial. Records inches to miles, and centimeters to kilometers..... \$3.00

3052 Map Measure, watch pattern. With device to set at zero by pressing knob shown in illustration. Large circle records inches and 1/8 inches. Second circle records feet up to ten feet. Beyond ten feet, the number of feet up to 100 feet is recorded on the third circle. Useful for Architects, Engineers and Contractors for taking dimensions from plans. The measurements are recorded full size and then simply multiplied by the scale in which the drawing is made. Very accurate.....each, \$4.50

3053 Map Measure, watch pattern, graduated on card board dial. Reads on two circles in inches and 1/8 inches up to 25 inches..each, \$1.75

3054 Map Measure, same as No. 3053, but with handle similar to illustration of No. 3051.....each, \$3.00

Tally Registers, Pedometers, Passometers, Stop Watches

3061

3064

- 3059 Tally Register, nickel case, 2 in. registers on 2 dials to 99, each, \$2.00
- 3061 Tally Register, nickel case, 2 in. on 3 dials to 999.....each, 2.50
- 3063 Tally Register, nickel case, 2 in. on 3 dials to 9,999.....each, 3.50
For keeping tally or count by pressing on a knob.
- 3064 Pedometer, watch pattern, nickel case, $1\frac{3}{4}$ in. registers
 $\frac{1}{4}$ miles up to 12 miles.....each, 4.50
- 3065 Pedometer, watch pattern, nickel case, $1\frac{3}{4}$ in. registers $\frac{1}{4}$
miles up to 100 miles.....each, 5.25
For measuring distances traversed in walking. Adjustable
to size of step.
- 3066 Passometer, watch pattern, nickel case, $1\frac{3}{4}$ in. registering
up to 25,000 stepseach, 6.00
- 3067 Passometer, watch pattern, nickel case, $1\frac{3}{4}$ in. registers up
to 100,000 stepseach, 6.50
Not adjustable to length of step. The distance walked can be com-
puted by multiplying the length of step by the number of steps
registered.
- 3068 Stop Watch, nickel case, registering 30 minutes by one-
fifth seconds. Stemwinding, engaging and disengaging
mechanismeach, 6.00
- 3069 Stop Watch, same as No. 3068, with double stop, so as to
record elapsed time from first reading.....each, 15.00

Flat Boxwood Scales.

U. S. Standard — Machine Divided.

Metric Scales

Machine Divided

Flat, divided on one side. Millimeters on one edge, and half Millimeters on the other:

3400	Flat Boxwood Metric Scale, 10 cm. long (4 in.).....each,	\$.50
3401	Flat Boxwood Metric Scale, 20 cm. long (8 in.).....each,	.60
3402	Flat Boxwood Metric Scale, 30 cm. long (12 in.).....each,	.75
3403	Flat Boxwood Metric Scale, 50 cm. long (19¾ in.).....each,	1.40
3410	Flat Boxwood, white edge , Metric Scale, 10 cm. long.....each,	.75
3411	Flat Boxwood, white edge , Metric Scale, 20 cm. long.....each,	1.00
3412	Flat Boxwood, white edge , Metric Scale, 30 cm. long.....each,	1.25
3413	Flat Boxwood, white edge , Metric Scale, 50 cm. long.....each,	2.25

Triangular Metric Scales, divided one scale on each edge as follows:
.01, .02, .03, .05, .025, .0125:

3420	Triangular Boxwood Metric Scale, 20 cm. long (8 in.)....each,	\$.75
3421	Triangular Boxwood Metric Scale, 30 cm. long (12 in.)...each,	1.00
3422	Triangular Boxwood Metric Scale, 50 cm. long (19¾ in.)..each,	2.70
3430	Triangular Boxwood, white edge , Metric Scale, 20 cm. long each,	2.00
3431	Triangular Boxwood, white edge , Metric Scale, 30 cm. long each,	2.50
3432	Triangular Boxwood, white edge , Metric Scale, 50 cm. long each,	5.00

Pocket Scales.

U. S. Standard—Machine Divided

Flat Scales, divided on both sides, ⅛, ¼, ½, 1 and ¾, ¾, 1½, 3 in. to the foot, extra small size, convenient to carry in the vest pocket:

3450	Boxwood, 6 in., in leather sheath.....each,	\$.65
3452	Boxwood, white edge, 6 in., in leather sheath.....each,	1.25
3454	Boxwood, 3 in., in leather sheath.....each,	.25

Flat Scales, divided on both sides, 10, 20, 30 and 50 parts to the inch, small size, convenient to carry in vest pocket:

3460	Boxwood, 6 in., in leather sheath.....each,	\$.65
3462	Boxwood, white edge, 6 in., in leather sheath.....each,	1.25
3464	Boxwood, 3 in., in leather sheath.....each,	.25

Beam Scale.

3500	Beam Scale , Boxwood, Double Beveled, 12 in. long. Convenient for figuring framing plans. Each edge has one scale reading from left to right, figured respectively, 14, 16, 18 and 20 inches on centers, laid out on a scale of ¼ in. to the foot.....each,	\$1.20
------	--	--------

"Tubby" Scale

Designed by J. T. Tubby, Jr., Architect.

The new departure in this scale is that the divisions, instead of starting at either end, start at center of scale, at a point marked O (in red), from which the figures read right and left to the end of scale (divisions and figures in black). The usual inch subdivisions are graduated the full length of scale, so that feet and inches can be picked up at any part of same, thereby saving considerable time and insuring accuracy. In addition to the above another row of figures (in red) begins at extreme left and is carried to the right to the end.

By this arrangement the draughtsman avoids shifting the scale for each measurement, which means saving of time and energy.

By having the zero mark in the center (see illustration) it is exceedingly convenient for finding centers, or for laying out doors and windows and partitions from centers.

Made in a length of 15 inches. Opposite bevels, with white celluloid edges. One edge $\frac{1}{4}$ inch to the foot for scale drawings, other edge $\frac{3}{4}$ inch to the foot for details.

3510 "Tubby" Scale, white edges, opposite bevels, 15 in.....each, \$1.75
(Made to order with other scales as desired at short notice).

Scenic Artist's Scale.

3515 Flat Boxwood, 18 in. Each edge scale of $\frac{1}{2}$ in. to the foot, reading left to right and subdivided to full length scale, each, \$1.75

Miscellaneous Scales. (Opposite Bevels.)

3520 Boxwood, 12 in. long, divided $\frac{1}{16}$ and $\frac{1}{32}$ to inch.....each, \$.70
3521 Boxwood, 12 in. long, divided $\frac{1}{32}$ and $\frac{1}{64}$ to inch.....each, .70
3522 Boxwood, 12 in. long, divided $\frac{1}{16}$ to inch and metric.....each, .70
3523 Boxwood, 12 in., full and half size; $\frac{1}{8}$ and $\frac{1}{4}$ size.....each, .70
3524 Boxwood, $12\frac{1}{2}$ in. long, divided $\frac{1}{8}$, $\frac{1}{4}$, $\frac{3}{8}$ and $\frac{3}{4}$ to inch.....each, .75
3525 Boxwood, 12 in. long, divided one edge inches and $\frac{1}{16}$each, .20
3526 Boxwood, 18 in. long, divided one edge inches and $\frac{1}{16}$each, .75
3530 White Edges, 12 in. long, divided $\frac{1}{16}$ and $\frac{1}{32}$ to inch.....each, 1.15
3531 White Edges, 12 in. long, divided $\frac{1}{32}$ and $\frac{1}{64}$ to inch.....each, 1.15
3532 White Edges, 12 in. long, divided $\frac{1}{16}$ to inch and metric.....each, 1.15
3533 White Edges, 12 in. full and half size; $\frac{1}{8}$ and $\frac{1}{4}$ size.....each, 1.15
3534 White Edges, $12\frac{1}{2}$ in. long, divided $\frac{1}{8}$, $\frac{1}{4}$, $\frac{3}{8}$ and $\frac{3}{4}$ to inch.....each 1.25

5020	Improved metal scale, 12 in., one edge $\frac{1}{8}$, other edge $\frac{1}{4}$ in. to the footeach, 1.25
5022	Improved metal scale, 12 in., one edge $\frac{1}{2}$, other edge $\frac{1}{4}$ in. to the footeach, 1.25
5024	Improved metal scale, 12 in., one edge $\frac{3}{8}$, other edge $\frac{3}{16}$ to the footeach, 1.25
5026	Improved metal scale, 12 in., one edge $\frac{3}{4}$, other edge $1\frac{1}{2}$ in. to the footeach, 1.25
5028	Improved metal scale, 12 in., one edge $\frac{1}{2}$, other edge 1 in. to the footeach, 1.25
5029	Improved metal scale, 12 in., one edge $1\frac{1}{2}$, other edge 3 in. to the footeach, 1.25

"Fulton" Boxwood Triangular Scales

U. S. Standard—Machine Divided

The merits of this pattern are that only the extreme edges of the scale touch the paper or drawing, and that the scales are very easily read.

Triangular Scales, divided $\frac{3}{32}$, $\frac{3}{16}$, $\frac{1}{8}$, $\frac{1}{4}$, $\frac{3}{8}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{2}$,
3 in. to the foot, and one edge 16 to the inch.

	Each		Each
4050F 6 in.....	\$.75	4060F White edges, 6 in...	\$1.50
4052F 12 in.....	1.00	4062F White edges, 12 in...	2.25
4054F 18 in.....	2.50	4064F White edges, 18 in...	4.50
4056F 24 in.....	4.50	4066F White edges, 24 in...	6.50

Triangular Scales, divided $\frac{1}{8}$, $\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{8}$, $\frac{3}{4}$, 1, $1\frac{1}{2}$, 3, 2
and 4 in. to the foot, and one edge 16 to the inch.

	Each		Each
4058F 12 in.....	\$1.00	4068F White edges, 12 in...	\$2.25
4059F 18 in.....	2.50	4069F White edges, 18 in...	4.50

Triangular Scales, divided 10, 20, 30, 40, 50, 60 parts to the inch.

	Each		Each
4070F 6 in.....	\$.75	4080F White edges, 6 in...	\$1.50

Each	\$.75	.90	1.20	1.50	1.75	2.40

5115 Ebony Folding Parallel Rule, nickel plated bars:

	6	9	12	15	18	24 inches
Each	\$.30	.60	.75	.90	1.20	2.10

Lettering Triangles and Templates

- 5125 Lettering Triangles, of black celluloid, 3 in set.....per set, \$1.20
 5126 Lettering Triangles, of transparent celluloid, 3 in set..per set, 1.50

- 5130 Lettering Triangles, of black celluloid, 3 in set.....per set, \$1.40
 5131 Lettering Templates, of transparent celluloid, 3 in set..per set, 1.50

- 5135 Triangles, for roof pitches, black celluloid, 6 in set....per set, \$2.50
 5136 Triangles, for roof pitches, of transparent celluloid,
 6 in setper set, 3.00

Embankment Triangles

- 1 x 4 in. 1 x 5 in. 1 x 6 in. 1 x 8 in. 1 x 10 in. 1 x 12 in.
 5138 Triangles, for embankments, of black celluloid, 3 in set,
 6 slopesper set, \$2.25
 5139 Triangles, for embankments, of transparent celluloid,
 3 in set, 6 slopes.....per set, 4.50

Loxograph Triangles

Do away with the annoyance of waiting for ink lines to dry before drawing intersecting or adjoining lines. Mounted on small steel wheels (see cut), which raise the triangle off the drawing just high enough to clear the same. The edges of the steel wheels are so fine that they will not pick up or blur freshly inked lines when the triangle is run through or over these lines. An additional advantage is that the triangle will not collect on its edges the fuzz or dust which is so annoying in triangles that lie flat on the drawing and frequently cause blots.

- 5140 Metallic Loxograph, 45°, 5¾ in., consists of a blackened metallic frame with raised nickel plated ridges, the wheels being set in this frame. Packed in fine artificial leather lined oak caseeach, \$2.50
- 5141 Letonite Loxograph, 45°, 5¾ in., consists of a steel frame, nickel plated and highly polished, in which the wheels are set. This frame holds an outside frame of Letonite, a black material similar to hard rubber. Packed in fine leather lined mahogany case.....each, \$3.75
- 5142 Letonite Loxograph, 45°, 10 in., same as No. 5141.....each, 5.00.

Isograph Triangle

The Isograph in Use

A very ingenious and novel instrument for making drawings in Isometric perspective, which means that all lines, although apparently in perspective, are actual size in the scale to which the drawing is made. Useful for working drawings, as the article drawn is shown in three dimensions and every distance can be measured to scale on the drawing itself.

- 5145 Isograph Triangle, made of transparent celluloid, 6x6 in...each, \$.50

Adjustable Triangle

A 45° triangle, made of maple with German Silver trimmings, which can instantly be adjusted to any possible degree and then clamped by means of a thumb screw. Perfectly flush and can be used on either side. Every half degree from 0° to 45° is marked on the base of the triangle.

The following slopes are indicated on the base, 1:1½, 1:2, 1:2½, 1:3, 1:4, 1:5, 1:6, 1:8, 1:12, 3:4.

For lettering the slopes of A, K, M, N, V, W, X, Y are indicated on the lower edge of the triangle, and the hypotenuse can be adjusted accordingly.

There are no better and quicker means for repeating odd angles or for transplanting same from one board to another. There is not a single branch of the draughting profession where the use of this triangle will not be appreciated.

5147 Adjustable Triangle, 11 inch as described above.....each, \$3.50

Repairs of Triangles

Trueing up edges and angles of wooden and celluloid triangles.

30°x60°	6-8	9-10	11-13	14-18	19-21	22-24 inch

Isograph Elliptic French Curve

- 6064 Isograph Elliptic French Curve.....each, \$.50

An 8 inch curve of transparent celluloid, scientifically designed for drawing any size of isometric ellipses. As shown above, the curve draws one quarter of the ellipse, and is then shifted to the other three quarters. The smaller inside ellipses are for non-scale and free hand work. Will fit all sizes of ellipses as well as those shown in illustration. Besides its use for ellipses, it is suitable for general draughting.

Splines and Spline Weights

Automatic T Square

Automatic T Square Attached to Drawing Board. Front and Rear View.

Automatic T Square, consists of a straight edge attached to the board by means of wires and pulleys, which enable the draughtsman to move the straight edge up and down the board with a perfectly parallel and free and easy motion. It is easily attached in the manner shown in above illustration.

- 6226 Ashwood, Maple Lined Straight Edge, with ledge for pencils and drawing tools, complete with wheels and wires, ready to attach.

For boards,	30	42	48	60	72	84	96	108	120 in. long

- 6228 Maple, Celluloid Lined Straight Edge, with ledge for pencils and drawing tools, complete with wheels and wires, ready to attach.

For boards	30	42	48	60	72	84	96 in long
Each\$5.95	7.20	8.30	10.75	12.20	14.90	19.10

- 6232 Set of wheels and wires, without Straight Edge.....each, \$3.50

Adjustable Drawing Tables

	Each
23 x 31 in....	\$ 8.00
31 x 42 in....	10.00
36 x 48 in....	14.25

- 6236 The Comfort Adjustable Drawing Stand is provided with a slide for raising or lowering the board, and has an iron arc attached, by which the board can be set at any inclination desired for a standing or sitting position; it can be folded up when not in use.

	Each
23 x 31 in..	\$ 7.50
31 x 42 in..	9.50
36 x 48 in..	13.75
42 x 60 in..	18.00

- 6241 The Normal Adjustable Drawing Table can be raised, lowered, or set at an inclination instantly, by simply loosening the nut of the central rod, which moves in slots of the legs, as readily seen from the illustration. The Drawing Board can be detached and the trestles folded up, occupying but little more space than an ordinary drawing board.

Adjustable Drawing Tables—Continued

- 6261 **Forsyth Adjustable Drawing Table.** A Self Adjusting Table consisting of a Hardwood Trestle and a Pine Drawing Board. Table can be raised or lowered at will, and in addition to this the Drawing Board can be tilted to any desired angle. The adjustment for either is absolutely automatic and it is not necessary to fasten any screws or bolts for either adjustment. With drawer 17 x 15 x 3 inches.

	30 x 38	32 x 42	36 x 50	36 x 54
Each	\$15.65	\$16.35	\$18.20	\$19.25

- 6262 **Folding Drawing Table,** is well braced and substantially made. Can be folded and moved without inconvenience.

All tables have hardwood base and softwood top.

Special sizes made to order.

With Board, 24 x 32 in.	30 in. high	each, \$4.50
With Board, 32 x 42 in.	38 in. high	each, 6.00
With Board, 37 x 48 in.	38 in. high	each, 8.00

Academy Drawing Tables

6263

6265

- | | | |

48 x 72 in...each,	52.00

Extras for 6285 & 6287

Drawer $7\frac{1}{2}$ x 13 x $3\frac{1}{2}$,
with tray top and
swinging arm...ea., \$3.50

2 Drawer Cabinet,
 $7\frac{1}{2}$ x 13 x $3\frac{1}{2}$...ea., \$4.00

3 Drawer Cabinet,
 $7\frac{1}{2}$ x 13 x $3\frac{1}{2}$...ea., \$6.00

6287 Iron Stand Drawing Table, with drawing board top made of well seasoned white pine. Can be tilted to any angle and can be raised or lowered by means of a rack and pinion operated by a foot lever, which also serves as a foot-rest. This table has the tube and spring construction, which prevents the table from dropping when the clamps are released, and also assists the operator to raise the table top. All iron work baked enamel. Table can be raised from 30 to 45 inches in height.

The Hoffman Attachable Drawing Board Bracket

A neat practical and most convenient article for the use of artists and draftsmen.

Can be attached to table, desk or chair in various ways and adjusted to any desired height, and tilted and locked at any angle. The top can be reversed.

Its weight is $6\frac{1}{2}$ lbs. and will support a drawing board 3 feet square. Substantially constructed and guaranteed to give satisfaction.

- | | | |

| 6290 | Hoffman's Attachable Drawing Board Bracket..... | \$4.50 |
| 6291 | Same with drawing Board, 20x 26 in., No. 6163..... | 5.75 |
| 6292 | Same with Drawing Board, 23x 31 in., No. 6364..... | 6.25 |

Sectional Filing Cases For Drawings, Tracings, Blue Prints,
Specifications, Maps, Photographs, Etc.

These Sectional Cabinets are made in various interchangeable sections as hereinafter described. Constructed of first-class materials and occupy a minimum space. Quality and uniformity in size guaranteed.

Made of Oak. Paneled sides and strong back. Drawers have dove-tailed corners, are hung at the sides to reduce space and have 6 inch covers at the back to prevent drawings from curling over. Maple drawer sides and slides.

Oak Cabinets finished in golden oak color, with drawer pulls and label holders of antique copper are carried in stock.

Other finish or trimmings furnished to order.

Made in two sizes:

Double Elephant, inside measure.....	32 x 42½ inches
Standard, inside measure.....	25 x 37½ inches

Tool tray for Sections K and M, each, \$1.00

Combination Drawing Tables and Filing Cabinets

These cuts illustrate some of the practical combinations of our Sectional Filing Cases. Other combinations can be made by substituting any sections illustrated on previous pages.

6316

This cabinet is composed of two No. 6300 C, one No. 6300 H, a sketch box three inches deep with a drawing board top and a tilting adjustment, also a swing drawer with tray. The top projects over the front from six to eight inches. Can be raised and lowered ten inches on the level, and can be tilted to almost any desired angle. The tilting device is so arranged that it makes a very rigid outfit.

6316 A, with top 37 x 54 in.....\$73.00

6316 B, with top 37 x 60 in..... 74.00

6316 C, with top 40 x 72 in..... 78.50

6317

This cabinet is composed of one No. 6300 C, one No. 6300 J, a swing drawer with tray, and a drawing board top put on with slides so it can be drawn forward. This combination gives five drawers for filing purposes and is a very neat and durable outfit.

6317 A, with top 37 x 54 in.....\$49.00

6317 B, with top 37 x 60 in..... 50.00

6317 C, with top 40 x 72 in..... 54.50

Combination Drawing Tables and Filing Cabinets—Continued

The Filing Cabinets can also be used in combination with an adjustable Drawing Table Frame as illustrated.

- 6718—This cabinet is composed of one section 6300 C, one 6300 K, Adjustable Drawing Table Frame and a Drawing Board, 42 x 72.....\$68.50

- 6319—This cabinet is composed of one section 6300 K, Adjustable Drawing Table Frame and a Drawing Board, 42 x 72.....46.00
- 6320—Adjustable Drawing Table Frame separately.....\$15.00
- Prices on other combinations quoted on application
- For prices of Drawing Boards to fit these frames see page 131
- Prices of Cabinets on page 139-141

Vertical Filing Cabinets

6329½ Vertical Filing Cabinet:

A neat, compact and dust proof form of filing drawings, tracings, blue prints, etc., vertically. Recommended for offices where floor space is limited. Capacity, 700-1000 prints indexed for instant reference, on inside of cover (see illustration). Each cabinet contains 20 strong manilla pockets, numbered 1-20, re-enforced at the folds with heavy linen. These pockets are closed half way up and are suspended on lateral supports by means of hardwood strips. When cabinet is open, they hang loosely so that they can be easily lifted out for the purpose of removing or inserting drawings. In this open position, the front is rigidly supported by two legs, making a handy table for reference purposes. (See cuts).

"Record" Thumb Tacks.

IMPROVED CONSTRUCTION, which entirely overcomes the drawbacks customary to other tacks, i. e. the bending or breaking of the pins, or their penetrating the head of the tack; they supersede other low-priced tacks by superiority of material, uniformity of sizes and finish. Their heads are shaped so as to offer as little obstruction as possible to the free gliding of the T square-blade.

Clover Inkstand

Patent Applied For.

Holds Any Drawing Ink Bottle.

- 6410 **The Clover Inkstand** is a boon to users of drawing inks, who desire a bottle holder that is almost impossible to upset or in any way dislodge the bottles held therein. This bottle holder adjusts itself to hold the various shapes and sizes of bottles in which different manufacturers put up their inks. Can be used with one, two or three bottles of any size, as each bottle is held independently of the others, and any of the bottles may be instantly removed by simply opening the clasping spring.....per doz., \$3.50....each, \$.35

 Per gross 12.50

- 6595 **Paper Pencils,** 1 dozen in a box, Red, Blue, Yellow, Green, Brown and Black:
 Per dozen \$.95

6601

6602

- 6601 **Chicago Long Point Pencil Sharpener.** Sharpens regular size pencils with a long point which is desirable for draftsmen, architects and artists. Twin milling cutter, Hand Feed, 4 inches high by 3¾ inches long..... each, \$1.00
- 6602 **Chicago Giant Sharpener,** like the above (No. 6601), except that it points all sizes of pencils. Suitable for pointing very soft pencils, crayons, etc..... each, \$1.50
 Extra cutters for above, per pair..... 50c.

Pencil Sharpeners—Continued.

The Dandy has two milling cutters and automatic feed. The adjustment permits pencils to be sharpened with three different styles of points—short, medium and long. Six inches long, $4\frac{1}{4}$ inches high. Finished in rich black enamel, with nickel trimmings.

6606	Dandy Pencil Sharpener	\$4.00
6607	Extra Cutters, per pair75
	Resharpening Cutters, per pair50

6610	Duplex Pencil Sharpener (nickel plated case) ..each,	\$.15	doz,	\$1.50
6612	Reserve sheets of emery cloth.....per package,			.05

The "Duplex" Pencil Pointer is a new and improved device for sharpening a lead pencil in a few moments' time to the very finest point, either round or knife edged.

The Emery Cloth, which forms the abrading surfaces, will last for months; but if worn may be replaced by pushing out the inside holder, in which a new sheet can be easily inserted.

To give the pencil a flat edge, press the point lightly in the groove of the sharpener and draw lengthwise from end to end, or if a round point is required, roll the pencil between the thumb and fingers as shown in cut, taking care not to grind the point.

Architects' Certificate Books, new form which does away with writing a stub for each certificate. By employing the manifold system and using the best quality of **pen-carbon**, an exact fac-simile of the certificate is produced at one writing:

7025	Book of 100 certificates and 100 duplicates, each, \$1.00	3 Books, printed with name and address.....	\$6.75
	6 Books, printed with name and address.....	1 Book, printed with name and address.....	.275
7027	Certificate Book, old form, with stubs.....each,	.50

$\frac{3}{4}$ of actual size.

Agreements Between Architect and Owner

Size of sheet, 6 3/4 x 10 in.

(Printed here in reduced form to conform with size of this page)

and general working drawings (exclusive of details), three-fifths of the fee which would be due for complete services.

The architect's professional services consist of the necessary conferences, the preparation of preliminary studies, making of working drawings, specifications, large scale and full size detail drawings, and of the general direction and supervision of the work. Said supervision will include the examining and passing of accounts, and the visiting of the work by the architect or his deputy as often as shall be necessary to determine that the contract is being faithfully executed. Such supervision is not to be confused with the continuous personal superintendence which may be secured by the employment of a clerk of works, or superintendent of construction whose services, if engaged, shall be at the expense of the owner, but under the selection and sole authority of the architect.

The architect in his professional capacity acts simply as the agent of the owner, and as such incurs no pecuniary responsibility whatever.

Drawings and specifications as instruments of service are the property of the architect.

Necessary traveling expenses are to be paid by the owner, and any charges for special or expert services in connection with heating, ventilating or other mechanical work will be in addition to the above charges.

Radical changes in drawings or specifications will be charged extra.

The undersigned hereby authorize

M.....Architect,
to furnish architectural services according to the customary schedule of charges as adopted by the American Institute of Architects.

Nature and Description of Building.....
Located at

Proposed cost.....
Commission will be at the rate of 6 per cent., based upon the total value of the work, inclusive of the cost of all interior fixtures and fittings for completed buildings.

On residential work, or alterations to existing buildings, on monuments, furniture, decorative and cabinet work and landscape architecture, it is proper to make a higher charge.

Payments to the architect are due as his work progresses in the following order: Upon completion of the preliminary studies, one-fifth of the entire fee; upon completion of specifications and general working drawings (exclusive of details), two-fifths additional; the remainder being due from time to time as the work progresses.

Until an actual estimate is received, charges are based upon the proposed cost of the work, and payments are received on account of the entire fee.

In case of abandonment or suspension of the work, the basis of settlement is to be as follows: For preliminary studies, a fee in accordance with the character and magnitude of the work; for preliminary studies, specifications

7029 Agreements between Architect and Owner, as above, giving Owner's consent in writing as to terms, prices, etc.
Per 100, \$1.50.....per 50, \$.95.....per dozen, \$.25.....each, \$.03

Architects' Record Book

Showing Book Open.

A simple, economical, practical record of details and costs of every building operation. Form which will show the architect instantly how each building operation stands and the cost of each part of the building. It keeps the notes and memoranda (in fact, every detail that could arise in a building operation) always up to date, each one properly indexed and accessible at a moment's notice.

It leaves nothing but live accounts, for, as soon as a building has been completed, the sheet is placed in the transfer binder for permanent record.

- 7031 Architects' Record Book consists of one Record Binder, bound in half black cowhide back and corners, cloth sides, lettered in gold, one leather tabbed index, A-Z, and 100 Record Sheets, size, 8 $\frac{3}{4}$ x11 in., punched for bindereach, \$6.00
 - 7033 Architects' Record Transfer Binder, bound in full canvas, one linen tabbed index.....each, \$3.00
 - 7034 Extra Record Sheets for above, size, 8 $\frac{3}{4}$ x11 in., punched for binderper 100, \$2.00
- Full size sample sheet free on application.

Paper Shears

7100 Paper Shears, best quality, japanned handles and nickel plated blades:

	10	12	14	16 in. long
Each	\$1.25	1.50	2.00	2.60

Celluloid in Sheets

7120 Transparent Celluloid, in sheets 20 x 50 inches, polished on both sides:

Thickness	10/1000	20/1000	30/1000 of an inch
Per sheet	\$1.50	3.00	4.50
Per square inch.....	.005	.01	.015

7125 Colored Celluloid, in sheets, 20 x 50 inches, polished on one side:

Pattern No. 1 White, opaque.	78 Orange.
48 Pale Pink.	80 Lemon Yellow.
49 Deep Pink.	90 Light Green.
47 Lavender.	93 Dark Green.
55 Medium Grey.	105 Carmine.
69 Prussian Blue.	106 Vermilion.
75 Medium Yellow.	116 Brown.
76 Deep Yellow.	199 Black.

Thickness.....	5/1000	7½/1000	10/1000	15/1000	20/1000	25/1000	30/1000 in.
Per sheet	\$.90	1.00	1.20	1.80	2.40	2.90	3.50

Sold in full sheets only.

Metallic Paper

7150 Metallic Paper, for Indicator Cards and all Self-recording devices:

20x25 inches...per ream, \$12.50...per quire, \$1.00...per sheet, \$.10
 3¼ x 7¼ in., cut to standard size of Indicator cards....per 100, \$.50

Furnished to order in rolls of any width or length.

Metallic Paper, as its name implies, is covered with a coating by means of which any mark made by a piece of metal will produce the same appearance as though drawn with pencil.

Air Brushes

Made by O. C. Wold.

The Wold Air Brushes are first-class tools for first-class work. As we have sold a large number of these, without even listing in our catalogue, all of which have given perfect satisfaction, we do not hesitate to endorse this make of Air Brush, and list a few of the principal numbers herein. All guaranteed to be absolutely perfect when leaving the factory.

- 7160 Model A-1 Air Brush, with interchangeable color cup. The construction of the air cap eliminates all waste of air, having two air discharge tubes, which furnish enough air at the correct angle to enable the brush to work with as low as 5 pounds pressure, which is very important for small delicate work. This model is especially intended for very fine sprays and fine hair line work. In case, with reamer, brush hanger, metal rubber tube connection and directionseach, \$22.00

- 7163 Model N Air Brush, with interchangeable color cup and interchangeable color jar. Simple in construction, all parts interchangeable, easily gotten at for cleaning or renewal. Fitted with a double-action lever movement graduating the color supply from a hair line to a broad spray with one sweep of the brush and two movements of the first finger. A general favorite with show card writers and for general all-around work. In case, with directions\$20.00

Air Brushes—Continued

Made by O. C. Wold.

- 7165 **Model C Air Brush**, with interchangeable color cup, which is adjustable, so that the brush can be used on a flat table as well as on an easel, without spilling the colors. In case, with reamer, hanger, metal rubber tube connection, with directions.....\$18.00
- 7167 **Model K Air Brush**, operated with the single action movement; fitted with the glass jar and spatterwork adjustment, and a screw threaded needle adjustment for spray and line work. Any color, water or oil, can be used. Will work from a hair line to a broad spray, but the needle has to be adjusted every time a change is made, as it makes the same width of line or spray until the needle is again changed. With glass jar, holding one ounce of color; in case, with directions\$10.00
- 7169 **Model J Air Brush**, constructed same as Model K in every detail, but smaller; in case, with directions.....\$8.00
- 7172 **Model "Master" Air Brush**. The construction is the same as No. 7160 Model "A-1" Air Brush, only larger. It has a large color cup and will distribute a large volume of color. It is an all around brush for display work and for large or small coloring of any description. It is built with a double action lever motion and will make a hair line to a broad sweep in one movement. The tube cup is adjustable so that the brush can be used in any position. In leather case with tube cup ($\frac{1}{2}$ oz.) with steel reamer, air brush nipple, holder and screws and directions.....\$23.00

Extra Needles....each, \$.25 Reamers...each, \$.25 Air Tips...each, \$1.00

(Continued on next page.)

Fountain Lettering Pen

Made by O. C. Wold.

For rapid and clean-cut lettering and designing of all kinds; easier to handle than the brush and about twice as rapid; furnished with shading pen blades, which make a mark of two shades at a single stroke of the pen, from one color of ink; Pen will not leak in any position.

- 7175 Fountain Lettering Pen, with one Pen Blade.....each, \$4.00

Separate Pen Blades all interchangeable.

No.	00	0	1	2	3	4	5	6	8
Width	1-32	1-16	$\frac{1}{8}$	3-16	$\frac{1}{4}$	$\frac{3}{8}$	$\frac{1}{2}$	$\frac{3}{4}$	$\frac{7}{8}$ in.
Each	\$.20	.20	.20	.20	.20	.20	.20	.25	.25

- 7177 Automatic Shading Pens. One Pen, with holder.....each, \$.25

No.	00	0	1	2	3	4	5
Width	1-32	1-16	$\frac{1}{8}$	3-16	$\frac{1}{4}$	$\frac{3}{8}$	$\frac{1}{2}$ in.

- 7180 Faust's Alphabets. Complete Card Writer, containing lessons and alphabets for use with the Air Brush, Shading Pen, Brush or Marking Pen; 112 pages; size, 6x9; fully illustrated, with over 200 engravings; paper cover.....\$1.25

Recommended to artists who use Flake or Chinese white, or Aniline Colors with the Air Brush. Many an artist who found himself ailing without any apparent reason, finally found the cause to be incipient lead poisoning, brought on by inhaling the fine spray of the white and colors used in the air brush. The article illustrated above has a perfect filter device and will keep out fumes, vapors, gases, smoke or dust. Made of soft white rubber, easily cleaned and bends perfectly to fit any face.

- 7185 Cover's Automatic Rubber Respirator, with directions.....each, \$2.00

KOLESCH & CO., NEW YORK

(Successors to F. Eckel, formerly Blunt & Co.)

The manufacture and sale of High Grade Surveying and Engineering Instruments as conducted by us, was established by Edmund M. Blunt, exact date not obtainable, but who was in business during the war of 1812 and had at that time been in business several years. In 1849 his two sons, Edward Blunt and George W. Blunt, succeeded to the business established by their father.

About 1870 or 1871, two sons of Edward Blunt and an uncle of theirs by name of Nichols took over the plant, under the firm name of Blunt & Nichols.

Later the name was changed to Blunt & Co., then Eckel & Imhoff, and afterwards to F. Eckel, whom many of the engineers of the present day may have met, and during the last 20 years under our management.

Recently, owing to increased business caused by our growing reputation, we have been obliged to increase our facilities and have built a new shop in the suburbs, far from all vibrations and electrical disturbances, which affords the opportunity to do the most delicate adjusting with the greatest possible certainty and precision. This, with the introduction of new and up to date machinery, has made our shop one of the best equipped for precise work in this country. Most of the patterns designed and used by our predecessors have, from time to time, been modified and improved to meet the suggestions and requirements of the Engineering Profession. It has always been our motto: "Quality rather than Quantity." Especial attention has been paid to reducing weight wherever practicable, without affecting the rigidity, durability or stability of the instrument under atmospheric conditions, wind, etc.

We have been particularly successful in producing instruments which will hold their adjustments longer than any others in the market, and we make today "THE BEST INSTRUMENT FOR THE LEAST MONEY; BAR NONE."

The Automatic Dividing Engine, originally built by the Messrs. Blunt during the years 1851-1858, is, with some slight changes in the propelling power, still in use at the present time. As it may interest the Engineering Profession, we give an illustration of same on page 198. This engine is one of the first built in this country and its accuracy has been attested by the late J. E. Hilgard, of the U. S. Coast Survey. Work divided on this engine has stood the most critical tests of Engineers during the many years of its constant use, and the engine ranks to-day as one of the most accurate of its kind.

As no one is admitted to the factory, we have daily messenger service to and from our sales room, which enables us to make very prompt delivery on new work, repairs, etc.

ADDRESS ALL COMMUNICATIONS TO 138 FULTON ST.,
NEW YORK.

For general description of instruments see pages 198-203.

Detailed description of each instrument in its numerical rotation.

For repairs, instruments for rent or exchange, see pages 196-197.

OUR IRON CLAD GUARANTEE, see page 196.

Purchasers of New Instruments

We make "THE BEST INSTRUMENT FOR THE LEAST MONEY, BAR NONE," and can easily prove this to anyone intending to purchase a transit or level, by sending (on receipt of satisfactory references) one of our make for trial and inspection for one or two weeks, and invite comparison with other makes, none excepted.

This offer we make with the knowledge and assurance, based on our dealings with the Engineering Profession during the past 20 years, that any Engineer or Surveyor is competent to recognize a perfect instrument after he has tried it for a week or two, and are willing to abide by his judgment. From the purchaser's point of view, this must be more satisfactory than trying to analyze selling arguments (written or verbal) of different makers, each claiming his to be the best, but whose product is very often not equal to ours.

On account of the questionable value or merit of printed testimonials we refrain from publishing any of these. We can, however, refer any intending purchaser to actual users of our instruments in his locality, from whom he can obtain unbiased judgment.

Here is the only argument we employ: "Try our instrument for a week or two and judge for yourself." We have the quality of instrument to back this argument, and are willing to abide by your decision.

To those not familiar with the Wearing Quality, Durability, Precision and the manner in which our instruments hold their adjustment, the above trial offer should be convincing that we are willing to trust our customer as much as we expect him to trust us.

Purchasers of new instruments and beginners in the profession, may at times be inclined to take advantage of our liberal offer of extending credit. To parties sending us satisfactory references (see page 197) we will be pleased to make an offer in this sense and solicit correspondence to this effect, also where old instruments are offered in exchange for new ones of our make.

OUR IRON CLAD GUARANTEE.

ANY INSTRUMENT MANUFACTURED BY US, AND SOLD BY US OR THROUGH OUR AGENTS IS ABSOLUTELY GUARANTEED TO BE OF THE BEST MATERIAL AND WORKMANSHIP THAT MONEY CAN PROCURE. ANY INSTRUMENT THAT IS NOT ABSOLUTELY SATISFACTORY AND AS REPRESENTED CAN BE RETURNED AT OUR EXPENSE, AND WE WILL REFUND THE MONEY FOR SAME.

Second-hand Transits or Levels for Sale

Second-hand transits or levels, which we may have on hand, we offer for sale at exceedingly low prices. We of course do not guarantee second-hand instruments, unless they are of our own make, but will deliver the instrument in good adjustment and perfect working order.

The age of a second-hand instrument does not necessarily denote its condition, as we frequently have very old instruments that have not had much use or have been carefully used, and are therefore more desirable than some others of later make or construction, but which have seen hard service or have been abused.

On application, we will furnish detailed descriptions and prices of such second-hand instruments which we may have on hand. To facilitate the sending of these descriptions, please mention whether transit or level is desired and the kind of work contemplated.

Repairs

As it is impossible to give an accurate estimate for repairing a surveying instrument without seeing same, and in the case of complicated repairs, without taking it apart and examining every part carefully, we advise sending instruments for examination. We will, in every case, examine the instrument carefully and give an estimate of the cost of the repairs before going ahead with same.

If the estimate is not satisfactory, or if the owner decides not to have the repair made, instrument will be returned without any charge for examination.

Instruments thus sent, should be boxed and carefully packed and should have the name of the sender on the outside of the packing box. Tripods, unless in need of repairs, need not be sent with the instrument.

During the past 20 years we have had at our shop for repairs, Transits and Levels of all known makers, as well as other makes which are not known to-day, including many foreign makes. During this period we have accumulated patterns of these instruments, which enables us to repair Transits or Levels of any make as cheaply, and in many cases better than the maker.

We are also equipped to make the most complicated repairs within a week or 10 days, and do not make any charge for rush work.

As we realize, that a user of surveying instruments is often temporarily handicapped by the fact that one of his instruments is in the repair shop, we most generally, have a number of second-hand instruments on hand for the purpose of loaning to the customer while we are making his repair. For this we make no charge.

On instruments sent to us for repairs, **Express prepaid**, we pay the return charges.

Instruments for Rent

As we frequently take old instruments in exchange when selling a new one of our make, we most generally have a liberal supply of second-hand Transits and Levels on hand which we can rent to parties requiring them for temporary use.

TERMS: Either a cash deposit covering the value of the instrument rented, or, satisfactory references in writing from three responsible parties, guaranteeing the value and the safe return of the rented instrument.

Should the rentee, after the first month, desire to purchase the rented instrument, or a new one of our make, the full rent paid will be allowed on the purchase price. For the next 5 succeeding months, $\frac{1}{2}$ of the rent paid will be allowed, after which no further allowance will be made.

ALL RENT PAYABLE IN ADVANCE each month on the even date on which the instrument is rented.

Charges for Renting Instruments

Rent for second-hand Transit or Level....	per month	\$10.00,	per week,	\$5.00
Same, with leveling rod and sighting pole.	"	13.00	"	\$7.50

KOLESCH & CO., New York.

(Successors to F. Eckel, formerly Blunt & Co.)

Automatic Dividing Machine.

General Description of Our Transits and Levels.

The upper and lower plates of our Transits are substantial ribbed castings, and although they weigh about 20 per cent. less than the plates in the old style instruments, they give the instrument a high grade of stiffness and stability. The Standards of our Transits have their legs well spread and set close to the compass box, for the purpose of obtaining the shortest possible axis to telescope and to increase their strength.

Centers. The long compound centers have heavy flanges, and are fitted very accurately into each other; they give the whole instrument an uncommon rigidity and stability. They are made of three different kinds of metal to reduce friction.

Leveling Screws. All our Transits (unless ordered with **three leveling screws**), have a **four-arm piece**, and are provided with a **shifting plate**, sometimes called "shifting center."

The Leveling Centers in our Transits and Levels, which receive the leveling screws, are slotted and can be adjusted by means of the set screws, thus making them uniform under all conditions of wear and temperature. This arrangement dispenses with the dust caps.

The Spirit Levels are extremely sensitive and carefully selected for each instrument.

Clamp and Tangent Screws. The clamps for limbs and centers are all provided with improved micrometer tangent screws, permitting a very fine adjustment of the plates. The screws are made of hard metal, and the clamps are provided with counter springs to take up lost motion.

The Compass in our instruments is graduated to half degrees and marked in quadrants from 0° - 90° , and is provided with a very sensitive bar needle set in a jewel center. The variation plate for correcting the local deviation of the needle is operated by means of a pinion. The shaft of this pinion has a capstan head and is regulated with the adjusting pin.

The Telescope. The best obtainable lenses are used in our telescopes, which are constructed so as to obtain a large flat field with abundant light. The eye-piece, which is adjustable, is provided with a shutter, the objective with cap and sunshade. The object slide is protected by a dust guard, and like the eye-piece, has rack and pinion for focusing. The telescope slides fit snugly and move positively straight, and the line of collimation is correct for all distances. The telescope is well balanced, is reversible from both ends, and has clamp and tangent screw for vertical adjustment. The screws operating the rack and pinion movement of eye-piece and objective are placed on top of the telescope, so as to be accessible for either hand. The magnifying power of our telescopes is about 19-45 diameters. This we have found to be the most serviceable for field and definition.

Graduation. For the purpose of obtaining very sharp and distinct graduations, we divide the horizontal limb as well as the vertical circles or arc on **solid silver**.

The utmost care is given to the correct centering and graduating of the horizontal and vertical circles, and all graduations are warranted to be perfectly accurate.

The vertical arc or circle is divided on **solid silver** and marked from 0° - 90° in quadrants, and usually graduated to 30 minutes reading by vernier to single minutes; but can be graduated to correspond with the divisions of the horizontal limb if desired.

The horizontal limb is numbered as follows: One row 0° - 360° and the other 360° - 0° running in opposite directions, the slant of the figures denoting the latter (see page 200). Has two opposite verniers marked A and B, which are placed at about 30 degrees to the telescope, and are protected by glass covers. Ground glass shades attached to the verniers of all transits Nos. 7500 to 7673.

The verniers of **Solid Silver** on our stock transits Nos. 7500-7673 read to 30 seconds (see cut, page 201). Other divisions to order at short notice.

The Cross and Stadia Hairs in our telescopes are of the best web, uniform in thickness, and are reliable under all atmospheric conditions. All Stadia Hairs are set to read on a leveling rod exactly one foot for a distance of 100 feet, but are adjustable for any other distance.

Gradienter Attachments will be furnished with our instruments whenever required. The Gradienter is a special tangent screw attached to the clamp of the telescope axis; it is divided into 50 parts, one complete revolution of the screw corresponding to one foot in fifty feet distance; fractions of one foot being easily read by the division of the screw.

We use Cloth Finish on all our instruments. Other finish to order.

Style A—The above cut represents the lower plate with the divisions and numbering used on all of our stock transits. Numbered in two rows from 0° - 360° and from 360° - 0° , the slant of the figures denoting the direction. Inner row of figures is placed on **Solid Silver**, and the outer row on the adjacent phosphor bronze of the limb plate. This arrangement makes it almost impossible to make an error in reading.

Can furnish to order any of the following styles of divisions:

Style B—Lower limb plate numbered on inner row 0° - 180° and back 180° - 0° . Outer row from 190° - 360° .

Style C—Inner row in quadrants 0° - 90° - 0° right and left from 0. Outer row, 0° - 360° .

Verniers

The following types of verniers are the ones most generally used, and as they are fully illustrated need not be described in detail. Of those we use

30 seconds verniers on our Transits Nos. 7500-7673

60 seconds verniers on our Transits Nos. 7700-7722

20 seconds verniers to order only

Limb plate divided to 20 minutes, verniers reading to 30 seconds.

Limb plate divided to 30 minutes, verniers reading to 60 seconds.

Limb plate divided to 20 minutes, verniers reading to 20 seconds.

OUR IRON CLAD GUARANTEE, see page 196.

Tripods and Cases

The head of the Tripod is cast in one piece, has a strong screw-thread for mounting the instrument, and is provided with a screw cap to protect the thread from injury while being transported. With each transit or level Nos. 7500-7831 we furnish a split leg tripod as illustrated below. With levels Nos. 7850-7890 we furnish a solid leg tripod. All tripods with Hip Shoes as per illustration.

Strong, neatly-fitting carrying cases with lock, key and leather strap are furnished with each instrument; also plumb bob, adjusting pins and magnifying glass. To protect the instrument from jarring, the bottom of the case is provided with rubber cushions.

Split Leg Tripod

Extension Tripod

Tripods for Transit and Levels Nos. 7500-7673 and 7800-7831.

- | | | |
|------|--|-------------|
| 7400 | Split Leg Tripod, weight 9½ lbs., without instrument....each, | \$10.00 |
| 7405 | Extension Tripod, weight 11 lbs., without instrument....each, | 15.00 |
| | Same, with instrument instead of regular tripod.....each, | 5.00 |
| 7406 | Combination Tripod, two split legs and one extension leg, without instrument | each, 11.25 |
| | Same, with instrument instead of regular tripod.....each, | 1.25 |

The Combination Tripod is a very popular style of tripod, the one extension leg making it very handy when setting up instrument at the side of a hill or over a high curb.

------	-------------------------------------	--------

Tripod Pad

Tripod Pad, consists of a Sheet Iron Plate enclosed between a Leather Covering on top, and a heavy Felt Pad on the bottom; heavily stitched together and so shaped as to fit the shoulder snugly.

Two short straps and one long strap are riveted stoutly to the plate inside, and so placed as to make the surveying instrument ride evenly on the pad. The two short straps are used to fasten the pad on the tripod, and the long strap is used to fasten the three tripod legs together. When using the surveying instrument, it is not necessary to remove the pad from the tripod. This useful article will be appreciated by all who have done any "hiking" with a surveying instrument.

7425	Tripod Pad, as described above.....	each, \$2.00

7500 "Metropolitan" Transit. (For description see Page 207.)

Kolesch "Metropolitan" Transit, No. 7500

7500 "Metropolitan" Transit. Cloth Finish. U Shape Standards attached to the flange of the inner center. Very rigid and durable construction. With powerful achromatic terrestrial telescope about 12 inches long. Magnifying power 26 diameters. Will focus 5 or 6 feet from the instrument, which point will be appreciated when using a small offset. Lenses are especially made and selected by the best European optical works. Aperture of object glass $1\frac{1}{4}$ in. Dust Cap and Sun Shade. Improved rack and pinion movement to eye-piece and objective. Fine bubble ($4\frac{1}{4}$ in. vial) of **25 seconds** sensitiveness, graduated on the glass, attached to the extreme end of telescope. This position of the bubble insures greater accuracy in leveling and makes it visible in its entire length from either side. Telescope reversible from both ends. Center point in top of telescope axis for the purpose of setting under suspended plumb bob in shaft or tunnel work.

Cross and Stadia Hairs. Disappearing. Set in two diaphragms, so that either the cross or stadia hairs can be brought into focus as desired. Stadia hairs are adjusted to read one foot on a rod 100 feet from the instrument. Constant supplied with each transit.

Shifting Centers. The centers are extra long and made of three different kinds of metal to reduce friction.

The Four Leveling Arms are slotted and can be adjusted by means of the set screws.

Screws. All tangent and leveling screws are made of German Silver. Clamp and tangent screws of improved construction, with counterspring. Clamp screw to lower plate is flat and placed directly in back of the tangent screw which is round (see cut). This enables the engineer to readily distinguish which screw he is using.

Bubbles. Two finely graduated bubbles of **20 seconds** sensitiveness, at right angles to each other, attached to the extreme edge of the limb plate, which position insures greater accuracy in leveling.

Horizontal Limb, 6 inches, graduated on **Solid Silver** to 20 minutes, and numbered from 0° - 360° in two rows running in opposite directions, the slant of the figures denoting the direction.

Verniers. Two opposite verniers (at 30 deg. to the telescope) reading to 30 seconds (see page 201). Ground glass shades attached to both verniers.

Weight of instrument without tripod, about $14\frac{1}{2}$ lbs.

Instrument complete, in finely polished box, with plumb bob, reading glass, center key, adjusting pins, gossamer bag and tripod

No. 7400	each, \$195.00
7502 Same as No. 7500, but with horizontal limb plate $6\frac{1}{2}$ in.,	
	each, 200.00

Optional Additions to Either of Above Transits, To Order Only.

20 seconds verniers, instead of 30 seconds.....	\$10.00
Astronomical (inverting) eye-piece instead of erecting.....	10.00
Three leveling arms instead of four arms.....	15.00
Magnifying glasses attached to verniers on limb plate.....	10.00
Vertical Arc, 5 in., attached to Nos. 7500 or 7502.....	15.00
Vertical Circle, 5 in., attached to Nos. 7500 or 7502.....	20.00

OUR IRON CLAD GUARANTEE, see page 196.

7505 "Metropolitan" Transit, with Compass.

(For description see page 209.)

Kolesch "Metropolitan" Transit No. 7505

7505 "Metropolitan" Transit. Cloth Finish. U Shape Standards attached to the flange of the inner center. Very Rigid and Durable Construction. With powerful achromatic terrestrial telescope about 12 inches long. Magnifying power 26 diameters. Will focus 5 or 6 feet from the instrument, which point will be appreciated when using a small offset. Lenses are especially made and selected by the best European optical works. Aperture of object glass $1\frac{1}{4}$ in. Dust Cap and Sun Shade. Improved rack and pinion movement to eye-piece and objective. Fine bubble ($4\frac{1}{4}$ in. vial) of 25 seconds sensitiveness, graduated on the glass, attached to the extreme end of telescope. This position of the bubble insures greater accuracy in leveling and makes it visible in its entire length from either side. Telescope reversible from both ends. Center point in top of telescope axis for the purpose of setting under suspended plumb bob in shaft or tunnel work.

Cross and Stadia Hairs. Disappearing. Set in two diaphragms, so that either the cross or stadia hairs can be brought into focus as desired. Stadia hairs are adjusted to read one foot on a rod 100 feet from the instrument. Constant supplied with each transit.

Shifting Centers. The centers are extra long and made of three different kinds of metal to reduce friction.

The Four Leveling Arms are slotted and can be adjusted by means of the set screws.

Screws. All tangent and leveling screws are made of German Silver. Clamp and tangent screws of improved construction, with counterspring. Clamp screw to lower plate is flat and placed directly in back of the tangent screw which is round (see cut). This enables the engineer to readily distinguish which screw he is using.

Horizontal Limb, 6 inches, graduated on Solid Silver to 20 minutes, and numbered from 0° - 360° in two rows running in opposite directions, the slant of the figures denoting the direction.

Bubbles. Two finely graduated bubbles of 20 seconds sensitiveness, at right angles to each other, attached to the extreme edge of the limb plate, which position insures greater accuracy in leveling.

Verniers. Two opposite verniers (at 30 deg. to the telescope) reading to 30 seconds, see page 201. Ground glass shades attached to both verniers.

Compass, divided on Solid Silver to half degrees, with improved bar needle $2\frac{1}{4}$ in. With variation plate and capstan head for setting same.

Weight of instrument without tripod, about 15 lbs.

Instrument complete, in finely polished box, with plumb bob, reading glass, center key, adjusting pins, gossamer bag and tripod
No. 7400each, \$210.00

7507 Same as No. 7505, but with horizontal limb plate $6\frac{1}{2}$ in., each, 215.00

Optional Additions to Either of Above Transits, To Order Only.

 OUR IRON CLAD GUARANTEE, see page 196.

7540 "Metropolitan junior" Transit, with Compass.

(For description see page 213.)

Kolesch "Metropolitan Junior" Transit No. 7540

7540 "Metropolitan Junior" Transit. U Shape Standards attached to the flange of the inner center. Very rigid and durable construction. With powerful achromatic terrestrial (erecting) telescope about 8½ inches long. Magnifying power, 20 diameters. Will focus 5 or 6 feet from the instrument, which is very convenient on short offsets. Lenses are especially made and selected by the best European optical works. Aperture of object glass, 1 inch. Dust cap and sun shade. Improved rack and pinion movement to eye-piece and objective. Fine bubble (4 inch vial) of **25 seconds** sensitiveness, graduated on the glass, attached to the extreme end of telescope. This position of the bubble insures greater accuracy in leveling and makes it visible in its entire length from either side. Telescope reversible from both ends. Center point in top of telescope axis for the purpose of setting under suspended plumb bob in shaft or tunnel work.

Cross and Stadia Hairs are disappearing, so that either can be brought into focus as desired. Stadia hairs are adjusted to read one foot on a rod 100 feet from the instrument. Constant supplied with each transit.

Shifting Centers. The Centers are extra long and made of three different kinds of metal to reduce friction.

The Four Leveling Arms are slotted, and can be adjusted by means of the set screws.

Screws. All tangent and leveling screws are made of **German Silver**. Clamp and tangent screws of improved construction with counter spring. Clamp screw to lower plate is flat and located directly behind the tangent screw, which is round (see cut). This position makes them easily accessible to the hand, and enables the engineer to readily distinguish which screw he is using.

Bubbles. Two finely graduated bubbles of **20 seconds** sensitiveness, at right angles to each other, attached to the extreme edge of the limb plate, which position insures greater accuracy in leveling.

Horizontal Limb, 5 inches, graduated on **Solid Silver** to 20 minutes, and numbered from 0°-360° in two rows running in opposite directions, the slant of the figures denoting the direction.

Verniers. Two opposite verniers at 30 degrees to the telescope, reading to 30 seconds (see page 201). Ground glass shades attached to both verniers.

Compass, divided on **Solid Silver** to half-degrees, with improved bar needle, 2 inch. With variation plate and capstan head for setting same.

Weight of instrument without tripod, about 9 lbs.

Instrument, complete, in finely polished box, with plumb bob, reading glass, center key, adjusting pins, gossamer bag and tripod
No. 7400each, \$200.00

Optional Additions to Above Transit, To Order Only.

20 seconds verniers, instead of 30 seconds.....	\$10.00
Astronomical (inverting) eye-piece, instead of erecting.....	10.00
Three leveling arms, instead of four arms.....	15.00
Magnifying glasses attached to verniers on limb plate.....	10.00
60 seconds verniers, at same price as No. 7540.	

OUR IRON CLAD GUARANTEE, see page 196.

7550 "Metropolitan Junior" Transit, with Compass and Vertical Arc.

(For description see Page 215.)

Kolesch "Metropolitan Junior" Transit No. 7550

7550 "Metropolitan Junior" Transit. U Shape Standards attached to the flange of the inner center. Very rigid and durable construction. With powerful achromatic terrestrial (erecting) telescope, about $8\frac{1}{2}$ inches long. Magnifying power, 20 diameters. Will focus 5 or 6 feet from the instrument, which is very convenient on short offsets. Lenses are especially made and selected by the best European optical works. Aperture of object glass, 1 inch. Dust Cap and Sun Shade. Improved rack and pinion movement to eye-piece and objective. Fine bubble (4 inch vial) of 25 seconds sensitiveness, graduated on the glass, attached to the extreme end of telescope. This position of the bubble insures greater accuracy in leveling and makes it visible in its entire length from either side. Telescope reversible from both ends. Center point in top of telescope axis for the purpose of setting under suspended plumb bob in shaft or tunnel work.

Cross and Stadia Hairs are disappearing, so that either can be brought into focus as desired. Stadia hairs are adjusted to read one foot on a rod 100 feet from the instrument. Constant supplied with each transit.

Shifting Centers. The centers are extra long and made of three different kinds of metal to reduce friction.

The Four Leveling Arms are slotted and can be adjusted by means of the set screws.

Screws. All tangent and leveling screws are made of **German Silver**. Clamp and tangent screws of improved construction, with counterspring. Clamp screw to lower plate is flat and located directly behind the tangent screw, which is round (see cut). This position makes them easily accessible to the hand, and enables the engineer to readily distinguish which screw he is using.

Bubbles. Two finely graduated bubbles of 20 seconds sensitiveness, at right angles to each other, attached to the extreme edge of the limb plate, which position insures greater accuracy in leveling.

Horizontal Limb, 5 inches, graduated on **Solid Silver** to 20 minutes, and numbered from 0° - 360° in two rows running in opposite directions, the slant of the figures denoting the direction.

"Extra Fine Quality" Transit

7600 "Extra Fine Quality" Transit.

(For description see page 219.)

Kolesch Transit No. 7600

Extra Fine Quality.

7600 "Extra Fine Quality" Transit, for high-grade work requiring extreme accuracy and precision. **Bent Standards.** With powerful achromatic terrestrial (erecting) telescope about 11 inches long. Magnifying power 24 diameters. Will focus 5 or 6 feet from the instrument, which is very convenient on short offsets. Lenses are especially made and selected by the best European optical works. Aperture of object glass $1\frac{3}{16}$ inches. Dust Cap and Sun Shade. Improved rack and pinion movement to eye-piece and objective. Fine bubble ($4\frac{1}{4}$ in. vial) of **30 seconds** sensitiveness, graduated on the glass and attached to the extreme end of telescope. This position of the bubble insures greater accuracy in leveling and makes it visible in its entire length from either side. Telescope reversible from both ends. Center point in top of telescope axis for the purpose of setting under suspended plumb bob in shaft or tunnel work.

Cross and Stadia Hairs. Disappearing. Set in two diaphragms, so that either the cross or stadia hairs can be brought into focus as desired. Stadia hairs are adjusted to read one foot on a rod 100 feet from the instrument. Constant supplied with each transit.

Shifting Centers. The centers are extra long and made of three different kinds of metal to reduce friction.

The Four Leveling Arms are slotted and can be adjusted by means of the set screws.

Screws. All tangent and leveling screws are made of German Silver. Clamp and tangent screws of improved construction with counter spring. Clamp screw to lower plate is flat and placed directly in back of the tangent screw which is round (see cut). This enables the engineer to readily distinguish which screw he is using.

Bubbles. Two finely graduated bubbles of **25 seconds** sensitiveness, at right angles to each other, attached to the extreme edge of the limb plate, which position insures greater accuracy in leveling.

Horizontal Limb, 6 inches, graduated on **Solid Silver** to 20 minutes, and numbered from 0° - 360° in two rows running in opposite directions, the slant of the figures denoting the direction.

Verniers. Two opposite verniers (at 30 deg. to the telescope) reading to 30 seconds (see page 201). Ground glass shades attached to both verniers.

Compass, divided on **Solid Silver** to half degrees, with improved bar needle $4\frac{1}{2}$ inch. With variation plate and capstan head for setting same.

Weight of instrument without tripod, about 13 lbs.

Instrument complete, in finely polished box, with plumb bob, reading glass, center key, adjusting pins, gossamer bag and tripod No. 7400.....each, \$200.00

7602 Same as No. 7600, but with horizontal limb plate $6\frac{1}{2}$ in., each, 205.00

Optional Additions to Either of Above Transits, To Order Only.

20 seconds verniers, instead of 30 seconds..... \$10.00

OUR IRON CLAD GUARANTEE, see page 196.

7622 "Extra Fine Quality" Transit, with Vertical Circle.

(For description see page 223.)

Kolesch Transit No. 7620

Extra Fine Quality.

7620 "Extra Fine Quality" Transit for high-grade work requiring extreme accuracy and precision. **Bent Standards.** With powerful achromatic terrestrial (erecting) telescope about 11 inches long. Magnifying power 24 diameters. Will focus 5 or 6 feet from the instrument, which is very convenient on short offsets. Lenses are especially made and selected by the best European optical works. Aperture of object glass $1 \frac{3}{16}$ inches. Dust Cap and Sun Shade. Improved rack and pinion movement to eye-piece and objective. Fine bubble ($4\frac{1}{4}$ in. vial) of **30 seconds** sensitiveness, graduated on the glass and attached to the extreme end of telescope. This position of the bubble insures greater accuracy in leveling and makes it visible in its entire length from either side. Telescope reversible from both ends. Center point in top of telescope axis for the purpose of setting under suspended plumb bob in shaft or tunnel work.

Cross and Stadia Hairs. Disappearing. Set in two diaphragms, so that either the cross or stadia hairs can be brought into focus as desired. Stadia Hairs are adjusted to read one foot on a rod 100 feet from the instrument. Constant supplied with each transit.

Shifting Centers. The centers are extra long and made of three different kinds of metal to reduce friction.

The Four Leveling Arms are slotted and can be adjusted by means of the set screws.

Screws. All tangent and leveling screws are made of German Silver. Clamp and tangent screws of improved construction with counter spring. Clamp screw to lower plate is flat and placed directly in back of the tangent screw which is round. (See cut). This enables the engineer to readily distinguish which screw he is using.

Bubbles. Two finely graduated bubbles of **25 seconds** sensitiveness, at right angles to each other, attached to the extreme edge of the limb plate, which position insures greater accuracy in leveling.

Horizontal Limb, 6 inches, graduated on **Solid Silver** to 20 minutes, and numbered from 0° - 360° in two rows running in opposite directions, the slant of the figures denoting the direction.

Verniers. Two opposite verniers (at 30° deg. to the telescope) reading to 30 seconds, (see page 201). Ground glass shades attached to both verniers.

Compass, divided on **Solid Silver** to half degrees, with improved bar needle $4\frac{1}{2}$ inch. With variation plate and capstan head for setting same.

Vertical Circle, 5 in. graduated on **Solid Silver** to 30 minutes with vernier reading to 60 seconds.

Weight of instrument without tripod, about 14 lbs.

Instrument complete, in finely polished box, with plumb bob, reading glass, center key, adjusting pins, gossamer bag and tripod

No. 7400each, \$220.00

7622 Same as No. 7620, but with horizontal limb plate, $6\frac{1}{2}$ inch,
and compass needle, 5 incheach, 225.00

Optional Additions to Either of Above Transits, To Order Only.

20 seconds verniers, instead of 30 seconds..... \$10.00

Astronomical (inverting) eye-piece, instead of erecting..... 10.00

Three leveling arms instead of four 15.00

Magnifying glasses attached to verniers on limb plate..... 10.00

60 seconds verniers, at same price as Nos. 7620 and 7622.

OUR IRON CLAD GUARANTEE, see page 196.

Improved Mountain and Mining Transit.

7630 Improved Mountain and Mining Transit.

For description, see page 225

Improved Mountain and Mining Transit.

7630 Mountain and Mining Transit, Bent Standards, with powerful achromatic terrestrial telescope about $8\frac{1}{2}$ inches long. Magnifying power about 24 diameters, which we have found to be the best for field and definition. The lenses are especially made and selected by the best European optical works. Aperture of object glass 1 inch. Dust cap and sun shade. Improved rack and pinion movement to eye-piece and objective. Fine bubble (4 inch vial) to telescope, graduated on the glass. Telescope reversible from both ends.

Cross and Stadia Hairs. Stadia Hairs are **disappearing**, so that Cross Hairs or Stadia Hairs can be used as desired.

Shifting Center. The centers are extra long and made of three different kinds of metal to reduce friction.

The Four Leveling Arms are slotted and can be adjusted by means of the set screws.

Screws. All clamp, tangent and leveling screws are made of German silver. Clamp and tangent screws of improved construction, with counter spring. Clamp screw to upper plate is round, and clamp screw to lower plate is flat. This enables the Engineer to distinguish which screw he is using.

Horizontal Limb, $5\frac{1}{2}$ inches, graduated on **solid silver** to 20 minutes, and numbered as shown on page 200. Two finely graduated bubbles, at right angles to each other.

Verniers, two opposite verniers (at 30° to telescope), reading to 30 seconds. See page 201.

Compass, divided on **solid silver** to half degrees, with variation plate and improved bar needle about 4 inches long.

Vertical Circle, 4 inches, graduated on **solid silver** to half degrees, with vernier reading to single minutes.

Instrument complete, in finely polished mahogany box, with plumb bob, adjusting pins, center key, screw driver, reading glass and solid or split leg tripod.....each, \$220.00

7632 Mountain and Mining Transit, same as No. 7630, but with vertical arc instead of vertical circle.....	" 205.00
7633 Mountain and Mining Transit, same as No. 7630, but without vertical circle.....	" 190.00

Right-Angle Transit.

For description, see page 227

Right-Angle

Transit.

7640 Right-Angle Transit, Straight Standards, with theodolite axis and gradient screw. Two interchangeable powerful achromatic astronomical telescopes. Upper telescope about 10 inches long, lower telescope about 11 inches long. Magnifying power of telescopes about 24 diameters, which we have found to be the best for field and definition. Lenses are especially made and selected by the best European optical works. Diameter of object glasses $1\frac{1}{8}$ inches. Stadia hairs in both telescopes, also dust caps, sun shades and improved rack and pinion movements to objectives. Fine bubble (4 inch vial) to upper telescope graduated on the glass. Clamp and tangent screws of improved pattern with counter springs. Clamp screw to upper plate is round, and clamp screw to lower plate is flat. This enables the Engineer to distinguish which screw he is using.

Compass divided on **solid silver** to half degrees, with improved needle $4\frac{1}{2}$ inches. Horizontal limb, 6 inches, graduated on **solid silver** to 20 minutes, two opposite verniers, reading to 20 seconds, with glass shades. Two finely graduated bubbles to horizontal limbs.

Vertical Circle, 5 inches, graduated on **solid silver** to half degrees, reading by vernier to single minutes. Shifting center. All leveling and tangent screws of German silver.

Instrument complete, with plumb bob, adjusting pins, etc., in finely polished mahogany box, with tripod.....each, \$350.00

The above can also be made with terrestrial telescopes of the same patterns as shown in Transits No. 7500-7633.

The above style represents an instrument of which we have made a number for city work. As they have to be made to order, we can make any changes desired to suit the requirements of the special work they are intended for. Prices of special instruments on application.

7650 "Engineers" Transit.

(For description see page 229.)

Kolesch "Engineers" Transit, No. 7650

7650 "Engineers" Transit. Straight Standards. With powerful achromatic terrestrial (erecting) telescope about 11 inches long. Magnifying power about 24 diameters. Will focus 5 or 6 feet from the instrument, which is very convenient on short offsets. Lenses are of the very best domestic make. Aperture of object glass, $1 \frac{3}{16}$ inch. Dust Cap and Sun Shade. Improved rack and pinion movement to eye-piece and objective. Fine bubble ($\frac{1}{4}$ inch vial) of **35 seconds** sensitiveness, graduated on the glass, and attached to the extreme end of the telescope. This position of the bubble insures greater accuracy in leveling and makes it visible in its entire length from either side. Telescope reversible from both ends. Center point in top of telescope axis for the purpose of setting under suspended plumb bob in shaft or tunnel work.

Cross and Stadia Hairs are disappearing, so that either can be brought into focus as desired. Constant supplied with each transit.

Shifting Centers. The centers are extra long and made of three different kinds of metal to reduce friction.

The Four Leveling Arms are slotted and can be adjusted by means of the set screws.

Screws. All clamp and tangent screws of improved construction with counterspring. Clamp screw to lower plate is flat and placed directly in back of the tangent screw, which is round (see cut). This enables the engineer to readily distinguish which screw he is using.

Bubbles. Two finely graduated bubbles of **30 seconds** sensitiveness, at right angles to each other, attached to the extreme edge of the limb plate, which position insures greater accuracy in leveling.

Horizontal Limb, 6 inches, graduated on **Solid Silver** to 20 minutes and numbered from 0° - 360° in two rows running in opposite directions, the slant of the figures denoting the direction.

Verniers. Two opposite verniers (at 30 deg. to the telescope), reading to 30 seconds (see page 201). Ground glass shades attached to both verniers.

Compass, divided on **Solid Silver** to half degrees, with improved bar needle $\frac{1}{2}$ inch. With variation plate and capstan head for setting same.

Weight of instrument without tripod, about 14 lbs.

Instrument complete, in finely polished box, with plumb bob, reading glass, center key, adjusting pins, gossamer bag and tripod
No. 7400each, \$160.00

7652 Same as No. 7650, with horizontal limb plate, $6\frac{1}{2}$ in., and
compass needle, 5 inch.....each, \$165.00

Optional Additions to Either of Above Transits, To Order Only.

20 seconds verniers, instead of 30 seconds.....	\$10.00
Astronomical (inverting) eye-piece, instead of erecting.....	10.00
Three leveling arms, instead of four.....	15.00
Magnifying glasses attached to verniers on limb plate.....	10.00
60 seconds verniers, at same price as No. 7650 and 7652.	

OUR IRON CLAD GUARANTEE, see page 196.

7660 "Engineers" Transit, with Vertical Arc.

(For description see Page 231.)

Kolesch "Engineers" Transit, No. 7660

7660 "Engineers" Transit. Straight Standards. With powerful achromatic terrestrial (erecting) telescope about 11 inches long. Magnifying power 24 diameters. Will focus 5 or 6 feet from the instrument, which is very convenient on short offsets. Lenses are of the very best domestic make. Aperture of object glass 1 3-16 inch. Dust Cap and Sun Shade. Improved rack and pinion movement to eye-piece and objective. Fine bubble ($4\frac{1}{4}$ inch vial) of **35 seconds** sensitiveness, graduated on the glass and attached to the extreme end of the telescope. This position of the bubble insures greater accuracy in leveling and makes it visible in its entire length from either side. Telescope reversible from both ends. Center point in top of telescope axis for the purpose of setting under suspended plumb bob in shaft or tunnel work.

Cross and Stadia Hairs are **disappearing** so that either can be brought into focus as desired. Constant supplied with each transit.

Shifting Centers. The centers are extra long and made of three different kinds of metal to reduce friction.

The Four Leveling Arms are slotted and can be adjusted by means of the set screws.

Screws. All clamp and tangent screws of improved construction with counterspring. Clamp screw to lower plate is flat and placed directly in back of the tangent screw, which is round (see cut). This enables the engineer to readily distinguish which screw he is using.

Bubbles. Two finely graduated bubbles of **30 seconds** sensitiveness, at right angles to each other, attached to the extreme edge of the limb plate, which position insures greater accuracy in leveling.

Horizontal Limb, 6 inches graduated on **Solid Silver** to 20 minutes and numbered from 0° - 360° in two rows running in opposite directions, the slant of the figures denoting the direction.

Verniers. Two opposite verniers (at 30 deg. to the telescope) reading to 30 seconds (see page 201). Ground glass shades attached to both verniers.

Compass, divided on **Solid Silver** to half degrees, with improved bar needle $4\frac{1}{2}$ inch. With variation plate and capstan head for setting same.

Vertical Arc, 5 inch, graduated on **Solid Silver** to 30 minutes, with vernier reading to 60 seconds.

Weight of instrument without tripod, about 14 lbs.

Instrument complete, in finely polished box, with plumb bob, reading glass, center key, adjusting pins, gossamer bag and tripod
No. 7400each, \$175.00

7662 Same as No. 7660, but with horizontal limb plate, $6\frac{1}{2}$ inch, and compass needle, 5 incheach, 180.00

Optional Additions to Either of Above Transits, To Order Only.

20 seconds verniers, instead of 30 seconds.....	\$10.00
Astronomical (inverting) eye-piece, instead of erecting.....	10.00
Three leveling arms, instead of four.....	15.00
Magnifying glasses attached to verniers on limb plate.....	10.00
60 seconds verniers, at same price as Nos. 7660 and 7662.	

OUR IRON CLAD GUARANTEE, see page 196.

7670 "Engineers" Transit, with Vertical Circle.

(For description see page 233.)

Kolesch "Engineers" Transit No. 7670

7670 "Engineers" Transit. Straight Standards. With powerful achromatic terrestrial (erecting) telescope about 11 inches long. Magnifying power about 24 diameters. Will focus 5 or 6 feet from the instrument, which is very convenient on short offsets. Lenses are of the very best domestic make. Aperture of object glass $1\frac{3}{16}$ inch. Dust Cap and Sun Shade. Improved rack and pinion movement to eye-piece and objective. Fine Bubble ($\frac{1}{4}$ in. vial) of **35 seconds** sensitiveness graduated on the glass and attached to the extreme end of the telescope. This position of the bubble insures greater accuracy in leveling and makes it visible in its entire length from either side. Telescope reversible from both ends. Center point in top of telescope axis for the purpose of setting under suspended plumb bob in shaft or tunnel work.

Cross and Stadia Hairs are **disappearing** so that either can be brought into focus as desired. Constant supplied with each transit.

Shifting Centers. The centers are extra long and made of three different kinds of metal to reduce friction.

The Four Leveling Arms are slotted and can be adjusted by means of the set screws.

Screws. All clamp and tangent screws of improved construction with counterspring. Clamp screw to lower plate is flat and placed directly in back of the tangent screw which is round (see cut). This enables the engineer to readily distinguish which screw he is using.

Bubbles. Two finely graduated bubbles of **30 seconds** sensitiveness, at right angles to each other, attached to the extreme edge of the limb plate, which position insures greater accuracy in leveling.

Horizontal Limb, 6 inches, graduated on **Solid Silver** to 20 minutes and numbered from 0° - 360° in two rows running in opposite directions, the slant of the figures denoting the direction.

Verniers. Two opposite verniers (at 30 deg. to the telescope) reading to 30 seconds (see page 201). Ground glass shades attached to both verniers.

Compass, divided on **Solid Silver** to half degrees, with improved bar needle, $4\frac{1}{2}$ inch. With variation plate and capstan head for setting same.

Vertical Circle, 5 in., graduated on **Solid Silver** to 30 minutes with vernier reading to 60 seconds.

Weight of instrument without tripod, about $14\frac{1}{2}$ lbs.

Instrument complete, in finely polished box, with plumb bob, reading glass, center key, adjusting pins, gossamer bag and tripod

No. 7400.....each, \$180.00

7672 Same as No. 7670, but with horizontal limb plate $6\frac{1}{2}$ inch and compass needle, 5 in.....each, 185.00

7673 Same as No. 7670, but with $8\frac{1}{2}$ inch telescope, $5\frac{1}{2}$ inch horizontal limb plate, 4 inch compass needle and 4 inch vertical circleeach, \$175.00

Optional Additions to Either of Above Transits, To Order Only.

20 seconds verniers, instead of 30 seconds..... \$10.00

Astronomical (inverting) eye-piece, instead of erecting..... 10.00

Three leveling arms, instead of four..... 15.00

Magnifying glasses attached to verniers on limb plate..... 10.00

60 seconds verniers, at same price as Nos. 7670-7673.

OUR IRON CLAD GUARANTEE, see page 196.

"Media" Transit

7680 "Media" Transit, with Compass.

(For description see page 235.)

Kolesch "Media" Transit No. 7680

7680 "Media" Transit. U Shape Standards attached to the flange of the inner center. Designed for light and moderately accurate work and especially recommended for mining and preliminary surveying and all similar work where a light, portable instrument is desired.

Telescope, about $8\frac{1}{2}$ inches long. Magnifying power 19 diameters. Rack and pinion movement to objective. Improved spiral motion slide to eye-piece. Aperture of object glass, 1 inch.

Long ground bubble of **60 seconds** sensitiveness, graduated on the glass, attached to the extreme end of telescope. This position of the bubble insures greater accuracy in leveling and makes it visible in its entire length from either side. Telescope reversible from both ends. Center point in top of telescope axis for the purpose of setting under suspended plumb bob in shaft or tunnel work.

Lenses of the very best domestic make.

Shifting Centers.

The **Four Leveling Arms** are slotted and can be adjusted by means of the set screws.

Screws. All clamp and tangent screws of improved construction with counterspring. Clamp screw to lower plate is flat and located directly behind the tangent screw, which is round (see cut). This makes them easily accessible to the hand and enables the engineer to readily distinguish which screw he is using.

Bubbles. Two finely graduated bubbles of **50 seconds** sensitiveness, at right angles to each other, attached to the extreme edge of limb plate, which position insures greater accuracy in leveling.

Horizontal Limb, 5 inches, divided on **Solid Silver** to 30 minutes, and numbered from 0° - 360° in two rows running in opposite directions, the slant of the figures denoting the direction.

Verniers. One vernier, at 30 degrees to telescope, reading to 60 seconds (see page 201).

Compass, on raised ring, silvered, divided to 60 minutes with 2 inch needle and jeweled center. With variation plate and capstan head for setting same.

Weight of instrument without tripod, about $7\frac{1}{2}$ lbs.

Instrument complete, in finely polished box, with plumb bob, reading glass, adjusting pins and tripod No. 7410.....each, \$120.00

 OUR IRON CLAD GUARANTEE, see page 196.

"Media" Transit

7690 "Media" Transit, with Compass and Vertical Circle.

(For description see page 237.)

Kolesch "Media" Transit, No. 7690

7690 "Media" Transit. U Shape Standards attached to the flange of the inner center. Designed for light and moderately accurate work and especially recommended for mining and preliminary surveying and all similar work where a light, portable instrument is desired.

Telescope, about $8\frac{1}{2}$ inches long. Magnifying power, 19 diameters. Dust Cap and Sun Shade. Rack and pinion movement to objective. Improved spiral motion slide to eye-piece. Aperture of object glass, 1 inch.

Long ground bubble of **60 seconds** sensitiveness, graduated on the glass, attached to the extreme end of the telescope. This position of the bubble insures greater accuracy in leveling and makes it visible in its entire length from either side. Telescope reversible from both ends. Center point in top of telescope axis for the purpose of setting under suspended plumb bob in shaft or tunnel work.

Lenses of the very best domestic make.

Cross and Stadia Hairs are disappearing, so that either can be brought into focus as desired.

Shifting Centers.

The Four Leveling Arms are slotted and can be adjusted by means of the set screws.

Screws. All clamp and tangent screws of improved construction with counterspring. Clamp screw to lower plate is flat and located directly behind the tangent screw, which is round (see cut). This makes them easily accessible to the hand and enables the engineer to readily distinguish which screw he is using.

Bubbles. Two finely graduated bubbles of **50 seconds** sensitiveness, at right angles to each other, attached to the extreme edge of the limb plate, which position insures greater accuracy in leveling.

Horizontal Limb, 5 inches, divided on **Solid Silver** to 30 minutes, and numbered from 0° - 360° in two rows running in opposite directions, the slant of the figures denoting the direction.

Verniers. One vernier, at 30 degrees to telescope, reading to 60 seconds (see page 201).

Compass, on raised ring, silvered, divided to 60 minutes with 2 inch needle and jeweled center. With variation plate and capstan head for setting same.

Vertical Circle, $3\frac{1}{2}$ inches, silvered, divided to degrees with vernier reading to 5 minutes.

Weight of instrument without tripod, about $7\frac{1}{2}$ lbs.

Instrument complete, in finely polished box, with plumb bob, reading glass, adjusting pins and tripod No. 7410.....each, \$130.00

7692 Same as No. 7690, but with vernier on vertical circle reading to 60 seconds.....each, \$135.00

OUR IRON CLAD GUARANTEE, see page 196.

"Pioneer" Transit, with Compass

7700 "Pioneer" Transit, with Compass.

(For description see page 239.)

Kolesch "Pioneer" Transit No. 7700

7700 "Pioneer" Transit, designed for light and moderately accurate work, and especially recommended for rapid and preliminary surveying and all similar work, where a light, portable instrument is desired. Also largely used for mining engineering.

Telescope, about $8\frac{1}{2}$ inches long. Magnifying power 19 diameters. Dust cap and sun shade. Rack and pinion movement to objective. Improved spiral motion slide to eye-piece. Aperture of object glass, 1 inch.

Long ground bubble of **60 seconds** sensitiveness, graduated on the glass, attached to the extreme end of the telescope. This position of bubble insures greater accuracy in leveling and makes it visible in its entire length from either side. Telescope reversible from both ends. Center point in top of telescope axis for the purpose of setting under suspended plumb bob in shaft or tunnel work.

Lenses of the very best domestic make.

Cross and Stadia Hairs are disappearing, so that either can be brought into focus as desired.

Shifting Centers.

The Four Leveling Arms are slotted and can be adjusted by means of the set screws.

Screws. All clamp and tangent screws of improved construction with counterspring. Clamp screw to lower plate is flat and located directly behind the tangent screw, which is round (see cut). This makes them easily accessible to the hand and enables the engineer to readily distinguish which screw he is using.

Bubbles. Two finely graduated bubbles of **50 seconds** sensitiveness, at right angles to each other, attached to the extreme edge of the limb plate, which position insures greater accuracy in leveling.

Horizontal Limb, 5 inches, divided on **Solid Silver** to 30 minutes, and numbered from 0° - 360° in two rows running in opposite directions, the slant of the figures denoting the direction.

Vernier. One vernier, at 30 degrees to the telescope, reading to 60 seconds (see page 201).

Compass on raised ring, silvered, divided to 60 minutes, with 3 inch needle and jeweled center. With variation plate and capstan head for setting same.

Weight of instrument without tripod, about $7\frac{1}{2}$ lbs.

Instrument complete, in finely polished box, with plumb bob, reading glass, adjusting pins and tripod No. 7410.....each, \$100.00

 OUR IRON CLAD GUARANTEE, see page 196.

"Pioneer" Transit, with Compass
and
Vertical Circle

7710 "Pioneer" Transit, with Compass and Vertical Circle.

(For description see page 241.)

Kolesch "Pioneer" Transit, No. 7710

7710 "Pioneer" Transit, designed for light and moderately accurate work, and especially recommended for rapid and preliminary surveying and all similar work where a light, portable instrument is desired. Also largely used for mining engineering.

Telescope about $8\frac{1}{2}$ inches long. Magnifying power 19 diameters. Dust cap and sun shade. Rack and pinion movement to objective. Improved spiral motion slide to eye-piece. Aperture of object glass, 1 inch.

Long ground bubble of **60 seconds** sensitiveness, graduated on the glass, attached to the extreme end of the telescope. This position of the bubble insures greater accuracy in leveling and makes it visible in its entire length from either side. Telescope reversible from both ends. Center point in top of telescope axis for the purpose of setting under suspended plumb bob in shaft or tunnel work.

Lenses of the very best domestic make.

Cross and Stadia Hairs are disappearing, so that either can be brought in to focus as desired. Constant supplied with each transit.

Shifting Centers.

The Four Leveling Arms are slotted and can be adjusted by means of the set screws.

Screws. All clamp and tangent screws of improved construction with counterspring. Clamp screw to lower plate is flat and located directly behind the tangent screw, which is round (see cut). This makes them easily accessible to the hand and enables the engineer to readily distinguish which screw he is using.

Bubbles. Two finely graduated bubbles of **50 seconds** sensitiveness, at right angles to each other, attached to the extreme edge of the limb plate, which position insures greater accuracy in leveling.

Horizontal Limb, 5 inches, divided on **Solid Silver** to 30 minutes, and numbering from 0° - 360° in two rows running in opposite directions, the slant of the figures denoting the direction.

Verniers. One vernier, at 30 degrees to the telescope, reading to 60 seconds (see page 201).

Compass on raised ring, silvered, divided to 60 minutes, with 3 inch needle and jeweled center. With variation plate and capstan head for setting same.

Vertical Circle, $3\frac{1}{2}$ inches, silvered, divided to degrees with vernier reading to 5 minutes.

Weight of instrument without tripod, about $7\frac{1}{2}$ lbs.

Instrument complete, in finely polished box, with plumb bob, reading glass, adjusting pins and tripod No. 7410...each, \$110.00

7712 Same as No. 7710, but with vernier on vertical circle, reading to 60 seconds.....each, 115.00

OUR IRON CLAD GUARANTEE, see page 196.

Kolesch "Builders" Transit
For
Builders, Architects
and
Construction Engineers

7720 "Builders" Transit.

(For description see page 243.)

Kolesch "Builders" Transit No. 7720

7720 "Builders" Transit, designed for light and moderately accurate work. Especially recommended to builders, architects and construction engineers for taking angles, leveling foundations, examining walls under way of construction, giving lines and levels for buildings, concrete work, street and sewer work, etc.

Telescope about $8\frac{1}{2}$ inches long. Magnifying power 19 diameters. Dust Cap and Sun Shade. Rack and pinion movement to objective. Improved spiral motion slide to eye-piece. Aperture of object glass 1 inch.

Long ground bubble of **60 seconds** sensitiveness, graduated on the glass, attached to the extreme end of the telescope. This position of the bubble insures greater accuracy in leveling and makes it visible in its entire length from either side. Telescope reversible from both ends.

Lenses of the very best domestic make.

Cross Hairs, adjustable by means of the eye-piece.

Shifting Centers.

The Four Leveling Arms are slotted and can be adjusted by means of the set screws.

Screws. All clamp and tangent screws of improved construction with counterspring. Clamp screw to upper plate is round and clamp screw to lower plate is flat (see cut). This enables the engineer to readily distinguish which screw he is using.

Bubbles. Two finely graduated bubbles of **50 seconds** sensitiveness, at right angles to each other, attached to the extreme edge of the limb plate, which position insures greater accuracy in leveling.

Horizontal Limb, 5 inches, divided on **Solid Silver** to 30 minutes, and numbered from 0° - 360° in two rows running in opposite directions, the slant of the figures denoting the direction.

Verniers. One vernier, at 30 degrees to the telescope, reading to 60 seconds (see page 201).

Weight of instrument without tripod, about 7 lbs.

Instrument complete, in finely polished box, with plumb bob, reading glass, adjusting pins and tripod No. 7410.....each, \$85.00

7722 Same as No. 7720, but with vertical circle $3\frac{1}{2}$ inch, divided to degrees, reading by vernier to 5 minutes.....each, 95.00

OUR IRON CLAD GUARANTEE, see page 196.

7800 "Improved" Y Level. (For description see Page 245.)

Kolesch "Improved" Y Level No. 7800

Extra Fine Quality.

7800 "Improved" Y Level, with powerful achromatic terrestrial (erecting) telescope 18 inches long. Magnifying power about 28 diameters, which we have found to be the best for field and definition, both of which are liable to be lost when using excessive magnification. Will focus 8 feet from the instrument.

Lenses are especially made and selected by the best European optical works. Aperture of object glass $1\frac{3}{8}$ in. Improved rack and pinion movement to eye-piece and objective.

Bubbles. Very finely graduated bubble of 20 seconds sensitiveness, graduated on the glass, attached to telescope. Length of bubble 7 inches. Adjustable vertically and horizontally.

Centers and Telescope Rings are made of phosphor bronze and very stout and long.

Telescope Bar is cast in one piece and of a construction patterned after a bridge truss, combining the utmost strength and rigidity with the minimum possible weight.

Telescope will revolve in the Y's without opening the clips, and by means of an improved stop, the cross hairs can be instantly placed in a vertical and horizontal position. Dust Cap and Sun Shade.

The Four Leveling Arms are slotted and can be adjusted by means of the set screws.

Screws. All tangent and leveling screws are made of German Silver. Clamp and tangent screws are attached to, and directly underneath the bar, which position renders them less liable to injury than any other, and makes them easily accessible to the hand. Tangent screws of improved construction with counterspring.

Weight of level without tripod, $10\frac{1}{2}$ lbs.

Instrument complete, in finely polished box, with adjusting pins, gossamer bag and tripod No. 7400.....each, \$125.00

7801 Same as No. 7800, but with telescope 15 inches long..each, 100.00

7802 Same as No. 7800, but with telescope 20 inches long..each, 135.00

7803 Same as No. 7800, but with telescope 22 inches long..each, 140.00

Optical Additions to Any of Above Y Levels, To Order Only.

Steel Centers in place of the regular centers..... \$10.00

Astronomical (inverting) eye-piece, instead of erecting..... 10.00

Three leveling arms instead of four arms..... 15.00

Reflecting mirror attached to telescope bar..... 6.00

Bubble to telescope, 10 seconds sensitiveness..... 5.00

OUR IRON CLAD GUARANTEE, see page 196.

7820 "Engineers" Y Level. (For description see Page 247.)

Kolesch "Engineers" Y Level No. 7820

7820 "Engineers" Y Level, with powerful achromatic terrestrial (erecting) telescope 18 inches long. Magnifying power about 28 diameters, which we have found to be the best for field and definition, both of which are liable to be lost when using excessive magnification. Will focus 8 feet from the instrument.

Lenses of the very best domestic make. Aperture of object glass $1\frac{3}{8}$ in. Improved rack and pinion movement to objective. Eye-piece adjustable for focussing the cross hairs.

Bubbles. Very finely graduated bubble of **25 seconds** sensitiveness, graduated on the glass, attached to telescope. Length of bubble 7 inches, adjustable vertically and horizontally.

Centers and Telescope Rings are made of phosphor bronze and very stout and long.

Telescope Bar is cast in one piece and of a construction patterned after a bridge truss, combining the utmost strength and rigidity with the minimum possible weight.

Telescope will revolve in the Y's without opening the clips, and is provided with a stop so that cross hairs can be instantly brought into a vertical and horizontal position.

The Four Leveling Arms are slotted and can be adjusted by means of the set screws.

Screws. Clamp and tangent screws are attached to and directly underneath the telescope bar, which position renders them less liable to injury than any other, and makes them easily accessible to the hand. Tangent screw of improved construction with counterspring.

Weight of level without tripod, about $10\frac{1}{2}$ lbs.

Instrument complete, in finely polished box, with adjusting pins, gossamer bag and tripod No. 7400.....each, \$100.00

7821 Same as No. 7820, but with telescope 15 inches long..each, 90.00

7822 Same as No. 7800, but with telescope 20 inches long..each, 110.00

7823 Same as No. 7800, but with telescope 22 inches long..each, 120.00

Optional Additions to Either of Above Y Levels, To Order Only.

Steel centers in place of the regular centers..... \$10.00
Astronomical (inverting) eye-piece, instead of erecting..... 10.00
Three leveling arms, instead of four arms..... 15.00

OUR IRON CLAD GUARANTEE, see page 196.

Kolesch "Dumpy" Level No. 7830

7830 "Dumpy" Level with powerful achromatic terrestrial (erecting) telescope 18 inches long. Magnifying power about 28 diameters, which we have found to be the best for field and definition, both of which are liable to be lost when using excessive magnification. Will focus 8 feet from the instrument.

Lenses of the very best domestic make. Aperture of object glass $1\frac{3}{8}$ inch. Improved rack and pinion movement to objective. Eye-piece adjustable for focusing the cross-hairs.

Bubbles. Very finely graduated bubble of 30 seconds sensitivity, graduated on the glass attached to the telescope bar.

Centers are made of phosphor bronze and very stout and long.

Telescope Bar and Rings are of an improved construction designed to produce a very strong instrument, which is not liable to get out of adjustment under the most severe conditions.

The Four Leveling Arms are slotted and can be adjusted by means of the set screws.

Screws. Clamp and tangent screws are attached to, and directly underneath the telescope bar, which position renders them less liable to injury than any other, and makes them easily accessible to the hand. Tangent screw of improved construction with counter spring.

Weight of level without tripod, about $10\frac{1}{2}$ lbs.

Instrument complete, in finely polished box, with adjusting pins, gossamer bag and tripod No. 7400.....each, \$100.00

7831 Same as No. 7830, but with telescope 15 inches long....each, 75.00

Optional Additions to Either of Above Dumpy Levels, To Order Only.

Steel centers in place of the regular centers	\$10.00
Astronomical (inverting) eye-piece, instead of erecting.....	10.00
Three leveling arms instead of four arms.....	15.00

OUR IRON CLAD GUARANTEE, see page 196.

Kolesch "Builders" Tilting Level No. 7850

7850 "Builders" Tilting Level, designed especially for the use of builders, architects and contractors for leveling and plumbing walls, giving lines and levels for buildings, laying out angles, grading streets, sewers, drains, etc.

Telescope about 12 inches long, magnifying power 19 diameters. Lenses of the very best domestic make. Objective $1\frac{1}{4}$ in. Dust cap and sun shade. Rack and pinion movement to objective. Adjustable eye-piece for focussing cross hairs. Fine bubble ($\frac{1}{4}$ in. vial) of 60 seconds sensitiveness, graduated on the glass, attached to the telescope. Improved device for locking the clips in the Y's. The telescope is fitted with an adjustable collar into which the two trunnions, furnished with the instrument, can be inserted by means of a screw thread. In this position, the level can be used as a transit as per above illustration. Horizontal Circle, 3 inches, divided to degrees, reading by a vernier, attached to the spindle, to 5 minutes. This circle is held in place by a friction clutch and can be set at zero at any given point. Clamp and tangent screw with counter spring to level bar. Four Leveling Arms. Weight of level without tripod about 5 lbs.

Instrument complete, in finely polished box, with plumb bob, adjusting pins, metal trivet (shown on page 252), book of instructions and tripod No. 7420.....each, \$57.50

 OUR IRON CLAD GUARANTEE, see page 196.

Kolesch Builders' Level No. 7860

7860 "Builders" Level, designed especially for the use of Builders, Architects and Contractors for leveling and plumbing walls, giving lines and levels for buildings, laying out angles, grading streets, sewers, drains, etc.

Telescope about 12 inches long, magnifying power 19 diameters. **Lenses** of the very best domestic make. Objective $1\frac{1}{8}$ inch. Dust Cap and Sun Shade. Rack and pinion movement to objective. Adjustable eye-piece for focussing cross hairs. **Fine bubble** ($\frac{1}{4}$ inch vial) of **60 seconds** sensitiveness, graduated on the glass, attached to the telescope. Improved device for locking the clips in the Y's. **Horizontal circle**, 3 inches, divided to degrees reading by a vernier, attached to the spindle, to 5 minutes. This circle is held in place by a friction clutch and can be set at zero at any given point. **Clamp and Tangent Screw** with counter spring to level bar. **Four Leveling Arms**. Weight of level without tripod about 5 pounds.

Instrument complete, in finely polished box, with plumb bob, adjusting pins, metal trivet (shown on page 252), book of instructions and tripod No. 7420each, \$45.00

7865 "Builders" Level, general description same as No. 7860, but without tangent screw. Complete with tripod No. 7420...each, \$40.00

OUR IRON CLAD GUARANTEE, see page 196.

Kolesch "Builders" Level with Compass, No. 7870

- 7870 Builders' Level, with Compass. General description same as No. 7860, but with compass divided on raised ring to degrees and with improved needle $2\frac{3}{4}$ in. Weight without tripod about 6 lbs. Complete in finely polished box, with plumb bob, adjusting pins, metal trivet (shown on page 252), book of instructions and tripod No. 7420each, \$62.50

Kolesch "Builders' Dumpy" Level, No. 7880

- 7880 Builders' "Dumpy" Level, for builders, architects and contractors. Telescope 12 inches long, magnifying power about 19 diameters. Objective $1\frac{1}{8}$ in. Dust cap and sun shade. Rack and pinion movement to objective. Adjustable eye-piece for focussing cross-hairs. Fine bubble ($4\frac{1}{2}$ in. vial) of 60 seconds sensitiveness, graduated on the glass attached to the telescope bar. Telescope bar and rings of an improved construction designed to produce a very strong instrument, which is not liable to get out of adjustment under the most severe conditions. Clamp and tangent screw. Weight of level without tripod about 5 lbs. Complete in finely polished box, with plumb bob, adjusting pins, metal trivet (shown on page 252) and tripod No. 7420 each, \$40.00

Dumpy Level.

The following instruments are of very simple construction, but, like the Architects' and Builders' Levels shown on the preceding pages, are well made, accurate leveling instruments, and will be found of great value to the builder, bricklayer, wheelwright, farmer, landscape gardener, etc.

- 7885 **Dumpy Level.** Telescope about 12 in. long, with adjustable eye-piece for focusing cross hairs, rack and pinion movement for focusing objective, dust cap, sun shade, graduated bubble to telescope. Complete in neatly polished box, with plumb bob, adjusting pins, hardwood tripod and metal trivet, each, \$35.00

- 7890 **Dumpy Level.** Telescope about 12 in. long, with adjustable eye piece for focusing cross hairs, rack and pinion movement for focusing objective, dust cap, sun shade, graduated bubble to telescope; horizontal circle 3 inches, divided to degrees, reading by a vernier (which is attached to the spindle) to 5 minutes. Horizontal circle is reversible for the purpose of setting the instrument at zero at any given point. Complete in neatly polished box, with plumb bob, adjusting pins, hardwood tripod and metal trivet (shown in cut above.)..each, \$40.00

Surveying Compass

Verschoyle Pocket Transit.

- A. Thumb Loop.
- B. Clamp for lifting the needle from contact with jewel when instrument is not in use.
- C. Press Pin, for bringing the needle to rest quickly when taking an observation.
- D. Face of Prism Box, showing aperture leading to compass and sight.
- E. Back of Prism Box, showing extension of back sight aperture.
- F. Graduated Vertical Arc.

This instrument was designed by a mining engineer of practical experience, and has met a ready sale among mining engineers and others who want a light, portable instrument for preliminary surveys. Its distinguishing feature is that, owing to its novel construction, only one observation is necessary to obtain both the magnetic bearing and the vertical angle of any distant point. It is also specially adapted for use in difficult positions, such as are always liable to occur in filling in the rougher details in a mining survey. For rapid topographical work and working in constrained positions, the fact that half the labor is saved should be of interest to those who have to use this class of instrument. Another important point is that its efficiency is not determined by the length of the diameter of the compass, as is the case with the ordinary Prismatic Compass. With even a small instrument the same length of sight is obtained as with a 6" or 7" Prismatic Compass. It is constructed to withstand hard usage. The engineer himself can make all necessary adjustments, which is another point in its favor.

To use the instrument for obtaining horizontal and vertical angles after freeing the needle and unfolding the arm, grasp the compass box in the left hand, and then with the extended fingers of the right hand lightly grasp the arm and bring the distant target or light to the intersection of the cross lines at the end of the arm. When holding the arm firmly in that position, with the left hand slightly revolve the compass box until the small level bubble is seen through the prism to be at the central mark. The magnetic bearing will now be plainly visible in the prism at the same time that the target is viewed along the sight line, and the angle of depression or elevation is automatically recorded in the vertical arc. Both readings can then be booked at the same time without further observation. To use the instrument as a clinometer lay the bottom side of the arm on the object to be observed, and looking through the window at the top of the compass box slightly revolve the box until the small bubble comes to its center. The angle may then be read off the vertical arc. When not in use always throw the needle off the point by the means provided and fold up the arms.

- 7920 Verschoyle Pocket Transit, $3\frac{3}{8}$ in., aluminum case, needle $2\frac{1}{2}$ in., compass to $\frac{1}{2}$ degrees, vertical arc to degrees. Weight about $9\frac{1}{2}$ ounces. In leather sling case each \$35.00
- 7922 Same as No. 7920, but with angle piece and collapsible metal tripod, ball and socket fitting each 44.00

Pocket Magnetic Compasses

Made by Short & Mason, England.

Best Quality, Stout Gilt Brass Box, Pull-off Cover.

- 7925 Pocket Compass, with enameled card dial, best hardened and tempered bar needle, with jeweled cap and stop, bevelled glass:
- | | | | |
|-----------|--------|--------|---------|
| | 1½ | 2 | 2½ inch |
| Each..... | \$1.50 | \$1.85 | \$2.25 |
- 7926 Pocket Compass, same as No. 7925, but with silvered untarnishable metal dial:
- | | | | |
|-----------|--------|--------|---------|
| | 1½ | 2 | 2½ inch |
| Each..... | \$1.90 | \$2.25 | \$2.65 |

- 7930 Pocket Compass, with enameled card dial, hardened and tempered edge bar needle, jewel cap and selfacting stop:
- | | | | |
|-------------------|--------|-------------------|--------|
| 1½ inch.....each, | \$2.65 | 1¾ inch.....each, | \$3.00 |
|-------------------|--------|-------------------|--------|
- 7932 Pocket Compass, same as No. 7930, but with silvered metal dial:

|-------------------|--------|-------------------|--------|
| 1½ inch.....each, | \$3.50 | 1¾ inch.....each, | \$4.00 |
|-------------------|--------|-------------------|--------|

Pocket Magnetic Compasses

Made by Short & Mason, England.

- 7935 Pocket Magnetic Compass, strong bronzed metal case with jointed lid, silvered metal dial, best hardened and tempered edge bar needle:

1½ inch.....each, \$4.50 2 inch.....each, \$6.00

Night Hawk Compass

With luminous dial,
visible at night.

- 7937 Night Hawk Compass, 2 inch, with graduated aluminum dial, luminous center, and movable bezil upon which a marching line is painted. The slot in the ring serves as one sight, and a glass with hair line, in lid serves as the other. By sighting through the slot in the ring so that an object is bisected by the line on the glass, the true magnetic bearing of the object can be read on the dial, and the march directed accordingly. Bronzed caseeach, \$11.25

- 7938 Same as No. 7937 in solid leather sling case with loop for belteach, 14.00

Sight Compasses

Made by Short & Mason, England.

- 7940 Sight Compass, bronzed metal case with cover, untarnishable silvered metal dial, tempered bar needle and folding sights:

	2	2½	3 inch
Each.....	\$6.00	\$7.20	\$8.75

- 7942 Bridge Sight Clinometer Compass, 3 inch, can be used as a sight compass, or as a clinometer for taking angles of inclination. Bronzed case, silvered metal dial, hardened and tempered edge bar needle, jeweled center, in leather flap caseeach, \$10.75

Prismatic Surveying Compass

Made by Short & Mason, England.

- | | | |
|------|--|---------|
| 7944 | Prismatic Compass, 2 inch, card dial, jeweled center, folding sights, in morocco case.....each, | \$15.50 |
| 7945 | Prismatic Compass, 3 inch, card dial, jeweled center, folding sights, in solid leather sling case.....each, | 19.50 |
| 7946 | Same as No. 7945, with azimuth shades and mirrors, in solid leather sling case.....each, | 26.00 |
| 7947 | Prismatic Compass, 4 inch, card dial, jeweled center, folding sights, in solid leather sling case.....each, | 23.25 |
| 7948 | Same as No. 7947, but with azimuth shades and mirrors, in solid leather sling case.....each, | 31.00 |
| 7949 | Metal Collapsible Tripod for Prismatic Compasses Nos. 7944-7948, with ball and socket motion. Opens to 53 inch, closes to 16½ inch. Weight 2 lbs.....each, | 13.50 |

Prismatic Surveying Compass and Clinometer

Made by Short & Mason, England.

This instrument, when used as a prismatic compass, is placed in a horizontal position, the altitude and clinometer dial being fixed to the stop so that the compass divisions are rendered visible through the opening, and can be used with the prism in the usual manner. As an altitude instrument it is placed in a vertical position, as illustrated, the stop being pulled up or released. The altitude arc then swings, and its divisions come into line with the prism and metal sight line. When applied as an ordinary clinometer, the readings are observed through the opening, which corresponds to the position of the clinometer base.

"A" is the prism box; "B" is the sighting line; "C" is the altitude arc; "D" is the stop for locking clinometer; "E" is the clinometer scale.

7950 Prismatic Surveying Compass and Clinometer, 3 inch, with floating card compass dial, jeweled center, clinometer scale graduated 0° - 180° with scale of rise and fall of inches per yard, folding prism and metal sight, bronzed metal case. In solid leather sling case.....each, \$34.00

7952 Same as No. 7950, but compass fitted with aluminum ring and metal altitude clinometer dial.....each, \$48.00

Service Pattern Clinometer

Made by Short & Mason, England.

DESCRIPTION.

The instrument is used in military operations for measuring angles of elevation or depression. It is also of great service in the question of transport of guns and stores, as by knowledge of the dip or rise in a hill the officer will know whether he has sufficient horse power to draw the load and can provide for the proper amount before starting.

INSTRUCTIONS FOR USE.

It should be held in the left hand and in a vertical position, allowing light to pass through the window "A" to illumine the arc scale which is made of ivory. This scale is held clamped, and by pressing the knob "B" it is released and swings freely until it comes to rest.

The pressure should be retained on the knob until the observation is made. When pressure is removed the arc is at once clamped. A sliding lock bolt is shown at "C," which will secure the arc from any risk of swinging when not required.

The sight through the clinometer should be taken by directing the eye through the sight hole at "D," through the small window at "E," upon the object to be observed; the graduations upon the arc "F" will then be seen reflected in the mirror "G" and the angle can be seen at a glance.

The scale of the arc shows 0° - 45° in each direction; the RED scale denotes elevation, the BLACK scale depression.

The loop at "H" is for a short strap to pass around the wrist for security, or for a long strap for shoulder sling.

The upper part of the metal case is made to remove for the purpose of cleaning mirror, etc., and is fitted on the body only tight enough to hold, but can easily be removed.

7954 Service Pattern Clinometer, 3 inch, as described and illustrated above, in leather sling case..... \$21.50

Cross Staff Heads

Made by Short & Mason, England.

- | | | |
|------|---|--------|
| | | each. |
| 7956 | Cross Staff Head, $2\frac{1}{4}$ in., octagonal, with staff socket, in case.. | \$4.00 |

| 7962 | Angle Mirror, for right angles, plain, in case..... | 5.00 |

Miners' Compass or Dipping Needle

Made by Short & Mason, England.

In the hands of the prospector the Miners' Compass or Dipping Needle proves a serviceable guide to the discovery and location of magnetic iron ore. In this instrument the magnetic needle is carefully balanced upon a horizontal axis within a graduated circle, and in which the needle will be found to assume a position inclined to the horizon. This angle of deviation is called the inclination or dip, and varies in different latitudes, and even at different times in the same place. Hence, in reading the needle for the suspected presence of magnetic iron ore, the observer must not only be governed by his instrument, but must also draw into requisition his knowledge of the general geological formation of the place of his survey; and depending on his experience,

he will be enabled to approximate as to the probable mass and the depth of the ore from the surface. When used for tracing ore the observer should hold the ring in his hands and keep the needle north and south, standing with his face to the west. The inclination of the needle as read off on the graduated scale will show the dip. If the compass is held horizontally it serves as an ordinary compass.

- 7965 Dipping Needle, 3 inch, Norwegian pattern, needle gimballled having a motion in azimuth as well as in altitude, in velvet lined caseeach, \$20.00

- 7967 Dipping Needle, 3 inch, in velvet lined case.....each, \$12.00

Abney Hand Levels

Made by Short & Mason, England.

For obtaining the height of buildings, trees or any other object, also for setting out gradients for railway, drainage or mining purposes.

- 7970 Abney Hand Level, 5 inch, German Silver Arc with vernier reading to 10', clamping device to vernier and draw telescope, in leather sling case.....each, \$15.00

- 7972 Abney Hand Level, 5 inch, with circular rotating base, German Silver Arc with vernier reading to 10', clamping device to vernier, draw telescope, compass with bar needle, and staff socket, in leather sling case.....each, 24.00

Hand Levels

- each.
 7975 Locke's Hand Level, 5 in. long, German silver, in leather case, \$7.50
 7977 Locke's Hand Level, 5 in. long, nickel plated, in leather case... 5.90
 7979 Locke's Hand Level, 5 in. long, bronzed, in leather case..... 5.00

- 7980 Square Hand Level, in leather case.....each, \$4.00

- 7982 Stadia Hand Level, 10 in., fixed stadia hairs, aperture of object glass, 1 in., with ball and socket joint, in leather sling case.....each, \$18.00

Rod Level

A convenient tool for determining whether the rod is held in a perpendicular position. Can be clasped against the rod by holding the two in the hand, or can be attached to the rod by a screw provided for this purpose.

- 7985 Rod Level, metal, round level vial, 1 inch in diameter.
 Each \$3.00

Surveying Aneroid Barometers

Made by Short & Mason, England.

Compensated for Temperature.

Especially designed and constructed for readily ascertaining slight variations in heights, levels, etc.

Stout bronzed metal case, silvered metal dial, vernier scale with rack movement, magnifying glass arranged to traverse the entire circle. Each in solid leather sling case.

8004	Surveying Aneroid, 3 inch, altitude scale 6,000 ft., vernier to 2 ft.	each, \$63.00
8005	Surveying Aneroid, 3 inch., altitude scale 10,000 ft., vernier to 2 ft.	each, 65.70
8006	Surveying Aneroid, 3 inch, altitude scale 12,000 ft., vernier to 2 ft.	each, 67.50
8011	Surveying Aneroid, 5 inch, altitude scale 5,000 ft., vernier to 2 ft.	each, 68.00
8013	Surveying Aneroid, 5 inch, altitude scale 6,000 ft., vernier to 1 ft.	each, 68.00
8014	Surveying Aneroid, 5 inch, altitude scale 10,000 ft., vernier to 2 ft.	each, 70.70
8016	Surveying Aneroid, 5 inch, altitude scale 12,000 ft., vernier to 2 ft.	each, 72.50

Mining Aneroid Barometers

4,000 ft. ascent and 2,000 ft. descent.

8018	Mining Aneroid, 3 inch, vernier to 2 ft., in solid leather sling case	each, \$63.00
8019	Mining Aneroid, 5 inch, vernier to 1 ft., in solid leather sling case	each, 68.00

Aneroid Barometers

Made by Short & Mason, England.

Pocket Size. Best Quality.

Compensated for Temperature. Gold Plated Cases. Metal Dials.

- | | | |
|------|---|---------------|
| 8021 | Aneroid Barometer, $2\frac{1}{2}$ in., altitude scale 5,000 feet, 20 ft. divisions | each, \$21.35 |

| 8024 | Aneroid Barometer, $2\frac{1}{2}$ in., altitude scale 12,000 ft., 50 ft. divisions | each, 22.20 |
| 8028 | Aneroid Barometer, $2\frac{1}{2}$ in., altitude scale 16,000 ft., 100 ft. divisions | each, 23.80 |
| 8029 | Aneroid Barometer, $1\frac{3}{4}$ in., altitude scale 5,000 ft., 20 ft. divisions | each, 20.10 |
| 8031 | Aneroid Barometer, $1\frac{3}{4}$ in., altitude scale 8,000 ft., 50 ft. divisions | each, 19.25 |
| 8032 | Aneroid Barometer, $1\frac{3}{4}$ in., altitude scale 12,000 ft., 100 ft. divisions | each, 20.95 |
| | Above in morocco cases, leather sling cases, extra, | \$2.10. |

Watch Form Aneroid Barometers—II Quality

Compensated for Temperature. Gold Plated Cases. Silvered Metal Dials.

- | | | |
|------|--|---------------|
| 8043 | Pocket Aneroid, $1\frac{3}{4}$ in., altitude 8,000 feet, in 100 ft. div., in morocco case. | each, \$13.50 |
| 8046 | Pocket Aneroid, $1\frac{3}{4}$ in., altitude 12,000 ft., in 100 ft. div., in morocco case | each, 15.20 |
| 8048 | Pocket Aneroid, $1\frac{3}{4}$ in., altitude 16,000 ft., in 100 ft. div., in morocco case | each, 16.80 |

II Quality Barometers are marked with letter B on dial between Fig. 23 and 31.

Watch Form Barometers—III Quality

Gold Plated Cases, $1\frac{3}{4}$ in. diameter. Silvered Metal Dial.

- | | | |
|------|--|--------------|
| 8049 | Pocket Aneroid, altitude 8,000 ft., in 100 ft. divisions, in morocco case | each, \$9.00 |
| 8051 | Pocket Aneroid, altitude 10,000 ft., in 100 ft. divisions, in morocco case | each, 9.85 |

III Quality Barometers are marked with letter C on dial between Fig. 23 and 31.

Anemometers or Air Meters

Made by Short & Mason, England.

Biram's Pattern.

For registering the velocity of air currents in mines, tunnels, flues of furnaces, sewers, shafts, etc.

With jeweled movements, zero setting device and chart of corrections.

		In Leather Case	In Leather Sling Case
8054	Biram's Anemometer, 3 inch, 2 dials reading to 1,000 feet	\$25.00	
8055	Biram's Anemometer, 4 inch, 4 dials reading to 100,000 feet	28.00	\$32.75
8056	Biram's Anemometer, 6 inch, 4 dials reading to 100,000 feet	35.00	40.75
	No. 8054 will stand a pressure of 1,000 feet per minute.		
	Nos. 8055 and 8056 will stand a pressure of 3,000 feet per minute.		

High Speed Anemometers

Constructed for very strong blasts up to 8,000 feet per minute.

- 8058 High Speed Anemometer, 3 dials, similar to above, registering to 200,000 feet, with disconnecter and zero setting attachment, in leather case, with chart of corrections..each, \$45.00

Anemometers not guaranteed accurate when used in a temperature exceeding 300° Fahrenheit.

Anemometers or Air Meters—Continued

Made by Short & Mason, England.

8061

8063

- 8061 **Biram's Pocket Anemometer.** Extra strong construction, 2 inch. Two dials reading to 1,000 feet. Weight $5\frac{1}{2}$ ounces. In leather case.....each, \$40.00
- 8063 **Portable Anemometer,** $2\frac{1}{2}$ inch, 4 dials reading to 100,000 feet, with disconnecter and zero setting device, in case....each, 30.00
- 8064 Same as No. 8063, but 6 dials reading to 10,000,000 feet...each, 30.00
Sand Glass Timers attached to Nos. 8063 and 8064....extra, 3.75

Anemometers or Air Meters

ROBINSON'S IMPROVED PATTERN.

Made by Short & Mason, England.

The improvement consists, first, in a rearrangement of the works which admits of the column carrying the arms and cups, rising from the *center* of the base, and secondly, an arrangement by which the enumeration is affected by two hands which can be set to zero on the commencement of an observation, thus obviating the necessity of taking a reading of the dials before proceeding to make a fresh observation.

Another improvement is the recent introduction of ball-bearings to the central shaft by which the friction is reduced to a minimum and the wearing of the instrument prevented.

8071 Robinson's Anemometer as above, with 3 inch cups, reading
to 500 miles, complete.....each, \$45.00

The Portable Current Meter.

This instrument is constructed and used for the measurement of *rate* or *flow* of small rivers and streams, also for the flow of *tides*.

For this purpose the meter should be placed in the stream, as per directions supplied, and allowed to run for a given time. The rate of the stream per unit time is then shown by reference to the graduations of the circles which are actuated by the force of the water upon the Fan-screw. The value of the graduation is as follows:

1. The inner circle, graduated to show 8 miles in a revolution.
2. Each mile, subdivided into 8 parts, showing *furlongs*.
3. Each furlong graduation, subdivided into 3 parts, equal to 220 feet each.
4. The outer circle, graduated to show *single feet*, and a complete revolution 220 feet.

The circles *B* are attached to a movable arm, which throws the endless screw in or out of gear. This arm can be raised by turning the screw which passes through the coil spring *E*, which would *fix* the gearing for constant use. It can also be raised by pulling the cord *D* after the meter is submerged in the stream at the instant of a given time, and also released at the expiration of the given time.

The meter can also be used for determining the *quantity* of water flowing from a reservoir or tank.

For this purpose, it is necessary to know accurately the area of the channel or tube through which the water is passing and the meter to be placed within it. Then the volume of water passing per minute is shown in cubical feet by multiplying or dividing (according to area of tube) the area of the tube by the rate per minute as shown by the meter.

8078 Portable Current Meter, complete, in mahogany case.....each, \$55.00

Current Meters—Continued

- 8081 Current Meter, with 2 graduated wheels registering to 1,000 revolutions, with eccentric lever, operated by strings, for engaging or disengaging. Propeller, 5 in. diameter, with agate and ball-bearing axis. Detachable metal rudder, 7x3 inches. Can be attached to any convenient pipe or pole about 1 inch diameter and fastened on same, either in a fixed or a swiveling position, by means of the set screws. In finely polished wooden case.....each, \$77.00
- 8083 Current Meter, pocket size; similar in construction to No. 8081, but with propeller, 3 inches diameter, and without rudder; size of pole required about $\frac{3}{4}$ inch diameter; in morocco case, 9x4x1 $\frac{1}{2}$. Small, neat and compacteach, \$45.00

Rain Gauges

Made by Short & Mason, England.

- 8086 Selfregistering Rain Gauge, 2 dials, zero setting, registers 1/100 of an inch up to 12 in. In japanned metal case, 8x10, with directions.....each, \$30.00

- 8087 Same as No. 8086, but in copper case.....each, 37.00

8091

8098

- 8091 Glaisher's Rain Gauge, japanned metal receiver, 8 inch diameter, funnel with brass rim terminating in curved tube which prevents evaporation by retaining a small portion of water. Receiver is sunk into the ground within 8 in. of the top, preventing all evaporation even in the warmest season... each, \$7.50
- 8093 Same as No. 8091, made of copper with brass rim.....each, 15.25
- 8098 Howard's Rain Gauge, glass bottle with japanned funnel with brass rim, 5 inch diameter, graduated glass measure to show .01 of an inch of rainfall.....each, 3.25
- 8099 Same as No. 8098, but with copper funnel with brass rim each, 4.65
Extra Graduates reading to .01 for Nos. 8091 and 8093..each, 2.00
Extra Graduates reading to .01 for Nos. 8098 and 8099..each, 1.00

Thermograph or Recording Thermometer

Made by Short & Mason, England.

- 8101 Thermograph. Cast metal base, hinged copper lid. Exposed lamina insuring perfect circulation of air around it, being sufficiently distant from the case as to be unaffected by the metal. With patent clock and 6 inch certified thermometer for purpose of comparison. Furnished with charts not figured and can be supplied with charts figured for 75°, 150° or 300° F. range....each, \$50.00

- 8103 Thermograph, with iron base and copper hinged case. High drum. With 8 day cylinder clock with charts ranged from -62° to +128° F. With recording lamina inside. Can be supplied with charts showing ranges of 75°, 150° or 300° F. With certified thermometereach, \$50.00

Pocket Thermometers

- 8105 Pocket Thermometer, in polished case, $4\frac{1}{2} \times 1\frac{1}{4}$ in.....each, \$1.75
 8107 Pocket Thermometer, 5 inches long, in rubber case..... " .85
 8109 Pocket Thermometer, 4 inches long, in metal case..... " .50

Stormograph or Recording Barometer

Made by Short & Mason, England.

- 8110 Stormograph. Simplified in form, in glass case with metal frame. With clockwork revolving the drum and charts one complete revolution in seven days. The barometrical changes are effected by a large vacuum pan concealed in the base of the instrument. Complete with charts...each, \$40.00

- 8111 Stormograph, in metal frame, with beveled plate glass top and sides. Drawer for holding used and unused charts. Complete, with seven day clock and charts.....each, \$63.00

"Fulton" Pocket Target

(Patented)

Illustration $\frac{1}{2}$ size.

A handy and useful article for locating or sighting the line from which the plumb bob is suspended over a given point. Made of White Celluloid on one side and red on the other, circular in form with a diamond-shaped cut out which offers a strong contrast against the white body of the target and through which the plumb bob line is easily sighted from the instrument at very long distances.

Convenient to carry in the pocket, readily attached or detached by means of the slots (see cut) and can be easily raised or lowered at will.

Will be appreciated when sighting in dark or shady places or towards dusk when the light is failing. In such cases a lighted match held behind the cut out will enable the transit man to quickly locate the line.

Useful in crowded city streets where the operator can, without any effort, hold the target over the heads of passing pedestrians who are liable to obstruct the view.

Extremely serviceable for use in the country where sights are constantly taken with shrubs or foliage as a background making the plumb bob line indiscernible at long distances.

More convenient and more accurate than a flag or sighting pole with its accompanying "waving of the pole" to set same plumb.

Philadelphia Leveling Rods, Improved Construction

Nos 8117-8124

Nos. 8129-8134

Front Target

Rear Target

For description and prices see opposite page.

Philadelphia Leveling Rods

Improved Construction.

Made from selected quarter sawed maple, carefully air seasoned and kiln dried. Prepared with five coats of pure white, weatherproof paint which will not turn yellow with age. The graduations are stamped with steel dies by a machine which stamps ten feet at one impression, thereby insuring great accuracy. After being graduated the rods are finished with four coats, rubbed, of the highest grade of weatherproof transparent varnish.

The front targets are made of hard cast bronze and equipped with an improved screw which cannot be lost. The screw is threaded on the inside and sets over the lug attached to the brass clamping spring, which is also threaded. A sleeve riveted to the target screw, between the ribs on the back of the target, prevents any lateral motion and makes it impossible to lose the screw.

The rear targets are provided with a large thumb screw which tightens the clamp spring on the inside and is threaded into the body of the target. This gives a very quick and positive clamp and does away with the possibility of losing or bending the screw.

DIVIDED: Feet, 10ths and 100ths; Vernier reading to 1,000ths.

Figures for the 10ths are 5/100ths high:

8117	Heavy Philadelphia Rod, 7 ft. extending to 13 ft.....each,	\$15.00
8119	Light Philadelphia Rod, 6½ ft. extending to 12 ft.....	" 13.00
8121	Trolley Size Philadelphia Rod, 5 4/5 ft. extending to 10½ ft.....	" 13.00
8123	Mining Philadelphia Rod, large, 5 ft. extending to 9 ft....	" 12.00
8124	Mining Philadelphia Rod, small, 3 ft. extending to 5 ft....	" 11.40

DIVIDED: Feet and 10ths; Vernier reading to 100ths.

Figures for the 10ths are 6/100ths high and the lines of the figures 1/100th wide. The rod can therefore be read to 1/100ths without using the vernier.

8129	Heavy Philadelphia Rod, 7 ft. extending to 13 ft.....each,	\$15.00
8131	Light Philadelphia Rod, 6½ ft. extending to 12 ft.....	" 13.00
8133	Mining Philadelphia Rod, large, 5 ft. extending to 9 ft....	" 12.00
8134	Mining Philadelphia Rod, small, 3 ft. extending to 5 ft....	" 11.40

Separate Targets for Above Rods.

8143	Front Targets for Philadelphia Rods.....each,	\$5.00
8144	Rear Targets for Philadelphia Rods.....	" 2.50

For additional rods see following pages.

Leveling Rods—Continued

- 8158 "California" Leveling Rod, engine divided, with target, vernier, and clamp, 7 ft. long, extending to 13 ft. Divided to feet, 10ths and 100ths, with vernier reading to 1,000ths. Divisions are thin black lines (engine divided) on a white painted background, allowing a very accurate reading of the 100ths and a corresponding accuracy in reading the vernier.....each, \$15.00
- 8161 "New York" Rod, with target, vernier and clamp, 6½ ft. long, extending to 12 ft. Divided to feet, 10ths and 100ths, with vernier reading to 1,000ths.....each, 14.00
- 8163 "Boston" Rod, mahogany, with clamp and target, vernier at both ends. Divisions are engine divided on boxwood inlaid on the mahogany stock. 6½ ft. long, extending to 11 ft., each, 14.00
- 8165 "Stadia" Rod, designed by Lieut. Alfred G. Noble, U. S. A., one of the pioneers in the use of the Stadia Rod, and used by him in the construction of the N. Y. State Barge Canal. Made of hardwood, 6 ft. long, opening to 12 feet. With strong hinge and brace to hold in position when opened.....each, 9.00

Metric Rods

- 8171 Metric Rod, similar to No. 8131, 2 meters long and extending to 3.7 meters.....each, 13.00
- 8173 Metric Rod, similar to No. 8129, 2.2 meters long, extending to 4 meters.....each, 15.00

Builders' and Architects' Rods

- 8180 Builders' Rod, maple, with target, vernier and clamp. 5 ft. long, extending to 10 ft. Divided to feet, inches and 8ths, with vernier reading to 64thseach, 6.00
- 8182 Same as No. 8180, but divided to feet, 10ths and 100ths, with vernier reading to 1,000ths.....each, 6.00

Chicago Leveling Rods

- 8216 Chicago Leveling Rod. Style A, divided to feet, 10ths and 100ths. In three sections. Nickel plated socket constructed so as not to obstruct the view. Graduations painted on the rod. In canvas sack. Length, 12½ feet..... 11.25
- 8218 Chicago Leveling Rod, Style B. Divided to feet and 10ths, otherwise same as No. 8216..... 11.25
- 8220 Chicago Leveling Rod, Style C. Divided to feet, inches and 8ths, otherwise same as No. 8216..... 11.25

Chicago Rod Ribbon

Made of Paper Cloth, can be folded up and carried in the pocket. For use they are attached to any convenient strip of wood.

- 8232 Style A }
8234 Style B } in lengths of 12½, 16½ and 20½ feet.....per foot, \$.10
8236 Style C }

Ranging or Flag Poles

- 8302 Ranging Poles, of best seasoned wood with metal shoe. Octagonal, tapered, painted red and white alternately every foot.
- | | | | |
|-----------|--------|------|-------------|
| | 6 | 8 | 10 ft. long |
| Each..... | \$2.00 | 2.25 | 2.50 |
- 8303 Ranging Poles. **Tubular Iron**. $\frac{7}{8}$ in. diameter, painted red and white, alternately every foot.
- | | | | |
|-----------|--------|------|-------------|
| | 6 | 8 | 10 ft. long |
| Each..... | \$2.75 | 3.00 | 3.50 |
- 8304 Ranging Poles. **Solid Steel**. Octagonal, $\frac{1}{2}$ in. diameter, painted red and white, alternately every foot. The points are hardened and drawn out of solid steel.
- | | | | |
|-----------|--------|------|-------------|
| | 6 | 8 | 10 ft. long |
| Each..... | \$2.75 | 3.00 | 3.50 |

Surveyors' Bags

For Carrying Field Utensils, Such as Field Books, Tapes,
Plumb Bobs, Hatchets, Etc.

- 8401 "Field Book" Bag, made of Heavy Russet Leather, carefully sewed. For carrying field books, tapes, etc., 8x10 inches with 2 pockets and shoulder strap.....each, \$2.50

8403

8408

- 8403 Surveyors' Bag, Large, fine quality and very durable; made of Solid Russet Leather, carefully sewed. 22 inches long; 9 inches wide; 9½ inches high. With shoulder strap....each, 7.50
- 8405 Surveyors' Bag, Medium, same as No. 8403, but 19½ inches long; 8½ inches wide; 9 inches high..... " 6.50
- 8407 Surveyors' Bag, Small, same as No. 8403, but 17½ inches long; 7½ inches wide; 8 inches high..... " 5.90
- 8408 Surveyors' Bag, made of Heavy White Cotton Duck, with Grain Leather Base. Hand made frame and heavy strap handles. Designed for heavy service, 14 in. long..... " 4.35

Surveyors' Bush Knife or Machete

- 8410 Surveyors' Bush Knife, leather handle, blade 17 in. long...each, \$1.25
 8415 Surveyors' Bush Knife, leather handle, blade 22 in. long... " 1.50
 8417 Sole Leather Sheath, for 8410 or 8415..... " .95

Surveyors' Belt

For carrying Nos. 8410 and 8415 in Sheath; also for attaching
 Plumb Bob Sheaths No. 8340.

- 8418 Surveyors' Belt, made of strong leather, adjustable buckle
 with nickel plated clasp.....each, \$.75

Surveyors' Bush Hook

- 8420 Surveyors' Bush Hook, best quality, long handle, 3½ lbs...each, \$1.50

Surveyors' Stake Hatchet

- 8422 Surveyors' Stake Hatchet, best quality, 2 lbs., with 17 in.,
 handleeach, \$.75
 8423 Surveyors' Stake Hatchet, best quality, 2½ lbs., with 20
 in., handle " .85

Stake Tacks and Mining Spads

8425

8426

8427

- 8425** Galvanized Stake Tacks, $\frac{3}{4}$ in. long, with depression in head for setting plumb bob or lining pole quickly and accurately.
 2 oz. box 3 lb. box 5 lb. box 10 lb. box
 \$.15 1.25 1.50 2.50
- 8426** Brass Stake Tack, 1 in. long, $\frac{1}{16}$ in. diameter, with oval head.
 1 lb. box 5 lb. box 10 lb. box
 \$.75 3.50 6.00
- 8427** Mining Spads, Galvanized, 2 in. long, for suspending plumb bobs from timbers in mines, shafts or tunnels. per gross, \$1.50 per doz., \$.15

- 8430** Timber Scribes or Tree Markers:
 Eachsmall, \$1.00 large, \$1.25

- 8440** Field Book Ruler, transparent and flexible, length 6 inches, designed expressly for Civil Engineers, for the purpose of recording field notes and for use in drafting room.
 per doz., \$2.25.....each, \$.20
- 8442** Same as No. 8440, but divided 100 parts to the foot on one edge and 10 parts to the inch on the other.....per doz., \$2.25 each, \$.20
- 8444** Same as No. 8440, but divided for Architects and Mechanical Engineers with scales $\frac{1}{8}$, $\frac{1}{4}$, $\frac{1}{2}$, 1 in. to the ft. per doz., \$2.25 each, \$.20

Repair Outfits for Tapes

- 8460 Repair Outfit, for mending steel tapes, including 1,000 eyelets, each, \$4.00
 8462 Extra eyelets for above, per 1,000..... 1.25

Directions: Punch a hole in the first piece of tape, leave same in position on the die; hold the second piece of tape over the first and after matching the divisions punch a hole in this second piece. Release the two pieces, insert an eyelet on the loose pin and clamp lightly, just enough to hold the two pieces together. Swing the two pieces apart and punch the second hole in the same manner, one piece at a time. Then insert second eyelet and clinch both eyelets. Although the punch will perforate two pieces of thin steel tape at once, it will be safer, and it will add to the life of the punch to proceed as described, by punching only one thickness of tape at one time. The holes can be cut near the edge of the tape, without any danger of splitting same, thus avoiding any chance of dirt collecting under the splice, or cutting the fingers when drawing the tape through the hands. Five minutes is the average time required to make a repair. They are in use in all of the principal engineering offices in the country.

Separate Parts for Repair Outfit No. 8460.

Little Giant Tape Splice

An exceedingly useful device for making temporary repairs of broken tapes, thereby saving delay in the work. When a tape breaks, the broken ends are inserted into the splice, adjusted by the sight hole, and by turning down screws with a knife blade, tape is ready for use. Will not catch on obstructions and holds against strongest pull.

- 8470 Little Giant Tape Splice, to fit $\frac{1}{4}$ in. or $\frac{3}{16}$ in. tapes 3 for \$1.00 each, \$.35
 8472 Little Giant Tape Splice, to fit $\frac{3}{8}$ in. tapes..... 3 " 1.00 " .35

Eureka Tape Splice.

Consists of thin sheet metal folded in the shape of a sleeve and coated with a combination of solder and flux so sensitive that it will make a perfect adhesion with the tape, by simply heating with a lighted match.

A neat and durable repair can be made in the field in a minute or less. Put up in small round wooden boxes with screw cover. Made in all widths to match the standard steel tapes. Directions with each box.

- 8474 Eureka Tape Splice... Per box of 1 doz., \$.50 per box of $\frac{1}{2}$ doz., \$.30
 In ordering please state width of tape for which splices are wanted.

Attachments for Steel Tapes

Tapes with U. S. Government Certificates

Can furnish any of the steel tapes listed in the following pages with a certificate of accuracy attested by the Bureau of Weights and Measurements at Washington, D. C., at an additional cost of..... \$1.25

For the convenience of our customers and to save the delay of sending tapes to Washington, we carry in stock 50 and 100 ft. tapes $\frac{1}{4}$ in. wide (of all the principal numbers listed in the following pages) with the U. S. Government certificate.

"Eckel Tape Reel"

The Most Practical and Most Serviceable Tape Reel Ever on the Market.

"Eckel Tape Reel," named after F. Eckel (our predecessor in the manufacture of Surveying Instruments), who originally designed and manufactured this reel. Made of hard aluminum alloy, with leather strap. Very strong and very durable.

With Steel Tape $\frac{1}{4}$ in. Wide.

Divisions begin at extreme end of tape.

- | | | | |
|------|---|---------|------------------|
| 8490 | "Eckel Reel" with Lufkin Steel Tape, 50 ft..each, | \$10.50 | 100 ft., \$14.50 |
| 8491 | "Eckel Reel" with Eddy Steel Tape, 50 ft. " | 11.50 | " 17.00 |

With Steel Tape $\frac{3}{16}$ in. Wide.

Divisions begin at extreme end of tape.

- | | | | |
|------|---|---------|------------------|
| 8492 | "Eckel Reel" with Lufkin Steel Tape, 50 ft..each, | \$10.50 | 100 ft., \$14.50 |
|------|---|---------|------------------|

"Eckel Reel" Only, Without Tape.

- | | | |
|------|--|--------|
| 8494 | "Eckel Reel" to fit 50 ft. steel tape of any standard width..each, | \$6.50 |
| 8495 | "Eckel Reel" to fit 100 ft. steel tape of any standard width.. " | 7.00 |

In ordering tapes with reel, please state whether 10ths or 12ths are desired.

In ordering reels Nos. 8496 and 8498, please state width of tape for which reel is desired.

"Lewis Ideal" Tape Reel

Patented April 8th, 1913

The Only Geared Tape Reel on the Market

The "Lewis Ideal" Tape Reel represents the highest development in tape reel design and construction. A perfect tape-winding machine that will save its cost in a few days' use and make chaining a pleasure instead of a drudgery. Now being used by leading municipal and railroad engineers throughout the country.

Made of hard aluminum alloy. Wearing parts of hard steel, handle of bronze. 5½ in. diameter, weight 10 ounces. With high-speed gearing, which will wind up 100 feet of steel tape in about 12 seconds (one-third of the usual time). Particularly desirable in city streets, where it is necessary to be able to wind a tape quickly in order to save same from being broken by passing vehicles.

Brake for stopping motion of tape at any point and holding it rigid without perceptible effort on the part of the operator. Valuable in winter, as it obviates the necessity of removing gloves.

Long Flush Folding Handle for making winding easy. Dustproof Gear Case and Automatic Cleaning Device. Frictionless large-diameter drum and improved arrangement for attaching tape. Provided with adjustable leather handle.

Complete with ¼ inch Steel Tape, 10ths or 12ths.

8497 "Lewis Ideal" Tape Reel with 100 ft. Eddy Steel Tape...each, \$17.50

8498 "Lewis Ideal" Tape Reel with 100 ft. Lufkin Steel Tape.. " 15.00

In ordering please mention whether 10th or 12ths are desired.

Reel Only, Without Tape

8499 "Lewis Ideal" Tape Reel, to hold 100 ft. Steel Tape, ¼ in. wideeach, \$7.50

Eddy Steel Measuring Tapes, Paine's Patent

- 8501 Paine's Patent Steel Tapes, $\frac{1}{4}$ inch heavy steel. Steel lined cases covered with russet leather. All trimmings nickel plated. Two finger rings with each tape. U. S. Standard, graduations begin at extreme end of tape. 10ths or 12ths:

	33	50	66	75	100 feet long
Each.....	\$5.50	8.00	10.00	12.00	15.00
English and meters, each..	6.50	9.50	12.00	14.25	18.00

- 8503 Paine's Patent Steel Tapes, $\frac{1}{4}$ inch heavy steel. Contained in steel cases covered with morocco and brass bound. Brass flush handles. Two finger rings with each tape. U. S. Standard, graduations begin at extreme end of tape. 10ths or 12ths:

	33	50	66	75	100 feet long
Each.....	\$4.50	6.00	8.00	10.00	12.00
English and meters, each..	5.50	7.50	10.00	12.25	15.00

Refills for Nos. 8501 and 8503.

	33	50	66	75	100 feet long
Each	\$3.30	5.00	6.60	7.50	10.00

In ordering, please state whether 10ths, 12ths or metric are desired.

Eddy Metallic Measuring Tapes

EDDY METALLIC TAPES, $\frac{5}{8}$ in. wide. Made of the best woven linen and contain metal threads to prevent stretching; are nicely finished, re-enforced on the first end with leather to prevent breaking and are as nearly waterproof as possible. Cases of heavy russet leather, fitted with flush handles and all metal parts nickel plated. Measurements begin at end of ring.

8505 Eddy Metallic Tapes, marked on one side only, 10ths or 12ths.

	25	50	66	75	100 ft. long
Each.....	\$1.75	2.50	3.00	3.50	4.00

In ordering please state whether 10ths or 12ths are desired.

Roe's Angle Tape and Roe's Steel Tape Chains

Mason Squaring Foundation with "Roe's Patent Angle Tape."

8522 Roe's Patent Angle Steel Measuring Tapes, $\frac{3}{8}$ inch steel. Hard leather case with nickel plated trimmings. 10ths or 12ths:

	25	50	75	100 feet long
Each	\$3.25	4.00	5.25	6.75

In ordering, please state whether 10ths or 12ths are desired.

This tape can be used for all kinds of measurements and also for laying out right angles much quicker than by any other method and equally accurate. Its principle is the old trigonometrical formula that 6, 8 and 10 ft. sides of a triangle secure a right angle. This form is embodied in the tape, by providing it at the 1, 9, 19 and 25 ft. marks with eyelets, the 9 and 19 ft. marks also with joints. To use the tape, fasten it at the starting point with a small marking pin or nail through the eyelet at figure 1 on tape; then fasten it at figure 9 as shown in illustration; place the 25 ft. mark over the starting point and taking hold of the tape at the 19 ft. mark pull it straight as shown in cut. You will then have a perfect right angle at the starting point. The advantages of this tape are obvious. A perfect right angle is obtained in a few minutes.

8524 Roe's Steel Tape Chains, 3-16 in. wide, on metal reel:

	50	100	200	300	500 feet
Plain	\$4.00	5.00	7.50	8.00	12.00
Nickel Plated	5.00	6.00	9.00	10.00	15.00
Aluminum Plated	5.50	7.00	10.50	12.00	18.00

Tapes 50, 100, 200 feet long, graduated every foot. End foot in tenths.
Tapes 300, 500 feet long, graduated every five feet. End foot in tenths.
Reels only, for 50 and 100 foot tapes.....each, \$1.50

Lufkin Steel Measuring Tapes
with
Instantaneous Readings

The "INSTANTANEOUS READING" as furnished on all Lufkin Steel Tapes listed in the following pages makes errors impossible and saves time. Consists of repeating the foot mark, in easily distinguishable figures, at each inch or 10th of a foot. Does away with all referring back to the last foot and the consequent errors and delays. The entire reading is always directly before the eye.

"Reliable Junior" Steel Tapes
with
Instantaneous Readings

"Reliable Junior" Steel Tapes, $\frac{1}{4}$ in. wide, with double folding flush handle opened by pressing small pin or button on opposite side. Hard leather cases. Nickel plated trimmings. U. S. Standard. Graduations begin at outer end of ring.

Complete, each	\$4.25	5.25	6.25	7.50	9.00

- 8608 "Lock Handle Frame," with Phosphor Bronze Tape, nickel plated, $\frac{1}{2}$ inch wide. Adapted for use in places where a steel tape is affected by gases, salt water acids, etc. **U. S. Standard.** Graduations begin at outer end of ring. Marked one side only, 10ths or 12ths.

50 feet, each..... \$8.00 100 feet, each.....\$13.50

In ordering please state whether 10ths or 12ths are required.

100 ft. tapes of above numbers supplied with a four arm piece.

Tapes marked metric measure on one side only at same price as corresponding length in feet.

Tapes marked feet in 10ths or 12ths on one side and metric measure on the other side, add 2 cents per foot to list price.

Lufkin Surveyors' Tape Chains

Method of Graduating

Surveyors' Tape Chains, $\frac{1}{4}$ inch wide, Heavy Steel, graduated every foot and end feet in one-tenths. Where the tape is graduated, the steel has a bright raised surface with the figures etched in. As the steel is of the finest quality and well tempered, the graduations and figures will not wear off, but will always be clear and distinct. Furnished in hardwood reel with large metal folding handle and two large detachable rings. Trim-mings nicely nickel plated. The frame and winding apparatus is strong, durable and compact. Tape is detachable. When tape is not in use the handles are fastened to the frame, where they will not get lost, and at the same time serve as a convenient handle for carrying the complete tape.

	100	150	200	300 ft. long

Lufkin Surveyors' Tape Chains—Continued

Folding Reel.

Reel Folded.

Surveyors' Tape Chains, as described on page 303. The reel has steel cross-arms, which keep the tape in place when winding or unwinding. When tape is in use and removed from the reel, the metal cross-arms of the reel fold into the wooden frame, so that even the large sizes can be conveniently carried in the pocket. The reel can be held firmly by running the hand through the strong leather loop fastened to the side of same. These reels are especially desirable for the larger tapes.

Lufkin Surveyors' Tape Chains

With Heavy $\frac{1}{8}$ Inch Steel Tape

Surveyors' Tape Chains, with heavy $\frac{1}{8}$ inch steel tape, hardwood frame with substantial sheet steel open reel. Large metal folding winding handle and two large detachable rings, which can, for convenience of carrying, be fastened to the frame when the tape is not in use. One side of the frame is provided with a large and convenient leather loop for holding. Tapes graduated same as described on pages 303 and 304.

Lufkin Surveyors' Tape Chains

Graduated on Babbit Metal

This Tape is to supply the demand for tape chains with graduations stamped on soft metal. Slightly heavier than the regular tape chains and guaranteed to be the best tape of this kind on the market. Graduations are stamped into the **Babbit Metal** at each foot, end feet in 10ths. Each tape provided with a pair of detachable rings or rawhide thongs as desired.

8653 Babbit Metal Tape Chain, 5/16 inch wide, tape only with rings.

	100	200	300	500 ft. long
Each	\$4.00	6.35	8.40	13.65

8656 Babbit Metal Tape Chain, 3/16 inch wide, tape only with rings.

	100	200	300	500 ft. long
Each	\$4.00	6.35	8.40	13.65

8658 Reel for above tapes, brass, nickel plated, with folding handle and rosewood grip, very strong and serviceable. For 100 feet tapes only. Larger lengths are usually desired without reel, each\$2.50

Lufkin Metallic Measuring Tapes

8661-8671

8673-8679

Lufkin Metallic Measuring Tapes, $\frac{5}{8}$ inch wide. Made of best woven linen and contain metal threads to prevent stretching. Are nicely finished and re-enforced on the first end with leather to prevent breaking. Are as nearly waterproof as possible. Cases of hard leather with double folding flush handle opened by pressing small pin or button on opposite side. All trimmings nickel plated. Graduations begin at outer end of ring.

Marked one side only, 12ths.

		25	33	50	66	75	100 ft. long
8661	Tapes in case, each	\$2.00	2.30	2.80	3.10	3.40	4.20

Lufkin Steel Pocket Tapes

Steel Pocket Tapes with Architects' Scales. Round edge nickel plated brass cases, spring wind with center stop. Tapes $\frac{1}{4}$ inch wide, graduated inches and $\frac{1}{16}$ ths on one side and Architects' Scales on the other.

- 8695 Length 60 inches, $\frac{1}{8}$ inch scale marked and numbered from O-480each, \$.85
- 8697 Length 60 inches, $\frac{1}{4}$ inch scale marked and numbered from O-240each, .85

Steel Pocket Tapes with Architects' and Engineers' Scales. Square edge German silver cases, spring wind and center stop. Graduated on one side full length consecutive inches, $\frac{1}{16}$ ths on bottom edge; centimeters and millimeters on top edge. Other side laid out in 12 inch sections, graduated on both edges and containing $\frac{1}{8}$, $\frac{3}{8}$, $\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{4}$, 1, $1\frac{1}{2}$ and 3 inch Architects' Scales with subdivisions. Also Engineers' Scales with 10, 20, 30 and 40 parts to the inch.

- 8698 Length 2 meters ($78\frac{3}{4}$ inches) $\frac{3}{8}$ inches wide, each\$3.00

Metric Conversion Steel Pocket Tapes. German silver cases, spring wind and center stop. Graduated on one side on bottom edge to inches and $\frac{1}{16}$ ths top edge in millimeters. Other side contains tables showing comparative values of English and Metric weights. Bottom edge being marked in kilograms, top edge in pounds, both properly subdivided. So arranged that one can determine the metric equivalent of an English weight or measurement and vice versa, without liability of error. Especially valuable to exporters, importers, forwarding agents, customs house officials, etc.

- 8699 Length 2 meters ($78\frac{3}{4}$ inches), $\frac{5}{16}$ inch wide, each\$2.50

Lufkin Artisan Steel Tapes

- 8700 **Artisan Steel Tapes**, $\frac{3}{8}$ inch wide, nickel plated cases, marked one side only in feet, inches and $\frac{1}{16}$ ths.

	8	12	15	20 ft long
Diameter	2	2	$2\frac{3}{8}$	$2\frac{3}{8}$ inches
Each	\$1.25	1.50	1.75	2.00

- 8705 **Artisan Steel Tapes**, same as No. 8700, divided one side in feet, inches, and $\frac{1}{16}$ ths; other side in millimeters.

	12 ft.=3 M.	15 ft.=5 M.
Each	\$1.80	2.10

- 8710 **Diameter Tapes**, $\frac{3}{8}$ inch wide, nickel plated cases, folding handle. These tapes are marked on one side in consecutive inches, other side with diameter graduations, enabling one, by measuring the circumference, to arrive at the exact diameter, as fine as $\frac{64}{1000}$ ths of an inch, of circular objects, such as pulleys, shafting, piping, columns, etc.

	8	12	15	20 ft. long
Each	\$1.50	1.80	2.10	2.50

- 8715 **Diameter Tapes**, same as No. 8710, but divided millimeters on one side and diameter measurements in metric on the other.

Length, 5 meterseach, \$2.10

- 8720 **Surveyors' Steel Pocket Tapes**, $\frac{1}{4}$ inch wide. German silver cases, spring wind with center stop. Graduated to inches and $\frac{1}{16}$ ths on one side; feet, $\frac{1}{10}$ ths and $\frac{1}{100}$ ths on the other.

	3	5	6	8 ft. long
Each	\$.80	1.10	1.20	1.70

- 8721 **Surveyors' Steel Pocket Tapes**, $\frac{5}{16}$ inch wide. German silver cases, spring wind with center stop. Graduated to feet, inches and $\frac{1}{16}$ ths on one side; feet, $\frac{1}{10}$ ths and $\frac{1}{100}$ ths on the other.

	10	12	18 ft. long
Each	\$2.35	2.70	3.50

- 8725 **Steel Pocket Tapes**, nickel plated cases, spring wind with center stop. Graduated inches and $\frac{1}{16}$ ths on one side, millimeters on the other.

	(1 meter)	($1\frac{1}{2}$ meters)	(2 meters)	($2\frac{1}{2}$ meters)
	36	60	72	96 inches
Each	\$.75	.85	1.00	1.40

Chicago Steel Tapes, 5/16 inch wide and 1/64 inch thick. Plainly marked and numbered at every foot, with the end divisions in 10ths. Graduations are marked on the hardest solder obtainable, by templates standardized to U. S. standard and guaranteed to be absolutely correct. Not so highly tempered as the regular steel tapes and therefore not easily broken. Furnished in metallic or in wooden reels. The latter can be folded up so that they can be conveniently carried in the pocket. Raw hide or metallic handles supplied with each tape. Graduations begin at end of tape. Furnished to order at short notice, with divisions beginning 6 inches from the end.

Bush Prism Binoculars, for Field and Marine Use

Prism Binoculars, for field and marine use. Adjustable for pupillary difference as well as for eye distance and focal distance. Body and cross-bars of one piece and the tubes are stationary, the hoods containing the eye-pieces sliding up and down. These features insure absolute and permanent alignment of the optical axis. Each binocular supplied with a sole leather, velvet-lined, hand-sewed carrying case with shoulder strap and adjustable strap attached to the glass.
